

LTC2606

16-Bit Rail-to-Rail V_{OUT} DAC with I²C Interface

DESCRIPTION

Demonstration circuit 812A features the **LTC[®]2606** 16-bit DAC with I²C interface. This device establishes a new board-density benchmark for 16-bit DACs and advances performance standards for output drive and load regulation in single-supply, voltage output DACs.

DC812A has many features for evaluating the performance of the LTC2606. Onboard 5V, 4.096V and 2.5V precision references are provided, and the LTC2606 may be powered by the 5V reference for evaluating rail-to-rail operation.

Another feature of this board is the onboard LTC2421 20-bit ADC for monitoring DAC output voltage. The 16ppm total error of this device is adequate for taking meaningful measurements of various LTC2606 parameters.

Design files for this circuit board are available at <http://www.linear.com/demo>

PERFORMANCE SUMMARY Specifications are at T_A = 25°C

SYMBOL	PARAMETER	CONDITIONS
Resolution		16 Bits
Monotonicity	V _{CC} = 5V, V _{REF} = 4.096V	16 Bits
Differential Nonlinearity	V _{CC} = 5V, V _{REF} = 4.096V	±1 LSB
Integral Nonlinearity	V _{CC} = 5V, V _{REF} = 4.096V	±12 LSB Typical
Load Regulation	V _{CC} = V _{REF} = 5V, Mid-Scale, I _{OUT} = ±15mA	2 LSB/mA Max

QUICK START PROCEDURE

1. Connect the DC812A to a DC590 USB serial controller using the supplied 14-conductor ribbon cable.
2. Connect the DC590 to a host PC with a standard USB A/B cable.
3. Run the QuikEval™ evaluation software supplied with the DC590 or download it from www.linear.com/software. The correct control panel will be loaded automatically.
4. Click the Collect button to begin outputting codes to the DAC and reading back the resulting output voltage.

Complete software documentation is available from the Help menu item, as features may be added periodically.

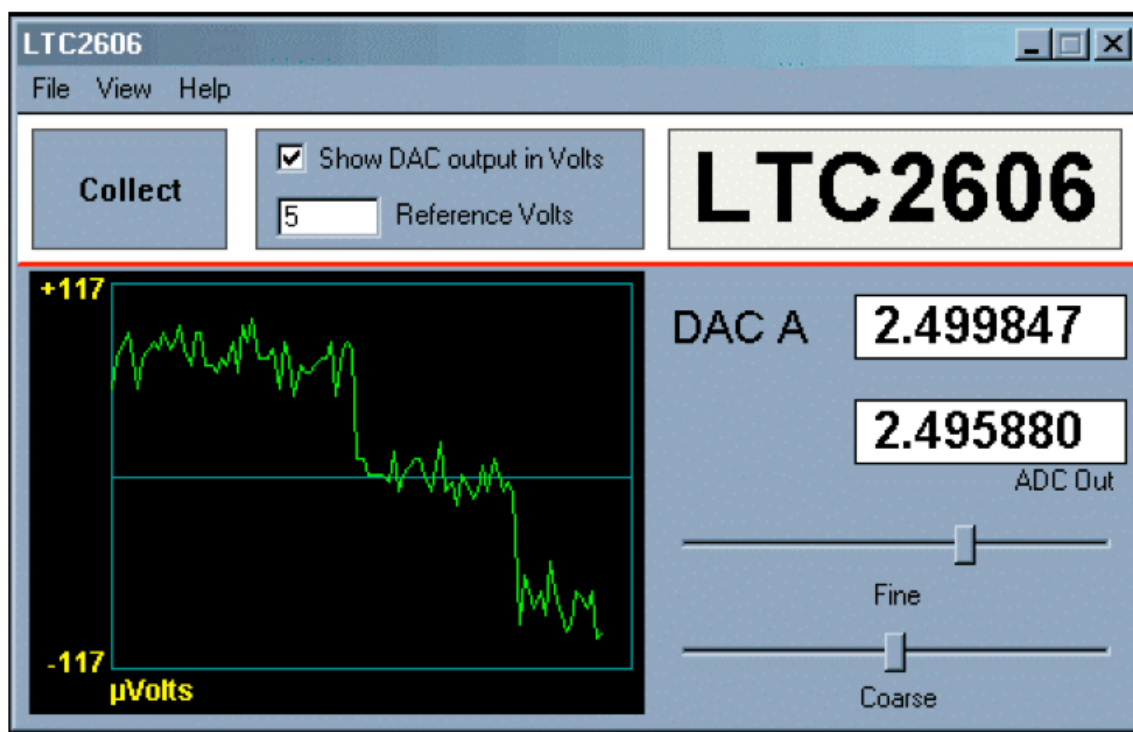

Figure 2. QuikEval Software

HARDWARE SETUP

JUMPER SETTINGS

V_{REF}: V_{REF} Select. Select 5V, 4.096V, or 2.5V reference. To apply an external reference through the V_{REF} turret, remove this jumper.

V_{CC}: V_{CC} Select. V_{CC} is taken either from the onboard 5V reference or the 5V regulated supply from the controller board. Selecting the 5V reference for both the V_{CC} jumper and V_{REF} jumper allows characterization of rail-to-rail operation of the LTC2606.

ADC: ADC Enable/Disable. Set to ENABLE for operation with DC590 serial controller. When using in customer's end application, the ADC can be completely disabled by setting jumper to DISABLE.

For very sensitive noise measurements when using LTC supplied software, set the output voltage and stop reading the voltage via the collect button on the control panel. This will stop the ADC from converting.

ANALOG CONNECTIONS

DAC V_{OUT}: LTC2606 Output.

V_{REF}: The V_{REF} turret is connected directly to the reference terminals of the LTC2606 and LTC2421 ADC. When one of the onboard references is being used, the reference voltage may be monitored at this point. An external reference may also be applied to this turret after removing JP1.

GROUNDING AND POWER CONNECTIONS

Power (V_{CC}): Normally the DC812A is powered by the DC590 controller. V_{CC} can be supplied to this turret, however the power supply on the DC590 must be disabled! Refer to the DC590 Quick Start guide for more details on this mode of operation.

Grounding: Separate power and signal grounds are provided. Any large currents drawn from the DAC outputs should be returned to power ground. Also, if an external power supply is connected, power ground should be used. Signal ground is connected to the exposed ground planes at the top and bottom edges of the board, and to the two turrets labeled GND. Use signal ground as the reference point for measurements and connections to external circuits.

EXPERIMENTS

The following experiments are intended to demonstrate some of the outstanding features of the LTC2606. All can be performed using the onboard LTC2421 to monitor the DAC output voltage. The indicated output voltage will typically agree with an HP3458A voltmeter to five digits. If a DAC will be sinking or sourcing a significant current, then the output voltage should be measured as close to the DAC as possible.

Most of the data sheet specifications use a 4.096V reference, so this is the preferred reference to use for these experiments. Using the 5V reference has the limitation that V_{CC} may be slightly lower than V_{REF}, which may affect the full-scale error. Selecting the 5V reference as the source for V_{CC} overcomes this, however the total current that the LTC2606 can source will be limited to approximately 5mA.

Using an external power supply is highly recommended for these experiments, especially those that draw significant current. Refer to the DC590 Quick Start guide for details.

Resolution

The onboard LTC2421 ADC has an input resolution of 6 μ V. This will easily resolve a 1 LSB (76 μ V for V_{REF} = 5V, 62.5 μ V for V_{REF} = 4.096V) change in the LTC2606 output. Set the DAC output to a voltage close to mid-scale. Select the FINE slider on the control panel with the mouse and use the right and left arrow keys to step the output by single LSBs. The change should be clearly visible in the output graph. Note: It may be necessary to wait for the graph to clear if a large step has just occurred.

EXPERIMENTS

Integral Nonlinearity

A rough measurement of INL can be taken using the onboard ADC. Measure the LTC2606 output at code 256 and 65,535 and calculate the slope and intercept using a spreadsheet. Next, take several readings at intermediate points. The readings should not deviate from the calculated line by more than 64 LSBs, and they will typically be within 12 LSBs.

Load Regulation/DC Output Impedance

Select “5V REG” for the V_{CC} source. Set one of the outputs to mid-scale (code 32768). Source or sink 15mA from one of the DAC outputs by pulling it to power ground or V_{CC} with an appropriate value resistor. The voltage change should be less than 2.25mV, corresponding to an output impedance of 0.15 Ω . Output impedance is typically less

than 0.030 Ω (measure DAC voltage at the output pin if using a voltmeter).

Zero-Scale Error

Set the DAC output to code 0. The measured output should be less than 9mV and will typically be less than 1mV.

Offset Error

Set the DAC output to code 256. The output voltage should be within 9mV of the correct value, or $V_{REF} \times 256/65535$.

Gain Error

Set the DAC output to code 65,535. The output voltage should be within 0.7% of V_{REF} , and will typically be within 0.2%.

PARTS LIST

ITEM	QTY	REFERENCE	PART DESCRIPTION	MANUFACTURER/PART NUMBER
Required Circuit Components				
1	1	U7	IC, 24LC025	MICROCHIP, 24LC025

DEMO MANUAL DC812A

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
