

Micropower, wide bandwidth (900 kHz), 16 V CMOS operational amplifiers

Datasheet - production data

- Easy interfacing with high impedance sensors

Related topics

- See TSX63x series for reduced power consumption (45 mA, 200 kHz)
- See TSX92x series for higher gain bandwidth products (10 MHz)

Applications

- Industrial and automotive signal conditioning
- Active filtering
- Medical instrumentation
- High impedance sensors

Description

The TSX56x, TSX56xA series of operational amplifiers benefit from STMicroelectronics® 16 V CMOS technology to offer state-of-the-art accuracy and performance in the smallest industrial packages. The TSX56x, TSX56xA have pinouts compatible with industrial standards and offer an outstanding speed/power consumption ratio, 900 kHz gain bandwidth product while consuming only 250 μ A at 16 V. Such features make the TSX56x, TSX56xA ideal for sensor interfaces and industrial signal conditioning. The wide temperature range and high ESD tolerance ease use in harsh automotive applications.

Table 1: Device summary

Version	Standard V_{IO}	Enhanced V_{IO}
Single	TSX561	TSX561A
Dual	TSX562	TSX562A
Quad	TSX564	TSX564A

Features

- Low power consumption: 235 μ A typ. at 5 V
- Supply voltage: 3 V to 16 V
- Gain bandwidth product: 900 kHz typ.
- Low offset voltage
 - “A” version: 600 μ V max.
 - Standard version: 1 mV max.
- Low input bias current: 1 pA typ.
- High tolerance to ESD: 4 kV
- Wide temperature range: -40 to 125 °C
- Automotive qualification
- Tiny packages available: SOT23-5, DFN8 2 mm x 2 mm, MiniSO8, QFN16 3 mm x 3 mm, and TSSOP14

Benefits

- Power savings in power-conscious applications

	MM: machine model for TSX562 and TSX564 ⁽⁸⁾	100		
	CDM: charged device model ⁽⁹⁾	1.5	kV	
	Latch-up immunity	200	mA	

Notes:

- ⁽¹⁾All voltage values, except the differential voltage are with respect to the network ground terminal.
- ⁽²⁾The differential voltage is the non-inverting input terminal with respect to the inverting input terminal.
- ⁽³⁾V_{CC} - V_{in} must not exceed 18 V, V_{in} must not exceed 18 V
- ⁽⁴⁾Input current must be limited by a resistor in series with the inputs.
- ⁽⁵⁾R_{th} are typical values.
- ⁽⁶⁾Short-circuits can cause excessive heating and destructive dissipation.
- ⁽⁷⁾Human body model: 100 pF discharged through a 1.5 kΩ resistor between two pins of the device, done for all couples of pin combinations with other pins floating.
- ⁽⁸⁾Machine model: a 200 pF cap is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω), done for all couples of pin combinations with other pins floating.
- ⁽⁹⁾Charged device model: all pins plus package are charged together to the specified voltage and then discharged directly to ground.

Table 3: Operating conditions

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	3 to 16	V
V_{icm}	Common-mode input voltage range	$(V_{CC-}) - 0.1$ to $(V_{CC+}) + 0.1$	
T_{oper}	Operating free-air temperature range	-40 to 125	°C

5 Application information

5.1 Operating voltages

The amplifiers of the TSX56x and TSX56xA series can operate from 3 V to 16 V. Their parameters are fully specified at 3.3 V, 5 V, and 16 V power supplies. However, the parameters are very stable in the full V_{CC} range. Additionally, the main specifications are guaranteed in extended temperature ranges from -40 to 125 °C.

5.2 Rail-to-rail input

The TSX56x and TSX56xA devices are built with two complementary PMOS and NMOS input differential pairs. The devices have a rail-to-rail input, and the input common mode range is extended from $(V_{CC-}) - 0.1$ V to $(V_{CC+}) + 0.1$ V.

However, the performance of these devices is clearly optimized for the PMOS differential pairs (which means from $(V_{CC-}) - 0.1$ V to $(V_{CC+}) - 1.5$ V).

Beyond $(V_{CC+}) - 1.5$ V, the operational amplifiers are still functional but with degraded performance, as can be observed in the electrical characteristics section of this datasheet (mainly V_{io} and GBP). These performances are suitable for a number of applications that need to be rail-to-rail.

The devices are designed to prevent phase reversal.

5.3 Input offset voltage drift over temperature

The maximum input voltage drift over the temperature variation is defined as the offset variation related to the offset value measured at 25 °C. The operational amplifier is one of the main circuits of the signal conditioning chain, and the amplifier input offset is a major contributor to the chain accuracy. The signal chain accuracy at 25 °C can be compensated during production at application level. The maximum input voltage drift over temperature enables the system designer to anticipate the effects of temperature variations.

The maximum input voltage drift over temperature is computed using [Equation 1](#).

Equation 1

$$\frac{\Delta V_{io}}{\Delta T} = \max \left| \frac{V_{io}(T) - V_{io}(25\text{ °C})}{T - 25\text{ °C}} \right|$$

Where T = -40 °C and 125 °C.

The datasheet maximum value is guaranteed by measurements on a representative sample size ensuring a C_{pk} (process capability index) greater than 2.

5.4 Long term input offset voltage drift

To evaluate product reliability, two types of stress acceleration are used:

- Voltage acceleration, by changing the applied voltage
- Temperature acceleration, by changing the die temperature (below the maximum junction temperature allowed by the technology) with the ambient temperature.

The voltage acceleration has been defined based on JEDEC results, and is defined using [Equation 2](#).

Equation 2

$$A_{FV} = e^{\beta \cdot (V_S - V_U)}$$

Where:

A_{FV} is the voltage acceleration factor

β is the voltage acceleration constant in $1/V$, constant technology parameter ($\beta = 1$)

V_S is the stress voltage used for the accelerated test

V_U is the voltage used for the application

The temperature acceleration is driven by the Arrhenius model, and is defined in [Equation 3](#).

Equation 3

$$A_{FT} = e^{\frac{E_a}{k} \cdot \left(\frac{1}{T_U} - \frac{1}{T_S} \right)}$$

Where:

A_{FT} is the temperature acceleration factor

E_a is the activation energy of the technology based on the failure rate

k is the Boltzmann constant ($8.6173 \times 10^{-5} \text{ eV} \cdot \text{K}^{-1}$)

T_U is the temperature of the die when V_U is used (K)

T_S is the temperature of the die under temperature stress (K)

The final acceleration factor, A_F , is the multiplication of the voltage acceleration factor and the temperature acceleration factor ([Equation 4](#)).

Equation 4

$$A_F = A_{FT} \times A_{FV}$$

A_F is calculated using the temperature and voltage defined in the mission profile of the product. The A_F value can then be used in [Equation 5](#) to calculate the number of months of use equivalent to 1000 hours of reliable stress duration.

Equation 5

$$\text{Months} = A_F \times 1000 \text{ h} \times 12 \text{ months} / (24 \text{ h} \times 365.25 \text{ days})$$

To evaluate the op amp reliability, a follower stress condition is used where V_{CC} is defined as a function of the maximum operating voltage and the absolute maximum rating (as recommended by JEDEC rules).

The V_{io} drift (in μV) of the product after 1000 h of stress is tracked with parameters at different measurement conditions (see [Equation 6](#)).

Equation 6

$$V_{CC} = \max V_{op} \text{ with } V_{icm} = V_{CC} / 2$$

The long term drift parameter (ΔV_{io}), estimating the reliability performance of the product, is obtained using the ratio of the V_{io} (input offset voltage value) drift over the square root of the calculated number of months ([Equation 7](#)).

Equation 7

$$\Delta V_{io} = \frac{V_{io} \text{ drift}}{\sqrt{(\text{months})}}$$

Where V_{io} drift is the measured drift value in the specified test conditions after 1000 h stress duration.

5.5 PCB layouts

For correct operation, it is advised to add 10 nF decoupling capacitors as close as possible to the power supply pins.

5.6 Macromodel

Accurate macromodels of the TSX56x, TSX56xA devices are available on the STMicroelectronics' website at: www.st.com. These models are a trade-off between accuracy and complexity (that is, time simulation) of the TSX56x and TSX56xA operational amplifiers. They emulate the nominal performance of a typical device within the specified operating conditions mentioned in the datasheet. They also help to validate a design approach and to select the right operational amplifier, *but they do not replace on-board measurements*.

6 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: www.st.com. ECOPACK® is an ST trademark.

8 Revision history

Table 13: Document revision history

Date	Revision	Changes
06-Aug-2012	1	Initial release.
18-Sep-2012	2	Added TSX562, TSX564, TSX562A, and TSX564A devices. Updated Features, Description, Figure 1, Table 1 (added DFN8, MiniSO8, QFN16, and TSSOP14 package). Updated Table 1 (updated ESD MM values). Updated Table 4 and Table 5 (added footnotes), Section 5 (added Figure 24 to Figure 28 and Table 8 to Table 12), Table 13 (added dual and quad devices). Minor corrections throughout document.
23-May-2013	3	Replaced the silhouette, pinout, package diagram, and mechanical data of the DFN8 2x2 and QFN16 3x3 packages. Added Benefits and Related products. Table 1: updated R_{thja} values and added R_{thjc} values for DFN8 2x2 and QFN16 3x3. Updated Section 4.3, Section 4.4, and Section 4.6 Replaced Figure 23: SOT23-5 package mechanical drawing and Table 7: SOT23-5 package mechanical data.
09-Aug-2013	4	Added SO8 package for dual version TSX562 and TSX562A. Table 2: updated for SO8 package Table 13: added order codes TSX562IDT, TSX562IYDT, TSX562AIDT, TSX562AIYDT; updated automotive grade status.
07-Feb-2017	5	Removed SO8 package Table 8: "DFN8 2x2 mechanical data" : removed "N" Table 11: "TSSOP14 mechanical data" : added "L" and "L1" in inches; updated "aaa" in inches. Table 12: "Order codes" : removed TSX562IDT, TSX562IYDT, TSX562AIDT, TSX562AIYDT. Updated terminology

IMPORTANT NOTICE – PLEASE READ CAREFULLY

STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice. Purchasers should obtain the latest relevant information on ST products before placing orders. ST products are sold pursuant to ST's terms and conditions of sale in place at the time of order acknowledgement.

Purchasers are solely responsible for the choice, selection, and use of ST products and ST assumes no liability for application assistance or the design of Purchasers' products.

No license, express or implied, to any intellectual property right is granted by ST herein.

Resale of ST products with provisions different from the information set forth herein shall void any warranty granted by ST for such product.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
