

Dual 256-Tap, Volatile, Low-Voltage Linear Taper Digital Potentiometers

General Description

The MAX5391/MAX5393 dual 256-tap, volatile, low-voltage linear taper digital potentiometers offer three end-to-end resistance values of 10k Ω , 50k Ω , and 100k Ω . Operating from a single +1.7V to +5.5V power supply, these devices provide a low 35ppm/ $^{\circ}$ C end-to-end temperature coefficient. The devices feature an SPI™ interface.

The small package size, low supply voltage, low supply current, and automotive temperature range of the MAX5391/MAX5393 make the devices uniquely suitable for the portable consumer market, battery backup industrial applications, and the automotive market.

The MAX5391/MAX5393 include two digital potentiometers in a voltage-divider configuration. The MAX5391/MAX5393 are specified over the -40 $^{\circ}$ C to +125 $^{\circ}$ C automotive temperature range and are available in a 16-pin, 3mm x 3mm TQFN and a 14-pin TSSOP package, respectively.

Applications

Low-Voltage Battery Applications
 Portable Electronics
 Mechanical Potentiometer Replacement
 Offset and Gain Control
 Adjustable Voltage References/Linear Regulators
 Automotive Electronics

Features

- ◆ Dual 256-Tap Linear Taper Positions
- ◆ Single +1.7V to +5.5V Supply Operation
- ◆ Low 12 μ A Quiescent Supply Current
- ◆ 10k Ω , 50k Ω , and 100k Ω End-to-End Resistance Values
- ◆ SPI-Compatible Interface
- ◆ Wiper Set to Midscale on Power-Up
- ◆ -40 $^{\circ}$ C to +125 $^{\circ}$ C Operating Temperature Range

Ordering Information

PART	PIN-PACKAGE	END-TO-END RESISTANCE (k Ω)
MAX5391LATE+	16 TQFN-EP*	10
MAX5391MATE+	16 TQFN-EP*	50
MAX5391NATE+	16 TQFN-EP*	100
MAX5393LAUD+	14 TSSOP	10
MAX5393MAUD+	14 TSSOP	50
MAX5393NAUD+	14 TSSOP	100

Note: All devices are specified in the -40 $^{\circ}$ C to +125 $^{\circ}$ C temperature range.

+Denotes a lead(Pb)-free/RoHS-compliant package.

*EP = Exposed pad.

ABSOLUTE MAXIMUM RATINGS

V _{DD} to GND	-0.3V to +6V	Continuous Power Dissipation (T _A = +70°C)
H ₋ , W ₋ , L ₋ to GND	-0.3V to the lower of (V _{DD} + 0.3V) or +6V	14-Pin TSSOP (derate 10mW/°C above +70°C) 796.8mW
All Other Pins to GND	-0.3V to +6V	16-Pin TQFN (derate 14.7mW/°C above +70°C) ... 1176.5mW
Continuous Current into H ₋ , W ₋ , and L ₋		Operating Temperature Range
MAX5391L/MAX5393L	±5mA	-40°C to +125°C
MAX5391M/MAX5393M	±2mA	Junction Temperature
MAX5391N/MAX5393N	±1mA	+150°C
		Storage Temperature Range.....
		-65°C to +150°C
		Lead Temperature (soldering, 10s)
		+300°C
		Soldering Temperature (reflow)
		+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V_{DD} = +1.7V to +5.5V, V_{H-} = V_{DD}, V_{L-} = 0, T_A = T_{MIN} to T_{MAX}, unless otherwise noted. Typical values are at V_{DD} = +1.8V, T_A = +25°C.) (Note 1)

DIN Setup Time	t _{DS}		40			ns
DIN Hold Time	t _{DH}		0			ns
SCLK Rise to $\overline{\text{CS}}$ Fall Delay	t _{CS0}		10			ns
SCLK Rise to SCLK Rise Hold Time	t _{CS1}		40			ns
$\overline{\text{CS}}$ Pulse-Width High	t _{CSW}		100			ns

Note 1: All devices are 100% production tested at T_A = +25°C. Specifications over temperature limits are guaranteed by design and characterization.

Note 2: DNL and INL are measured with the potentiometer configured as a voltage-divider (Figure 1) with H₋ = V_{DD} and L₋ = GND. The wiper terminal is unloaded and measured with a high-input-impedance voltmeter.

Note 3: R-DNL and R-INL are measured with the potentiometer configured as a variable resistor (Figure 1). DNL and INL are measured with the potentiometer configured as a variable resistor. H₋ is unconnected and L₋ = GND. For V_{DD} = +5V, the wiper terminal is driven with a source current of 400μA for the 10kΩ configuration, 80μA for the 50kΩ configuration, and 40μA for the 100kΩ configuration. For V_{DD} = +1.7V, the wiper terminal is driven with a source current of 150μA for the 10kΩ configuration, 30μA for the 50kΩ configuration, and 15μA for the 100kΩ configuration.

Note 4: The wiper resistance is the value measured by injecting the currents given in Note 3 into W₋ with L₋ = GND.
 $R_{W-} = (V_{W-} - V_{H-})/I_{W-}$

Note 5: Drive HA with a 1kHz GND to V_{DD} amplitude tone. LA = LB = GND. No load. WB is at midscale with a 10pF load. Measure WB.

Note 6: The wiper-settling time is the worst-case 0 to 50% rise time, measured between tap 0 and tap 127. H₋ = V_{DD}, L₋ = GND, and the wiper terminal is loaded with 10pF capacitance to ground.

Note 7: Digital timing is guaranteed by design and characterization, not production tested.

Pin Configurations

Pin Description

PIN		NAME	FUNCTION
MAX5391 (TQFN-EP)	MAX5393 (TSSOP)		
1	3	HB	Resistor B High Terminal. The voltage at HB can be higher or lower than the voltage at LB. Current can flow into or out of HB.
2	4	WB	Resistor B Wiper Terminal
3	2	LB	Resistor B Low Terminal. The voltage at LB can be higher or lower than the voltage at HB. Current can flow into or out of LB.
4	5	I.C.	Internally Connected. Connect to GND.
5	1	GND	Ground
6, 11, 13	10	N.C.	No Connection. Not internally connected.
7	6	BYP	Internal Power-Supply Bypass. For additional charge-pump filtering, bypass to GND with a capacitor close to the device.
8	7	\overline{CS}	Active-Low Chip-Select Input
9	8	DIN	Serial-Interface Data Input
10	9	SCLK	Serial-Interface Clock Input
12	11	VDD	Power-Supply Input. Bypass VDD to GND with a 0.1µF capacitor close to the device.
14	13	HA	Resistor A High Terminal. The voltage at HA can be higher or lower than the voltage at LA. Current can flow into or out of HA.
15	12	WA	Resistor A Wiper Terminal
16	14	LA	Resistor A Low Terminal. The voltage at LA can be higher or lower than the voltage at HA. Current can flow into or out of LA.
—	—	EP	Exposed Pad (MAX5391 Only). Connect to GND.

Dual 256-Tap, Volatile, Low-Voltage Linear Taper Digital Potentiometers

Detailed Description

The MAX5391/MAX5393 dual 256-tap, volatile, low-voltage linear taper digital potentiometers offer three end-to-end resistance values of 10kΩ, 50kΩ, and 100kΩ. Each potentiometer consists of 255 fixed resistors in series between terminals H₋ and L₋. The potentiometer wiper, W₋, is programmable to access any one of the 256 tap points on the resistor string.

The potentiometers in each device are programmable independently of each other. The MAX5391/MAX5393 feature an SPI interface.

Charge Pump

The MAX5391/MAX5393 contain an internal charge pump that guarantees the maximum wiper resistance, R_{WL}, to be less than 200Ω for supply voltages down to 1.7V. Pins H₋, W₋, and L₋ are still required to be less than V_{DD} + 0.3V. A bypass input, BYP, is provided to allow additional filtering of the charge-pump output, further reducing clock feed through that may occur on H₋, W₋, or L₋. The nominal clock rate of the charge pump is 600kHz. BYP should remain resistively unloaded as any additional load would produce a ripple of approximately I_{BYP}/(600kHz x C_{BYP}) volts. See the Charge-Pump Feedthrough at W₋ vs. C_{BYP} graph in the *Typical Operating Characteristics* for C_{BYP} sizing guidelines with respect to clock feedthrough to the wiper. The value of

C_{BYP} does affect the startup time of the charge pump; however, C_{BYP} does not impact the ability to communicate with the device, nor is there a minimum C_{BYP} requirement. The maximum wiper impedance specification is not guaranteed until the charge pump is fully settled. See the BYP Ramp vs. C_{BYP} graph in the *Typical Operating Characteristics* for C_{BYP} impact on charge-pump settling time.

SPI Digital Interface

The MAX5391/MAX5393 include a SPI interface that provides a 3-wire write-only serial-data interface to control the wiper tap position through inputs chip select (\overline{CS}), data in (DIN), and data clock (SCLK). Drive \overline{CS} low to load data from DIN synchronously into the serial shift register on the rising edge of each SCLK pulse. The MAX5391/MAX5393 load the last 10 bits of clocked data into the appropriate potentiometer control register once \overline{CS} transitions high. See Figures 2 and 3. Data written to a memory register immediately updates the wiper position. Keep \overline{CS} low during the entire data stream to prevent the data from being terminated.

The first two bits A1:A0 (address bits) address one of the two potentiometers. See Table 1. The power-on reset (POR) circuitry sets the wiper to midscale.

Table 1. SPI Register Map

Bit Number	1	2	3	4	5	6	7	8	9	10
Bit Name	A1	A0	D7	D6	D5	D4	D3	D2	D1	D0
Write Wiper Register A	0	0	D7	D6	D5	D4	D3	D2	D1	D0
Write Wiper Register B	0	1	D7	D6	D5	D4	D3	D2	D1	D0
Write to Both A and B	1	1	D7	D6	D5	D4	D3	D2	D1	D0

Figure 2. SPI Digital Interface Format

Dual 256-Tap, Volatile, Low-Voltage Linear Taper Digital Potentiometers

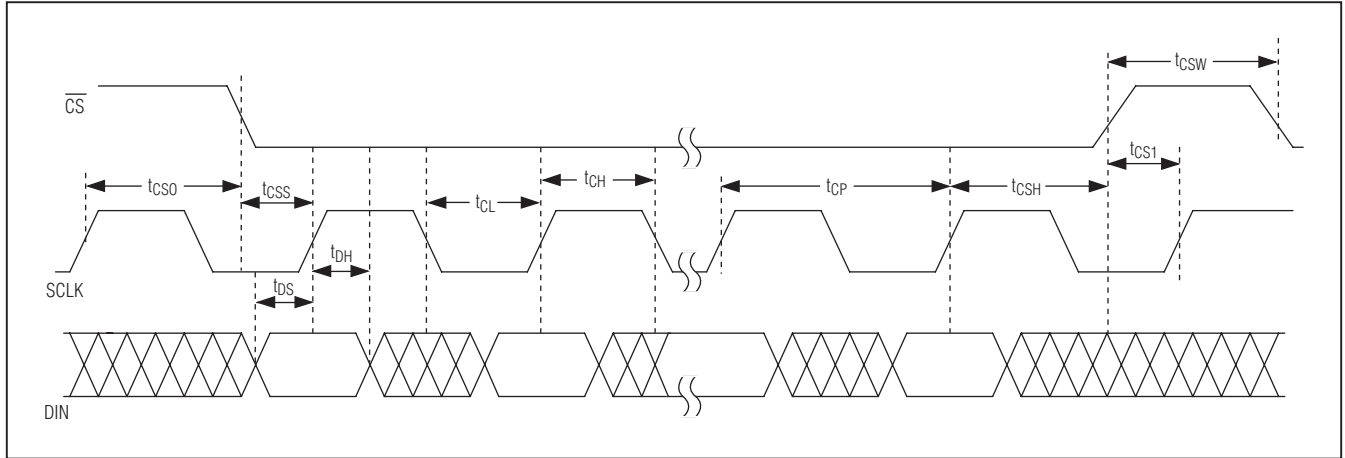

Figure 3. SPI Timing Diagram

REG A: The data byte writes to register A, and the wiper of potentiometer A moves to the appropriate position at the rising edge of \overline{CS} . D[7:0] indicates the position of the wiper. D[7:0] = 00h moves the wiper to the position closest to LA. D[7:0] = FFh moves the wiper closest to HA. D[7:0] is 80h following power-on.

REG B: The data byte writes to register B, and the wiper of potentiometer B moves to the appropriate position at the rising edge of \overline{CS} . D[7:0] indicates the position of the wiper. D[7:0] = 00h moves the wiper to the position closest to LB. D[7:0] = FFh moves the wiper to the position closest to HB. D[7:0] is 80h following power-on.

REG A and B: The data byte writes to registers A and B, and the wipers of potentiometers A and B move to the appropriate position. D[7:0] indicates the position of the wiper. D[7:0] = 00h moves the wiper to the position closest to L_. D[7:0] = FFh moves the wiper to the position closest to H_. D[7:0] is 80h following power-on.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
