

### Features

- Surface Mount Device
- No Wire Bonding Required
- Rugged Silicon-Glass Construction
- Silicon Nitride Passivation
- Polymer Scratch Protection
- Low Parasitic Capacitance and Inductance
- Higher Average and Peak Power Handling
- RoHS\* Compliant and 260°C Reflow Compatible

### Description and Applications

This device is a silicon-glass PIN diode chip fabricated with M/A-COM Technology Solutions patented HMIC™ process. This device features two silicon pedestals embedded in a low loss glass. The diode is formed on the top of one pedestal and connections to the backside of the device are facilitated by making the pedestal sidewalls conductive. Selective backside metalization is applied producing a surface mount device. The topside is fully encapsulated with silicon nitride and has an additional polymer layer for scratch protection. These protective coatings prevent damage to the junction and the anode air-bridge during handling and assembly.

These packageless devices are suitable for usage in moderate incident power (10 W C.W.) or higher incident peak power (500 W) series, shunt, or series-shunt switches. Small parasitic inductance, 0.35 nH, and an excellent RC time constant, 0.22 pS, make these devices ideal for switch applications where higher  $P_{1dB}$  and IP3 values are required. These diodes can also be used in p, T, tapered resistance, and switched-pad attenuator control circuits for 50W or 75W systems.

## Electrical Specifications @ T<sub>AMB</sub> = +25°C

Symbol	Conditions	Units	Min.	Typical	Max.
C <sub>T</sub>	-40V, 1MHz	pF		0.140	0.200
	-40V, 1GHz	pF		0.090	
R <sub>S</sub>	100mA, 100MHz	Ω		1.4	2.2
	20mA, 100MHz	Ω		2.4	3.2
V <sub>F</sub>	10mA	V		0.87	1.00
V <sub>R</sub>	10μA	V	-200	-275	
I <sub>R</sub>	-200V	μA			-10
	-40V	nA		8	
θ <sub>JL</sub>	Steady State	°C/W		50	
T <sub>L</sub>	+10mA / -6mA ( 50% - 90% V )	μS		2.8	

### Handling

All semiconductor chips should be handled with care to avoid damage or contamination from perspiration and skin oils. The use of plastic tipped tweezers or vacuum pickups is strongly recommended for individual components. Bulk handling should ensure that abrasion and mechanical shock are minimized.

### Die Attach

Attachment to a circuit board is made simple through the use of surface mount technology. Mounting pads are conveniently located on the bottom surface of these devices and are removed from the active junction locations. These devices are well suited for solder attachment onto hard and soft substrates. The use of 80/20, Au/Sn or RoHS compliant solders is recommended. A conductive silver epoxy may also be used.

When soldering these devices to a hard substrate, hot gas die bonding is preferred. We recommend utilizing a vacuum tip and force of 60 to 100 grams applied to the top surface of the device. When soldering to soft substrates, it is recommended to use a Gold-Tin interface at the circuit board mounting pads. Position the device so that its mounting pads are force aligned with the circuit board mounting pads and reflow the solder by heating the circuit trace near the mounting pads while applying 60 to 100 grams of perpendicular to the top surface of the die.

The solder joint must **not** be made one pad at a time. Doing so could create unequal heat flow and produce thermal and/or mechanical stresses. It is also **not** recommended to reflow solder by causing heat to flow through the top surface of the die. Since the HMIC glass is transparent, the edges of the mounting pads can be visually inspected through the die after attach is completed.

**Typical Total Resistance ( $R_s$ ) vs. Forward Current ( $I_f$ ) and Frequency**

**Typical Total Capacitance ( $C_T$ ) vs. Reverse ( $V_r$ ) Voltage and Frequency**

**$C_T$  vs.  $V_r$  @ 100MHz and 1GHz**

**Parallel Resistance ( $R_p$ ) vs.  $V_r$  @ 100MHz**

**$R_s$  vs.  $I_f$  @ 100MHz and 1GHz**

**Series Inductance ( $L_s$ ) vs. Frequency @ 10mA**

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
