DATA SHEET

SKY16602-632LF: Low-Threshold PIN Diode Limiter 0.2 to 4.0 GHz

Applications

- Cellular infrastructure
- WLAN, WiMAX
- Receiver LNA protection
- Test instruments

Features

- Optimized for 0.2 to 4.0 GHz operation
- Low limiting threshold (+5 dBm typical)
- Low insertion loss
- Low distortion
- Integrated PIN limiter and Schottky diodes, and DC blocks
- MLP (2-pin, 2.3 x 2.3 mm) Pb-free package, (MSL1, 260°C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04–0074.

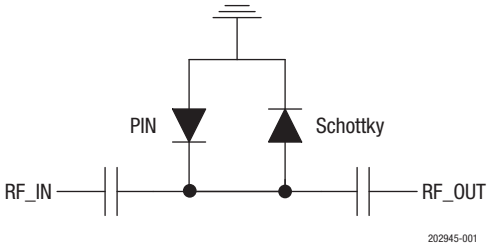

Figure 1. SKY16602-632LF Block Diagram

Description

The SKY16602-632LF is a fully integrated PIN diode low-threshold limiter module in a surface-mount package. It is designed for use as a passive receiver protector in wireless or other RF systems for frequencies up to 4 GHz. It features a low limiting threshold, low-insertion loss, and low distortion in a single Micro Lead-frame Package (MLP).

The SKY16602-632LF module is comprised of a PIN limiter diode, a Schottky diode, and 2 DC blocking caps at the RF ports in a 2-lead MLP. The small package design reduces printed circuit board area. The module can be tuned using external surface mount technology (SMT) components for optimal narrow band performance over the 0.2 to 4.0 GHz operating range.

The module can operate over the temperature range of –40°C to +85°C.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

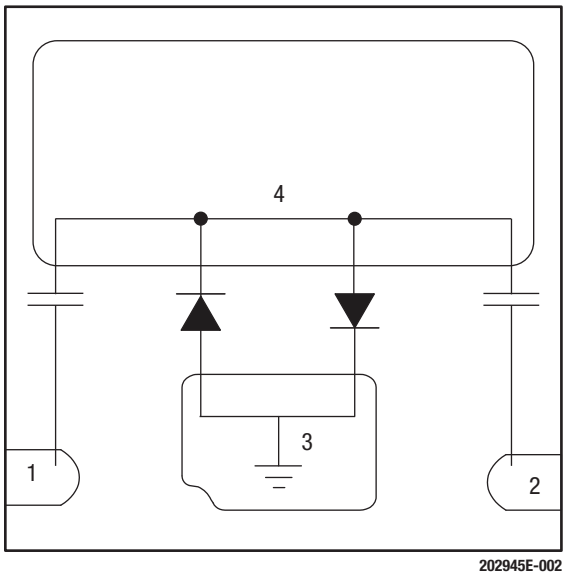

Figure 2. SKY16602-632LF Pinout
(Top View)

Table 1. SKY16602-632LF Signal Descriptions

Pin	Name	Description
1	RF_IN	RF input, AC coupled.
2	RF_OUT	RF output, AC coupled.
3	GND	Must be connected to chassis ground
4	PAD	Exposed pad **(must be isolated from ground)**

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY16602-632LF are provided in Table 2. Electrical specifications for the un-tuned limiter module are provided in Table 3, and typical performance characteristics are illustrated in Figures 4 and 5. Electrical specifications for the 2.45 GHz tuned limiter module are provided in Table 4, and typical performance characteristics are illustrated in Figures 6 and 7.

Figures 8 and 9 show the power derating curves for the limiter. In Figure 8, the temperature is referenced to the bottom of the QFN package. The power derating curve with the temperature referenced to the bottom of the printed circuit board is shown in Figure 9.

Table 2. SKY16602-632LF Absolute Maximum Ratings[1]

Parameter	Symbol	Minimum	Maximum	Unit
RF input power (CW) at T_{CASE} = 85°C	P_{IN}		12	W
RF input power (1 µs pulse, 10% duty cycle) at T_{CASE} = 85°C	P_{IN}		120	W
CW power dissipation at T_{CASE} = 85°C	P_{DIS}		0.4	W
Storage temperature	T_{STG}	–65	150	°C
Operating temperature	T_{OP}	–40	85	°C
Electrostatic discharge:	ESD			
Charged-Device Model (CDM), Class 4			1000	V
Human Body Model (HBM), Class 1B			250	V
Machine Model (MM), Class A			150	V

[1] Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: *Although these devices are designed to be as robust as possible, electrostatic discharge (ESD) can damage them. These devices must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be employed at all times.*

Table 3. SKY16602-632LF Electrical Specifications (Untuned Circuit, Reference Figure 1)
(T_{OP} = 25°C, Z_O = 50 Ω, as Measured in Skyworks Evaluation Board Optimized for Operation at 0.2 to 4.0 GHz, Unless Otherwise Noted)

Parameter	Symbol	Condition	Frequency	Min.	Typ.	Max.	Units
Reverse voltage	V_R					20	V
Forward current	I_F					50	mA
Insertion loss	I_L	P_{IN} = 0 dBm	0.90 GHz		0.3	0.5	dB
Return loss	R_L	P_{IN} = 0 dBm	0.90 GHz		14		dB
Threshold level	T_L	P1dB	0.90 GHz	5.3	6.0	6.7	dBm
Saturated CW input power[1]	P_{IN_CW}		0.90 GHz		30		dBm
Flat leakage power[2]	F_L	P_{IN} = +10 dBm	0.90 GHz		6		dBm
Recovery time[3]	t_R		0.90 GHz		5		ns
Thermal resistance	θ_{JC}	Junction-to-case			114		°C/W

[1] Saturated CW input power is defined as the point where the diode series resistance does not change with the rectified current. As the input power increases past this point, output power will increase until the diode reaches its max power limit.

[2] Flat leakage power is defined as the power level after the limiter has fully turned on and the output pulse reaches a constant level.

[3] Recovery time represents the transition time from the high-loss to low-loss state following the removal of high-power input. RF pulse modulation: 1 µs pulse width and 0.1% duty factor.

Theory of Operation

A limiter prevents overload by allowing RF signals that are below a certain threshold to pass through, but larger signals exceeding the threshold are increasingly attenuated. The SKY16602-632LF has a lower threshold level over a traditional self-bias limiter circuit with an inductor for a ground return. It accomplishes this by adding a basic PIN limiter diode (Pin 1) in parallel to a Schottky diode (Pin 2). The low turn on voltage of the Schottky diode reduces the threshold level while the PIN limiter diode protects the Schottky diode at higher power levels. Therefore, for maximum RF power handling, the RF input signal is required to be connected to Pin 1. The two internal DC input/output capacitors provide DC blocking needed for most applications.

Tuned Circuit

The module may be RF tuned for optional RF match and insertion loss centered at a target frequency within its normal band of operation. This is done with the use of external surface mount components. The schematic diagram in Figure 3 shows the SKY16602-632LF limiter with a shunt connected capacitor and inductor tuned for 2.45 GHz. The bill of materials for the 2.45 GHz tuned circuit is shown in Table 4. Electrical specifications for the 2.45 GHz tuned limiter module are provided in Table 5.

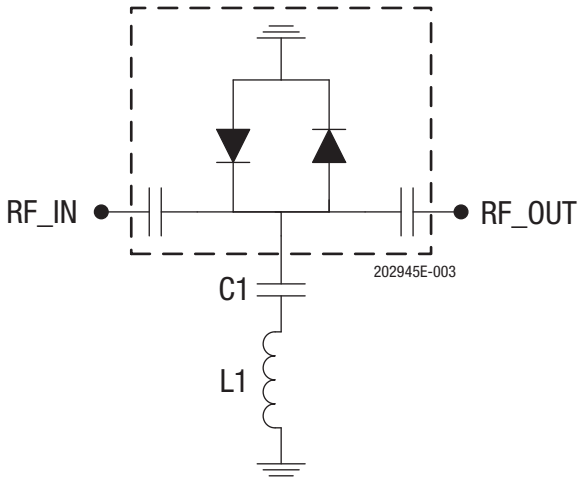

Figure 3. SKY16602-632LF Schematic with External Tuning Networks Optimized for 2.45 GHz

Table 4. Evaluation Board Bill of Materials for EN33-D946-001 (2.45 GHz Tuned Circuit)

Component	Value	Size	Manufacturer	Mfg. Part Number	Characteristics
C1	15 pF	0402	Murata	GRM1555C1H150J	C0G, 50 V
L1	2.2 nH	0402	Taiyo Uden	HK10052N2S	300 mA, R = 0.13 Ω

Table 5. SKY16602-632LF Electrical Specifications (Tuned to 2.45 GHz Operation, Reference Figure 3)
(T_{OP} = 25°C, Z_O = 50 Ω, as Measured in Skyworks Evaluation Board Optimized for Operation at 2.45 GHz, Unless Otherwise Noted)

Parameter	Symbol	Condition	Frequency	Min.	Typ.	Max.	Units
Insertion loss	I_L	P_{IN}= 0 dBm	2.45 GHz		0.5		dB
Return loss	R_L	P_{IN}= 0 dBm	2.45 GHz		25		dB
Threshold level	T_L	P1dB	2.45 GHz		5		dBm
Saturated CW input power[1]	P_{IN_CW}		2.45 GHz		23		dBm
Flat leakage power[2]	F_L	P_{IN} = +10 dBm	2.45 GHz		4		dBm
Input third order intercept	IIP3	P_{IN} = –10 dBm/tone, spacing = 10 MHz	2.45 GHz		21		dBm
Recovery time[3]	t_R		2.45 GHz		5		ns
Thermal resistance	θ_{JC}	Junction to case			114		°C/W

1 Saturated CW input power is defined as the point where the diode series resistance does not change with the rectified current. As the input power increases past this point, output power will increase until the diode reaches its max power limit.

2 Flat leakage power is defined as the power level after the limiter has fully turned on and the output pulse reaches a constant level.

3 Recovery time represents the transition time from the high-loss to low-loss state following the removal of high-power input. RF pulse modulation: 1 μs pulse width and 0.1% duty factor.

Evaluation Board Description

The SKY16602-632LF evaluation boards are used to test the performance of the limiter. Assembly drawings for the evaluation boards are shown in Figures 10 and 11. The evaluation board layer detail is provided in Figure 12.

Package Dimensions

The PCB layout footprint for the SKY16602-632LF is shown in Figure 13. Typical part markings are noted in Figure 14. Package dimensions are shown in Figure 15, and tape and reel dimensions are provided in Figure 16.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY16602-632LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, Solder Reflow Information, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
