

General Description

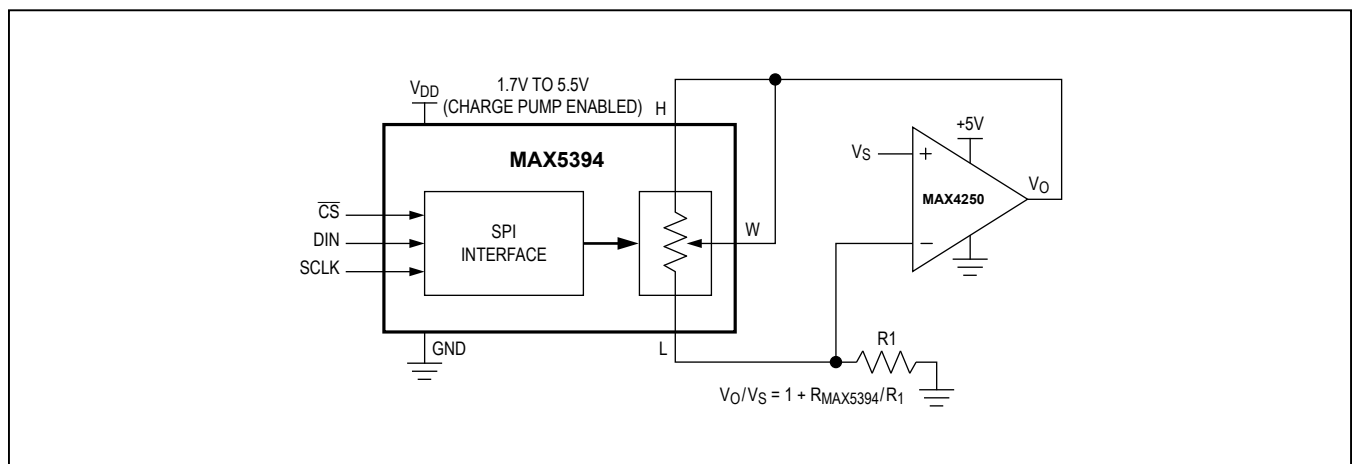

The MAX5394 single, 256-tap volatile, low-voltage linear taper digital potentiometer offers three end-to-end resistance values of 10k Ω , 50k Ω , and 100k Ω . Potentiometer terminals are independent of supply for voltages up to 5.25V with single-supply operation from 1.7V to 5.5V (charge pump enabled). User-controlled shutdown modes allow the H, W, or L terminal to be opened with the wiper position set to zero-code, midcode, full-code, or the value contained in the wiper register. Ultra-low-quiescent supply current (< 1 μ A) can be achieved for supply voltages between 2.6V and 5.5V by disabling the internal charge pump and not allowing potentiometer terminals to exceed the supply voltage by more than 0.3V. The MAX5394 provides a low 50ppm/ $^{\circ}$ C end-to-end temperature coefficient and features a SPI serial interface.

The small package size, low operating supply voltage, low supply current, and automotive temperature range of the MAX5394 make the device uniquely suited for the portable consumer market and battery-backup industrial applications.

The MAX5394 is available in a lead-free, 8-pin TDFN (2mm x 2mm) package. The device operates over the -40 $^{\circ}$ C to +125 $^{\circ}$ C automotive temperature range.

Ordering Information appears at end of data sheet.

Typical Operating Circuit

Benefits and Features

- Single Linear Taper 256-Tap Positions
- 10k Ω , 50k Ω , and 100k Ω End-to-End Resistance
- 1.7V to 5.5V Extended Single Supply
- 0 to 5.25V H, W, L Operating Voltage Independent of V_{DD}
- 1 μ A (typ) Supply Current in Low-Power Mode
- ± 1.0 LSB INL, ± 0.5 LSB DNL (max) Wiper Accuracy
- Power-On Sets Wiper to Midscale
- 50ppm/ $^{\circ}$ C End-to-End Temperature Coefficient
- 5ppm/ $^{\circ}$ C Ratiometric Temperature Coefficient
- -40 $^{\circ}$ C to +125 $^{\circ}$ C Operating Temperature Range
- 2mm x 2mm, 8-Pin TDFN Package
- SPI-Compatible Serial Interface

Applications

- Portable Electronics
- System Calibration
- Battery-Powered Systems
- Mechanical Potentiometer Replacement

Absolute Maximum Ratings

(All voltages referenced to GND.)

V _{DD}	-0.3V to +6V
H, W, L (charge pump enabled).....	-0.3V to +5.5V
H, W, L (charge pump disabled).....	-0.3V to the lower of (V _{DD} + 0.3V) or +6V
All Other Pins	-0.3V to +6V
Continuous Current into H, W, and L	
MAX5394L	5mA
MAX5394M	2mA
MAX5394N	1mA

Maximum Current into Any Input.....	50mA
Continuous Power Dissipation (T _A = +70°C)	
TDFN (derate 11.9mW/°C above +70°C).....	953.5mW
Operating Temperature Range.....	-40°C to +125°C
Storage Temperature Range.....	-65°C to +150°C
Junction Temperature.....	+150°C
Lead Temperature (soldering, 10s).....	+300°C
Soldering Temperature (reflow).....	+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Thermal Characteristics (Note 1)

TDFN

Junction-to-Ambient Thermal Resistance (θ _{JA})	83.9°C/W
Junction-to-Case Thermal Resistance (θ _{JC}).....	37.0°C/W

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

Electrical Characteristics

(V_{DD} = 1.7V to 5.5V, V_H = V_{DD}, V_L = GND, T_A = -40°C to +125°C, unless otherwise noted. Typical values are at V_{DD} = 1.8V, T_A = +25°C.) (Note 2)

Note 2: All devices are production tested at $T_A = +25^{\circ}C$ and are guaranteed by design and characterization for $T_A = -40^{\circ}C$ to $+125^{\circ}C$.

Note 3: DNL and INL are measured with the potentiometer configured as a voltage-divider with $V_H = 5.25$ (QP enabled) or V_{DD} (QP disabled) and $V_L = GND$. The wiper terminal is unloaded and measured with an ideal voltmeter.

Note 4: R-DNL and R-INL are measured with the potentiometer configured as a variable resistor (Figure 1). H is unconnected and $L = GND$.

For charge pump enabled, $V_{DD} = 1.7V$ to $5.5V$, the wiper terminal is driven with a source current of $400\mu A$ for the $10k\Omega$ configuration, $80\mu A$ for the $50k\Omega$ configuration, and $40\mu A$ for the $100k\Omega$ configuration.

For charge pump disabled and $V_{DD} = 5.5V$, the wiper terminal is driven with a source current of $400\mu A$ for the $10k\Omega$ configuration, $80\mu A$ for the $50k\Omega$ configuration, and $40\mu A$ for the $100k\Omega$ configuration.

For charge pump disabled and $V_{DD} = +2.6V$, the wiper terminal is driven with a source current of $200\mu A$ for the $10k\Omega$ configuration, $40\mu A$ for the $50k\Omega$ configuration, and $20\mu A$ for the $100k\Omega$ configuration.

Note 5: The wiper resistance is the maximum value measured by injecting the currents given in Note 4 into W with $L = GND$.
 $R_W = (V_W - V_H)/I_W$.

Note 6: Measured at W with H driven with a $1kHz$, $0V$ to V_{DD} amplitude tone and $V_L = GND$. Wiper at midscale with a $10pF$ load.
Note 7: Wiper-settling time is the worst-case 0-to-50% rise time, measured between tap 0 and tap 127. $H = V_{DD}$, $L = GND$, and the wiper terminal is loaded with $10pF$ capacitance to ground.

Note 8: Digital inputs at V_{DD} or GND .

Note 9: Digital timing is guaranteed by design and characterization, and is not production tested.

Pin Configuration

Pin Description

PIN	NAME	FUNCTION
1	L	Low Terminal. The voltage at L can be greater than or less than the voltage at H. Current can flow into or out of L.
2	GND	Ground
3	CS	Active-Low Chip-Select Digital Input
4	DIN	Serial-Interface Data Input
5	SCLK	Serial-Interface Clock Input
6	VDD	Power Supply
7	W	Wiper Terminal
8	H	High Terminal. The voltage at H can be greater than or less than the voltage at L. Current can flow into or out of H.
—	EP	Exposed Pad. Internally connected to GND. Connected to ground.

Functional Diagram

Detailed Description

The MAX5394 single, 256-tap volatile, low-voltage linear taper digital potentiometer offers three end-to-end resistance values of 10kΩ, 50kΩ, and 100kΩ. Potentiometer terminals are independent of supply for voltages up to +5.25V with single-supply operation from 1.7V to 5.5V (charge pump enabled). User-controlled shutdown modes allow the H, W, or L terminals to be opened with the wiper position set to zero-code, midcode, full-code, or the value contained in the wiper register. Ultra-low-quiescent supply current (< 1μA) can be achieved for supply voltages between 2.6V and 5.5V by disabling the internal charge pump and not allowing potentiometer terminals to exceed the supply voltage by more than 0.3V. The MAX5394 provides a low 50ppm/°C end-to-end temperature coefficient and features a SPI serial interface.

The small package size, low supply operating voltage, low supply current, and automotive temperature range of the MAX5394 make the device uniquely suited for the portable consumer market and battery-backup industrial applications.

Charge Pump

The MAX5394 contains an internal charge pump that guarantees the maximum wiper resistance, R_{WL} , to be less than 50Ω (25Ω typ) for supply voltages down to 1.7V and allows pins H, W, and L to be driven between GND and 5.25V independent of V_{DD} . Minimal charge-pump feedthrough is present at the terminal outputs and is illustrated by the Charge-Pump Feedthrough at W vs. Frequency graph in the *Typical Operating Characteristics*. The charge pump is on by default but can be disabled with QP_OFF and enabled with the QP_ON commands (Table 1). The MAX5394 minimum supply voltage with charge pump disabled is limited to 2.6V and terminal voltage cannot exceed -0.3V to ($V_{DD} + 0.3V$).

SPI Interface

The digital interface is powered from V_{DD} , not the internal charge-pump voltage. Therefore the V_{IH} and V_{IL} logic thresholds will follow V_{DD} as specified in the *Electrical Characteristics* table.

The SPI digital interface uses a 3-wire serial data interface to control the wiper tap position. This write-only interface contains three inputs: Chip Select (\overline{CS}), Data In (DIN), and Data Clock (SCLK). When \overline{CS} is taken low, data from the DIN pin is synchronously loaded into the serial shift register on each falling edge of each SCLK pulse (Figure 3). After all the data bits have been shifted in, they are latched into the potentiometer control register. Data written to a memory register immediately updates the wiper position.

Keep \overline{CS} low during the entire data stream to prevent the data from being terminated. The power-on default position of the wiper is midscale ($D[7:0] = 80H$).

Figure 3. SPI Digital Interface Format

QP_ON	1	0	1	0	0	0	0	1	X	X	X	X	X	X	X	X
RST	1	1	0	0	0	0	0	0	X	X	X	X	X	X	X	X

WIPER Command

The data byte writes to the wiper register and the potentiometer moves to the appropriate position. D[7:0] indicates the position of the wiper. D[7:0] = 0x00 moves the wiper to the position closest to L. D[7:0] = 0xFF moves the wiper closest to H. D[7:0] = 0x80 following power-on.

SD_CLR Command

Removes any existing shutdown condition. Connects all potentiometer terminals and returns the wiper to the value stored in the wiper register. The command does not affect the current status of the charge pump.

SD_H_WREG Command

Opens the H terminal and maintains the wiper at the wiper register location. Writes cannot be made to the wiper register while shutdown mode is engaged. Clearing shutdown mode will close the H terminal and allow the wiper register to be written. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

SD_H_ZERO Command

Moves wiper to zero-scale position (0x00) and opens the H terminal. The wiper register remains unaltered. Writes cannot be made to the wiper register while shutdown mode is engaged. Clearing shutdown mode will return the wiper to the position contained in the wiper register and close

the H terminal. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

SD_H_MID Command

Moves wiper to midscale position (0x80) and opens the H terminal. The wiper register remains unaltered. Writes cannot be made to the wiper register while shutdown mode is engaged. Clearing shutdown mode will return the wiper to the position contained in the wiper register and close the H terminal. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

SD_H_FULL Command

Moves wiper to full-scale position (0xFF) and opens H terminal. The wiper register remains unaltered. Writes cannot be made to the wiper register while shutdown mode is engaged. Clearing shutdown mode will return the wiper to the position contained in the wiper register and close the H terminal. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

SD_L_WREG Command

Opens the L terminal and maintains the wiper at the wiper register location. Writes cannot be made to the wiper register while shutdown mode is engaged. Clearing shutdown mode will close the L terminal and allow wiper

register to be written. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

SD_L_ZERO Command

Moves wiper to zero-scale position (0x00) and opens the L terminal. The wiper register remains unaltered. Writes cannot be made to the wiper register while shutdown mode is engaged. Clearing shutdown mode will return the wiper to the position contained in the wiper register and close the L terminal. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

SD_L_MID Command

Moves wiper to midscale position (0x80) and opens the L terminal. The wiper register remains unaltered. Writes cannot be made to the wiper register while shutdown mode is engaged. Clearing shutdown mode will return the wiper to the position contained in the wiper register and close the L terminal. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

SD_L_FULL Command

Moves wiper to full-scale position (0xFF) and opens the L terminal. The wiper register remains unaltered. Writes cannot be made to the wiper register while shutdown mode is engaged. Clearing shutdown mode will return the wiper

to the position contained in the wiper register and close the L terminal. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

SD_W Command

Opens the W terminal keeping the internal tap position the same as the wiper register. Writes cannot be made to the wiper registers while shutdown mode is engaged. Clearing shutdown mode will return the wiper to the position contained in the wiper register and close W terminal. A RST will also deassert shutdown mode and return the wiper to midscale (0x80). This command does not affect the charge-pump status.

QP_ON Command

Enables the onboard charge pump to allow low-supply voltage operation. This is the power-on default condition. Low supply voltage is 1.7V.

QP_OFF Command

Disables the on-board charge pump and places device in low power mode. Low supply voltage is limited to 2.6V.

RST Command

Returns device to power-on default conditions. Resets the wiper register to midscale (0x80), enables charge pump, and deasserts any shutdown modes.

Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the *Electrical Characteristics* table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
