

# MAX4908/MAX4909/ MAX4930/MAX4932

# Dual 3:1 Clickless Audio Multiplexers with Negative-Signal Handling

## General Description

The MAX4908/MAX4909/MAX4930/MAX4932 dual 3:1 clickless audio multiplexers feature negative-signal capability that allows signals as low as  $V_{CC} - 5.5V$  to pass through without distortion. These analog multiplexers have a low on-resistance ( $0.38\Omega$ ), low supply current, and operate from a single +1.8V to +5.5V supply.

The MAX4908 has shunt resistors on all input terminals, and the MAX4909 has shunt resistors on all input terminals except X0 and Y0. The MAX4930 has shunt resistors only on the X2 and Y2 terminals, and the MAX4932 has no shunt resistors. The shunt resistor feature reduces click-and-pop sounds by automatically discharging the capacitance at the input terminal when they are not connected. A break-before-make feature further reduces popping.

The MAX4908/MAX4909/MAX4930/MAX4932 use two digital control inputs CB1 and CB2 to switch between signals. The digital control inputs can accept up to +5.5V independent of the supply voltage.

The MAX4908/MAX4909/MAX4930/MAX4932 are available in 12-bump wafer-level package (WLP) and 14-pin TDFN-EP package and operate over the  $-40^{\circ}C$  to  $+85^{\circ}C$  extended temperature range.

## Applications

- Cell Phones
- PDAs and Handheld Devices
- Notebook Computers
- MP3 Players

## Benefits and Features

- Distortion-Free Negative Signal Throughput Down to  $V_{CC} - 5.5V$
- Internal Shunt Resistors Reduce Click-and-Pop Sounds
- High PSRR Reduces Supply Noise
- Low On-Resistance:  $0.38\Omega$  (typ)
- Channel-to-Channel Matching:  $0.1\Omega$  (max)
- On-Resistance Flatness:  $0.35\Omega$  (max)
- Single +1.8V to +5.5V Supply Voltage
- $-70dB$  (typ) Crosstalk (20kHz)
- $-80dB$  (typ) Off-Isolation (20kHz)
- 0.02% (typ) Total Harmonic Distortion
- 50nA Leakage Current
- 50nA Supply Current

### Absolute Maximum Ratings

(All voltages referenced to GND.)

V <sub>CC</sub> , CB <sub>-</sub> .....	-0.3V to +6.0V
X, X <sub>-</sub> , Y, Y <sub>-</sub> .....	(V <sub>CC</sub> - 6V) to (V <sub>CC</sub> + 0.3V)
Continuous Current X, X <sub>-</sub> , Y, Y <sub>-</sub> .....	±300mA
Peak Current X, X <sub>-</sub> , Y, Y <sub>-</sub> (pulsed at 1ms, 50% Duty Cycle) .....	±400mA
Peak Current X, X <sub>-</sub> , Y, Y <sub>-</sub> (pulsed at 1ms, 10% Duty Cycle) .....	±500mA

Continuous Power Dissipation (T <sub>A</sub> = +70°C) 12-Bump WLP (derate 8.5mW/°C above +70°C) .....	678mW
14-Pin TDFN, Single-Layer Board (derate 18.5mW/°C above +70°C) .....	1482mW
14-Pin TDFN, Multilayer Board (derate 24.4mW/°C above +70°C) .....	1951mW
Operating Temperature Range .....	-40°C to +85°C
Junction Temperature .....	+150°C
Storage Temperature Range .....	-65°C to +150°C
Lead Temperature (soldering, 10s) .....	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### Electrical Characteristics

(V<sub>CC</sub> = +2.7V to +5.5V, T<sub>A</sub> = -40°C to +85°C, unless otherwise noted. Typical values are at V<sub>CC</sub> = +3.0V, T<sub>A</sub> = +25°C.) (Note 1)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
<b>POWER SUPPLY</b>

<b>DIGITAL INPUTS (<math>CB_{-}</math>)</b>						
Input Logic-High	$V_{IH}$		1.4			V
Input Logic-Low	$V_{IL}$				0.5	V
Input Leakage Current	$I_{CB}$	$V_{CB_{-}} = 0V$ or $V_{CC}$	-1		+1	$\mu A$

**Note 1:** All parameters are production tested at  $T_A = +25^{\circ}C$  and guaranteed by design over the specified temperature range.

**Note 2:** Signals on X, Y,  $X_{-}$ , or  $Y_{-}$  exceeding  $V_{CC}$  are clamped by internal diodes. Limit forward-diode current to maximum current rating.

**Note 3:** Guaranteed by design; not production tested.

**Note 4:**  $\Delta R_{ON} = R_{ON(MAX)} - R_{ON(MIN)}$ .

**Note 5:** Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges.

**Note 6:** X Off-Isolation =  $20\log_{10} [V_X / V_{X_{-}}]$ ,  $V_X$  = output,  $V_{X_{-}}$  = input to off switch. Y Off-Isolation =  $20\log_{10} [V_Y / V_{Y_{-}}]$ ,  $V_Y$  = output,  $V_{Y_{-}}$  = input to off switch.

Typical Operating Characteristics

( $V_{CC} = 3.0V$ ,  $T_A = +25^\circ C$ , unless otherwise noted.)

Typical Operating Characteristics (continued)

( $V_{CC} = 3.0V$ ,  $T_A = +25^\circ C$ , unless otherwise noted.)

### Bump Configurations

### Bump Descriptions

PIN		NAME	FUNCTION
TDFN-EP	WLP		
1	B4	VCC	Positive Supply Voltage Input
2	C4	X	Analog Output X Common Terminal
3,10	—	N.C.	No Connection. Not internally connected.
4	C3	X2	Analog Input X2
5	C2	X1	Analog Input X1
6	B2	CB1	Digital Control Input 1
7	C1	X0	Analog Input X0
8	B1	GND	Ground
9	A1	Y0	Analog Input Y0

12	A3	Y2	Analog Input Y2
13	B3	CB2	Digital Control Input 2
14	A4	Y	Analog Output Y Common Terminal
—	—	EP	Exposed Pad. Connect to ground or leave unconnected.

## Detailed Description

The MAX4908/MAX4909/MAX4930/MAX4932 dual 3:1 clickless audio multiplexers are low 0.38Ω (typ) on-resistance, low 150nA (typ) supply current, high power-supply rejection ratio (PSRR) devices that operate from a +1.8V to +5.5V single supply. These devices feature a negative signal capability that allows signals below GND to pass through without distortion and break-before-make switching.

The MAX4908/MAX4909/MAX4930/MAX4932 use two digital control bits CB1 and CB2 to switch between signals (see [Table 1](#)). The MAX4908 has shunt resistors on all the unselected terminals to suppress click-and-pop sounds that may occur from switching to a precharged terminal. The MAX4909 does not have click-and-pop suppression resistors on X0 and Y0 terminals for applications that do not require predischARGE switching. The MAX4930 only has shunt resistors on X2 and Y2 terminals. The MAX4932 has no shunt resistors on all terminals.

**Table 1. Truth Table**

CB1	CB2	COMMON X	COMMON Y
0	0	High Impedance	High Impedance
0	1	Connected to X0	Connected to Y0
1	0	Connected to X1	Connected to Y1
1	1	Connected to X2	Connected to Y2

## Applications Information

### Digital Control Inputs

The MAX4908/MAX4909/MAX4930/MAX4932 logic inputs accept up to +5.5V regardless of supply voltage. For example, with a +3.3V supply, CB\_ can be driven low to GND and high to +5.5V, allowing for mixing of logic levels in a system. Driving CB\_ rail-to-rail minimizes power consumption. For a +3.3V supply voltage, the logic thresholds are +0.5V (low) and +1.4V (high).

### Analog Signal Levels

These devices have a low on-resistance of 0.38Ω (typ) and the on-resistance flatness is guaranteed over temperature and will show minimal variation over the entire voltage supply range (see the [Typical Operating Characteristics](#)). The on-resistance flatness and low-leakage features make it ideal for bidirectional operation. The switches are bidirectional, so X\_, Y\_, and common terminals X and Y pins can be either inputs or outputs.

These devices pass signals as low as  $V_{CC} - 5.5V$ , including signals below ground with minimal distortion.

## Click-Pop Suppression

The MAX4908 has a 3.8kΩ (typ) shunt resistor on all of its input terminals to automatically discharge any capacitance when they are not connected to common terminal X and Y. The MAX4909 has shunt resistors on all terminals except X0 and Y0. The MAX4930 only has shunt resistors on X2 and Y2. The shunt resistors reduce audible click-and-pop sounds that occur when switching between audio sources.

Audible clicks and pops are caused when a step DC voltage is switched into the speaker. The DC step transients can be reduced by automatically discharging the side that is not connected to the common terminal, thus reducing any residual DC voltage and clicks and pops.

## Break-Before-Make Switching

The MAX4908/MAX4909/MAX4930/MAX4932 feature break-before-make switching, which is configured to break (open) the first set of contacts before engaging (closing) the new contacts. This prevents the momentary connection of the old and new signal paths to the output, further reducing click-and-pop sounds.

## Power-Supply Sequencing and Overvoltage Protection

**Caution: Do not exceed the Absolute Maximum Ratings since stresses beyond the listed ratings may cause permanent damage to the device.**

Proper power-supply sequencing is recommended for all CMOS devices. Improper supply sequencing can force the switch into latchup, causing it to draw excessive supply current. The only way out of latchup is to recycle the power and reapply properly. Connect all ground pins first, apply power to  $V_{CC}$ , and finally apply signals to X\_, Y\_, and common terminals. Follow the reverse order upon power-down.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
