Pull Force should be measured with no influence from the insulation crimp.

The above specifications are guidelines to an optimum crimp.

* This applicator was qualified to the above specifications with THHN stranded wires and TFN solid bare wires.

* All Applications exceeding 12 AWG singles, consult Molex Product Engineering.

* Crimping double wires or exceeding maximum insulation diameter specifications may cause terminal insulation grips to score or pierce thru wire insulation.

* To achieve optimum performance on double wire applications, smallest wire AWG and solid wire should be positioned in the bottom of the terminal.

NOTES

1. Molex recommends an extra perishable tooling kit be maintained at your facility.
2. Verify tooling alignment by manually cycling the press with applicator before crimping under power. Check that all screws are tight.
3. Slugs, terminals, dirt, and oil should be kept clear of work area.
4. Wear safety glasses at all times.
5. For recommended maintenance refer to the Mini-Mac Applicator Manual (Document no. 63880-0000).

CAUTION: This applicator should only be used in a press with a shut height of 135.80 mm (5.346"). Tooling damage could result at a lower setting.

CAUTION: To prevent injury, never operate this applicator without the guards supplied with the press or wire-processing machine in place. Reference the press or wire processing manufacturer's instruction manual.

CAUTION: Molex crimp specifications are valid only when used with Molex terminals, applicators and tooling.
