DESCRIPTION

The SY89830U is a high-speed, 2.5GHz differential PECL 1:4 fanout buffer optimized for ultra-low skew applications. Within device skew is guaranteed to be less than 25ps over temperature and supply voltage. The wide supply voltage operation allows this fanout buffer to operate in 2.5V, 3.3V, and 5V systems.

The SY89830U features a 2:1 input MUX, making it an ideal solution for redundant clock switchover applications. If only one input pair is used, the other pair may be left floating. In addition, this device includes a synchronous enable pin that forces the outputs into a fixed logic state. Enable or disable state is initiated only after the outputs are in a LOW state, thus eliminating the possibility of a "runt" clock pulse.

The SY89830U I/O are fully differential and 100K ECL compatible. Differential 10K ECL logic can interface directly into the SY89830U inputs.

The SY89830U is part of Micrel's high-speed precision edge timing and distribution family. For applications that require a different I/O combination, consult the Micrel website at www.micrel.com, and choose from a comprehensive product line of high-speed, low-skew fanout buffers, translators, and clock generators.

- f_{MAX} is defined as the maximum toggle frequency. Measured with 750mV input signal, 50% duty cycle, output swing $\geq 400mV$ (diff), all loading with 50Ω to $V_{CC}-2V$.
- Skew is measured between outputs under identical transitions.
- Set-up and hold times apply to synchronous applications that intend to enable/disable before the next cycle. For asynchronous applications, set-up and hold time does not apply.
- Cycle-to-cycle jitter definition: The variation in period between adjacent cycles over a random sample of adjacent cycle pairs. $T_{JITTER_CC} = T_n - T_{n+1}$ where T is the time between rising edges of the output signal.
- Total jitter definition: with an ideal clock input applied to one channel of the MUX, no more than one output edge in 10^{12} output edges will deviate by more than the specified peak-to-peak jitter value.
