

High temperature 8 A Snubberless™ Triacs

Datasheet - production data

Applications

Especially designed to operate in high power density or universal motor applications such as vacuum cleaner and washing machine drum motor, these 8 A Triacs provide a very high switching capability up to 150 °C junction temperatures.

The heatsink can be reduced, compared to traditional Triac, according to the high performance at given junction temperatures.

Description

Available in through-hole or surface mount packages, these Triacs series are suitable for general purpose mains power ac switching.

By using an internal ceramic pad, they provide voltage insulation (rated at 2500 V_{RMS}).
