Technical Paper – mediaCON USB-C Cable

Title: NTP10

© NEUTRIK AG. All rights reserved.

Subject:

This technical paper covers the general NEUTRIK USB 3.1 Type-C cable requirements of mechanical, electrical, environmental and performance characteristics.

This documentation describes the results of the test series conducted at Neutrik AG and USB-C cable manufacturer.

The tests were carried out in accordance with the following Standard regulations:

- ANSI/EIA 364-C

Electrical Connector/Socket Test Procedures Including Environmental Classifications, approved 1994. Available in hard copy – reference search site <http://www.nssn.org/information.html>

- EIA-364-1000.01

Environmental Test Methodology for Assessing the Performance of Electrical Connectors and Sockets Used in Business Office Applications

- USB 2.0

Universal Serial Bus Specification, Revision 2.0. This specification is available on the World Wide Web site <http://www.usb.org>

- USB 3.1

Universal Serial Bus Specification, revision 3.1. This specification is available on the World Wide Web site <http://www.usb.org>.

- USB Type-C

Universal Serial Bus Type-C Cable Specification, Revision 1.1 (also referred to as the USB Type-C Specification). This specification is available on the World Wide Web site <http://www.usb.org>.

NEUTRIK AG is not to be held liable for statements and declarations given in this technical paper.

NEUTRIK AG explicitly exonerates itself from all liability for mistakes in this white paper.

1 Mechanical

1.1 Durability Test

Test Conditions	Performance Requirement
<p>EIA 364-09</p> <p>The durability test shall be done at a maximum rate of 200 cycles per hour and no physical damage to any part of the connector and cable assembly shall occur.</p>	<p>For all cable assembly :</p> <p>USB Type-C: 10'000 cycles</p> <ul style="list-style-type: none"> • Insertion Force: 20 N Max. • Extraction Force: 6 N to 20 N

1.2 Cable Flexing Test

Test Conditions	Performance Requirement
<p>EIA 364-41, Condition 1</p> <p>Dimension X= 3.7 times cable diameter and 100 cycles in each of two planes 120 degree arc.</p>	<ol style="list-style-type: none"> 1. No physical damage. 2. No discontinuity over 1 microsecond during flexing.

1.3 Cable Pull-Out Test

Test Conditions	Performance Requirement
<p>EIA 364-38, Test Condition A</p> <p>The cable assembly shall be subjected to a 40 N axial load for a minimum of 1 minute.</p>	<ol style="list-style-type: none"> 1. No physical damage. 2. No electrical discontinuity over 1 microsecond to the cable assembly.

1.4 4-Axis Continuity Test

Test Conditions	Performance Requirement
<p>The USB Type-C connector family shall be tested for continuity under stress using the test configurations shown below</p>	<p>Test in 4 different directions (left, right, up, down) Fixture device at 90 degree angle 8 N tensile force shall be applied to the cable in a downward direction, perpendicular to the axis of insertion, for a period of at least 10 seconds.</p>

figure 1: Axis Continuity Test

2 Electrical

2.1 SuperSpeed Pair Raw Cable Differential Impedance

Test Conditions

The SuperSpeed pair impedance is measured at the rise time to be 200 ps (10%-90%) entering the reference plane.

Performance Requirement

For all cable assembly:

- 85 Ω to 95 Ω for Gen.2 application
- 83 Ω to 97 Ω for Gen.1 application

2.2 SuperSpeed Pair Mated Connector Differential Impedance

Test Conditions

The differential impedance is measured at the defined rise time entering the reference plane. The definition of rise time:

- 40ps (20%-80%) for Gen.2 speed
- 50ps (20%-80%) for Gen.1 speed

Performance Requirement

For all cable assembly :

USB Type-C: 85 $\Omega \pm 9 \Omega$

2.3 Insertion Loss Fit at Nyquist Frequency: ILfitatNq

Test Conditions	Performance Requirement
<p>Normalized with mated connector $85\pm 9 \ \Omega$ and raw cable $90\pm 5 \ \Omega$ differential impedance.</p>	<p>Type-C to Type-C:</p> <ul style="list-style-type: none"> For all USB 3.1 Gen.2 pairs: <ul style="list-style-type: none"> $\geq -4 \text{ dB}$ at 2.5 GHz $\geq -6 \text{ dB}$ at 5 GHz $\geq -11 \text{ dB}$ at 10 GHz For USB 3.1 Gen.1 cable assembly: <ul style="list-style-type: none"> $\geq -7 \text{ dB}$ at 2.5 GHz $\geq -12 \text{ dB}$ at 5 GHz Type-C to Legacy Cable: <ul style="list-style-type: none"> $\geq -4 \text{ dB}$ at 2.5GHz, $\geq -6 \text{ dB}$ at 5GHz, Type-C to Legacy Adaptor: <ul style="list-style-type: none"> $\geq -4 \text{ dB}$ at 2.5 GHz $\geq -3.5 \text{ dB}$ at 5 GHz

figure 2: Illustration of Insertion Loss

2.4 Integrated Multi-Reflection: IMR

Test Conditions

It measures the ripple of the insertion loss, caused by multiple reflections inside the cable assembly (mated with the fixture).

$V_{in}(f)$ is the input trapezoidal pulse spectrum with $T_b = \text{Unit interval} = 100 \text{ ps}$, $T_r = 0 \text{ to } 100\% \text{ rise time} = 0.4 * T_b$

Performance Requirement

The IMR limit is specified as a function of $IL_{fitatNq}$:

- Type-C to Type-C:
 $IMR \leq 0.126 * IL_{fitatNq}^2 + 3.024 * IL_{fitatNq} - 23.392$ in dB.
- Type-C to Legacy:
 $IMR \leq 0.126 * IL_{fitatNq}^2 + 3.024 * IL_{fitatNq} - 21.392$ in dB.
- Type-C to Legacy Adaptor:
 $IMR \leq -34 \text{ dB}$ for $T_b = 200 \text{ ps}$ and $\leq -27 \text{ dB}$ for $T_b = 100 \text{ ps}$.

figure 3: IMR Limit as Function of $IL_{fitatNq}$

2.5 Integrated Crosstalk on SS pairs: INEXT and ISSXT

Test Conditions

The integration shall be done for each NEXT and FEXT between USB SuperSpeed pairs.

Performance Requirement

The IMR limit is specified as a function of $IL_{fitatNq}$:

- Type-C to Type-C:
 $INEXT \leq -40 \text{ dB to } 12.5 \text{ GHz}$
 $IFEXT \leq -40 \text{ dB to } 12.5 \text{ GHz}$
- Type-C to Legacy:
 $ISSXT \leq -38 \text{ dB}$
- Type-C to Legacy Adaptor:
 $ISSXT \leq -37 \text{ dB}$

2.6 Integrated Crosstalk on SS pairs and D+/D- pairs: IDDXT_1NEXT+FEXT and IDDXT_2NEXT

Test Conditions	Performance Requirement
The integration shall be done for each NEXT and FEXT between USB SuperSpeed pairs.	<ul style="list-style-type: none"> Type-C to Type-C: $IDDXT_1NEXT+FEXT \leq -34.5$ dB $IDDXT_2NEXT \leq -33$ dB <p>For all SuperSpeed pairs.</p>

2.7 Integrated Differential Crosstalk D+/D- pairs: IDDXT

Test Conditions	Performance Requirement
The integration shall be done for each NEXT and FEXT between USB HighSpeed pairs.	<ul style="list-style-type: none"> Type-C to Legacy Adapter: ≤ -23 dB

2.8 Integrated Return Loss: IRL

Test Conditions	Performance Requirement
The integrated return loss manages the reflection between the cable assembly and the rest of the system (host and device).	<p>The IRL limit is specified as a function of ILfitatNq :</p> <ul style="list-style-type: none"> Type-C to Type-C: $IRL \leq 0.046 * ILfitatNq^2 + 1.812 * ILfitatNq - 10.784$ in dB. Type-C to Legacy: $IRL \leq 0.046 * ILfitatNq^2 + 1.812 * ILfitatNq - 9.784$ in dB. Type-C to Legacy Adaptor: $IRL \leq -14.5$ dB for $T_b=200$ ps and ≤ -12 dB for $T_b=100$ ps.

figure 4: IRL Limit at Function of ILfitatNq

2.9 Differential-to-Common Mode Conversion (SCD12/SCD21)

Test Conditions	Performance Requirement
Normalized with mated connector $85\pm 9 \Omega$ and raw cable $90\pm 5 \Omega$ differential impedance.	<ul style="list-style-type: none"> Type-C to Type-C: SCD12 ≤ -20 dB from 100 MHz to 10 GHz Type-C to Legacy: SCD12 ≤ -20 dB from 100 MHz to 10 GHz Type-C to Legacy Adaptor: SCD12 ≤ -15 dB from 100 MHz to 7.5 GHz

figure 5: Differential-to-Common Mode Conversion Requirement

2.10 D+/D- Pair Attenuation

Test Conditions	Performance Requirement
<p>EIA 364-101</p> <p>The measured frequency range should be from 50 MHz to 400 MHz with a frequency step of 10 MHz.</p>	<ul style="list-style-type: none"> Type-C to Type-C: <ul style="list-style-type: none"> ≥ -1.02 dB at 50 MHz ≥ -1.43 dB at 100 MHz ≥ -2.4 dB at 200 MHz ≥ -4.35 dB at 400 MHz Type-C to Legacy: <ul style="list-style-type: none"> ≥ -1.02 dB at 50 MHz ≥ -1.43 dB at 100 MHz ≥ -2.4 dB at 200 MHz ≥ -4.35 dB at 400 MHz Type-C to Legacy Adaptor: <ul style="list-style-type: none"> ≥ -0.7 dB at 400 MHz

2.11 D+/D- Pair Differential Impedance

Test Conditions	Performance Requirement
<p>The D+/D- pair impedance is measured at the rise time to be 400 ps (20%-80%) entering the reference plane.</p>	<p>75 Ω to 105 Ω</p>

2.12 D+/D- Pair Propagation Delay

Test Conditions	Performance Requirement
<p>EIA 364-103</p> <p>The D+/D- pair propagation delay is measured at the rise time to be 400 ps (20%-80%) entering the reference plane.</p> <p>The propagation delay is measured at the 50% voltage crossing of the received step response.</p>	<ul style="list-style-type: none"> Type-C to Type-C: 20 ns max

2.13 D+/D- Intra-Pair Skew

Test Conditions	Performance Requirement
<p>EIA 364-103</p> <p>The D+/D- pair propagation delay is measured at the rise time to be 400 ps (20%-80%) entering the reference plane.</p> <p>The intra-pair skew is measured at the 50% voltage crossing of the received step response.</p>	<ul style="list-style-type: none"> Type-C to Type-C: 100 ps max Type-C to Legacy: 100 ps max Type-C to Legacy Adaptor: 20 ps max

2.14 Coupling between CC and differential USB D+/D-

Test Conditions	Performance Requirement
<p>EIA 364-90</p> <p>The frequency range is from 300 KHz to 100 MHz. All the measured S-parameters are single-ended with a 50 Ω reference impedance.</p>	<ul style="list-style-type: none"> Type-C to Type-C: ≤ -60.5 dB at 0.3 MHz ≤ -50 dB at 1 MHz ≤ -26 dB at 16 MHz ≤ -26 dB at 100 MHz

2.15 Coupling between VBUS and differential USB D+/D-

Test Conditions	Performance Requirement
<p>EIA 364-90</p> <p>The frequency range is from 300 KHz to 100 MHz. All the measured S-parameters are single-ended with a 50 Ω reference impedance.</p>	<ul style="list-style-type: none"> Type-C to Type-C: <ul style="list-style-type: none"> ≤ -40 dB for 0.3 MHz < f ≤ 30 MHz, and ≤ 19.12 log₁₀(f/30)-40 (in dB) for 30 MHz < f ≤ 100 MHz

2.16 Single ended Coupling between SBU_A and CC,SBU_B and CC

Test Conditions	Performance Requirement
<p>EIA 364-90</p> <p>The frequency range is from 300 KHz to 100 MHz. All the measured S-parameters are single-ended with a 50 Ω reference impedance.</p>	<ul style="list-style-type: none"> Type-C to Type-C: <ul style="list-style-type: none"> ≤ -65 dB at 0.3 MHz ≤ -55 dB at 1 MHz ≤ -30 dB at 18 MHz ≤ -30 dB at 100 MHz

2.17 Single-ended Coupling between CC and D-

Test Conditions	Performance Requirement
<p>EIA 364-90</p> <p>The frequency range is from 300 KHz to 100 MHz. All the measured S-parameters are single-ended with a 50 Ω reference impedance.</p>	<ul style="list-style-type: none"> For USB 2.0 Type-C to Type-C: <ul style="list-style-type: none"> ≤ -65 dB at 0.3 MHz ≤ -55 dB at 1 MHz ≤ -30 dB at 18 MHz ≤ -30 dB at 100 MHz For USB Full-Featured Type-C to Type-C <ul style="list-style-type: none"> ≤ -58 dB at 0.3 MHz ≤ -27.5 dB at 10 MHz ≤ -26 dB at 11.8 MHz ≤ -26 dB at 100 MHz

2.18 Single-ended Coupling between SBU_A and SBU_B

Test Conditions	Performance Requirement
<p>EIA 364-90</p> <p>The frequency range is from 300 KHz to 100 MHz. All the measured S-parameters are single-ended with a 50 Ω reference impedance.</p>	<ul style="list-style-type: none"> For Type-C to Type-C: <ul style="list-style-type: none"> ≤ -56.5 dB at 0.3 MHz ≤ -46 dB at 1 MHz ≤ -26 dB at 10 MHz ≤ -25 dB at 11.2 MHz ≤ -25 dB at 100 MHz

2.19 Coupling between SBU_A / SBU_B and differential USB D+/D-

Test Conditions	Performance Requirement
<p>EIA 364-90</p> <p>The frequency range is from 300 KHz to 100 MHz. All the measured S-parameters are single-ended with a 50 Ω reference impedance.</p>	<ul style="list-style-type: none"> For Type-C to Type-C: <ul style="list-style-type: none"> ≤ -80 dB at 0.3 MHz ≤ -40 dB at 30 MHz ≤ -40 dB at 100 MHz

2.20 Voltage Drop Test

Test Conditions	Performance Requirement
<p>The maximum rated VBUS current of the cable assembly shall be used.</p> <p>The measurement includes receptacles at both ends of the cable assembly, mounted on test fixtures.</p>	<p>250 mV max for GND and 500 mV max for VBUS.</p>

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
