

MAX17113 Evaluation Kit

Evaluates: MAX17113

General Description

The MAX17113 evaluation kit (EV kit) is a fully assembled and tested surface-mount PCB that provides the voltages and features required for thin-film transistor (TFT) liquid-crystal display (LCD) TV panels. The EV kit includes a step-down switching regulator, a step-up switching regulator, a positive two-stage charge pump for the TFT gate-on supply, and a negative single-stage charge pump for the TFT gate-off supply.

The MAX17113 EV kit operates from a DC supply voltage of +10.8V to +13.2V, as configured. The step-down switching regulator is configured for a +3.3V output providing at least 2A. The step-up switching regulator is configured for a +16V output providing at least 1.5A. The positive charge pump is configured for a +35V output providing at least 100mA. The negative charge pump is configured for a -6V output providing at least 100mA.

Features

- ◆ **+10.8V to +13.2V Supply Voltage**
- ◆ **Output Voltages**
 - +3.3V at 2A (Step-Down Switching Regulator)**
 - +16V at 1.5A (Step-Up Switching Regulator)**
 - +35V at 100mA (Positive Charge Pump)**
 - 6V at 100mA (Negative Charge Pump)**
- ◆ **Adjustable Output Voltages (External Resistors)**
- ◆ **Selectable Frequency (450kHz/600kHz)**
- ◆ **Low-Profile Surface-Mount Components**
- ◆ **Fully Assembled and Tested**

Quick Start

Recommended Equipment

- +10.8V to +13.2V DC power supply
- Digital multimeters (DMMs)

Procedure

The MAX17113 EV kit is fully assembled and tested. Follow the steps below to verify board operation.

Caution: Do not turn on the power supply until all connections are completed.

- 1) Preset the power supply to +12V and disable the output.
- 2) Connect the positive terminal of the power supply to the VIN pad. Connect the negative terminal of the power supply to the PGND pad closest to VIN.
- 3) Verify that the jumpers follow the default settings in Table 1.
- 4) Turn on the power supply.
- 5) Verify that the step-up switching regulator output (AVDD) is approximately +16V.

6) Verify that the step-down switching regulator output (OUT) is approximately +3.3V.

7) Verify that the gate-on supply (VGON) is approximately +35V.

8) Verify that the gate-off supply (VGOFF) is approximately -6V.

Detailed Description of Hardware

The MAX17113 EV kit contains a step-down switching regulator, a step-up switching regulator, a positive dual-stage charge pump, a negative single-stage charge pump, a dual-mode logic-controlled high-voltage switch control block, and an adjustable-timing power-good output. Although the MAX17113 IC can operate from input voltages between +8V and +16.5V, the EV kit is optimized for LCD TV panel and LCD monitor applications running directly from +12V supplies.

Output Voltage Selection

Step-Down Regulator Output-Voltage Selection (OUT)

In the default fixed-mode configuration (FB2 pulled to AGND by R19), the step-down regulator provides a +3.3V output (OUT). In adjustable mode, the output voltage (1.5V to 5V) of the step-down regulator is set by connecting a resistive voltage-divider from the output (OUT) to AGND with the center tap connected to FB2. Calculate R18 with the following equation:

$$R18 = R19 \times \left(\frac{V_{OUT}}{V_{FB2}} - 1 \right)$$

where VFB2, the step-down regulator's feedback set point, is 1.25V.

MAX17113 Evaluation Kit

Step-Up Regulator Output-Voltage Selection (AVDD)

The output voltage (VIN to 18V) of the main step-up regulator is set by connecting a resistive voltage-divider from the output (AVDD) to AGND with the center tap connected to FB1. Calculate R3 with the following equation:

$$R3 = R4 \times \left(\frac{V_{AVDD}}{V_{FB1}} - 1 \right)$$

where V_{FB1}, the step-up regulator's feedback set point, is 1.25V.

Positive Charge-Pump Output Output-Voltage Selection (VGON)

The positive charge-pump output (VGON) is set to +35V by voltage-divider resistors R16 and R17. To set VGON to other voltages (up to approximately 3 x AVDD, 44V max), select different divider resistors. For voltages below 2 x AVDD, change the shunt position of JU7 to 1-2. Refer to the *Design Procedure, Charge-Pump Regulators, Output-Voltage Selection* section in the MAX17113 IC data sheet for instructions on selecting resistors R16 and R17.

Negative Charge-Pump Output Output-Voltage Selection (VGOFF)

The negative charge-pump output (VGOFF) is set to -6V by voltage-divider resistors R1 and R2. To set VGOFF to other voltages (0V to -VIN), select different divider

resistors. For VGOFF less than -16V, select C15 with a higher voltage rating. Refer to the *Design Procedure, Charge-Pump Regulators, Output-Voltage Selection* section in the MAX17113 IC data sheet for instructions on selecting resistors R1 and R2.

Jumper Selection

Several jumper settings in the following tables illustrate features of the MAX17113 EV kit.

Frequency Select Input (FSEL)

The MAX17113 EV kit features jumper JU1 to control the switching regulator's operating frequency. Connect FSEL to AGND for 450kHz operation. Connect FSEL to VL for 600kHz operation. See Table 2 for jumper JU1 functions.

High-Voltage Switch Mode (MODE)

The MAX17113 EV kit features an option to select the operating mode (delay or no delay) for the high-voltage switches. On the rising edge of the CTL pin, GON connects to SRC. On CTL's falling edge, GON may connect immediately to DRN (no delay), or to DRN after a delay set by C9. Refer to the *High-Voltage Switch Control* section in the MAX17113 IC data sheet for a more detailed description of the two modes of operation. Jumper JU2 selects the high-voltage switch operating mode for the MAX17113. Table 3 lists the selectable JU2 jumper options.

Table 2. Jumper JU1 Functions

SHUNT POSITION	FSEL PIN	OPERATION OF FREQUENCY (kHz)
Installed	Connected to VL	600
Not installed*	Connected to AGND (through internal 1MΩ pulldown resistor)	450

*Default position.

Table 3. Jumper JU2 Functions

SHUNT POSITION	MODE PIN	HIGH-VOLTAGE SWITCH MODE
1-2	Connected to C9	Delay set by C9
2-3*	Connected to VL	No delay
Not installed	Unconnected	Not allowed

*Default position.

Table 4. Jumper JU3 and JU4 Functions

SHUNT POSITION		STEP-DOWN AND NEGATIVE CHARGE-PUMP REGULATOR	STEP-UP AND POSITIVE CHARGE-PUMP REGULATOR
JU3	JU4		
Installed*	Installed*	Enabled	Enabled
Installed	Not installed	Enabled	Disabled
Not installed	X	Disabled	Disabled

*Default position.

X = Don't care.

MAX17113 Evaluation Kit

Evaluates: MAX17113

Enable-Control Inputs (EN1, EN2)

The MAX17113 EV kit features jumpers JU3 and JU4 to control the two switching regulators and the two charge-pump regulators' enable inputs. Jumper JU3 controls the step-down and negative charge-pump regulator enable input (EN1). Jumper JU4 controls the step-up and positive charge-pump regulator enable input (EN2). EN2 is inactive when EN1 is low. See Table 4 for jumper JU3 and JU4 functions.

High-Voltage Switch-Control Input (CTL)

Jumper JU5 configures the setting to control the high-voltage switch-control pin (CTL) of the MAX17113 IC. The switch between the SRC and GON pins and the switch between the GON and DRN pins can also be controlled by an external logic controller connected to the CTL pad. See Table 5 for switch states and refer to the *High-Voltage Switch Control* section in the MAX17113 IC data sheet for further information about the high-voltage switches connected to the GON pin.

Table 5. Jumper JU5 Functions

SHUNT POSITION	CTL PIN	MAX17113 HIGH-VOLTAGE SWITCH CONFIGURATION
Installed*	Connected to VL	GON connected to SRC
Not installed	Connected to AGND (through resistor R14)	GON connected to DRN
Not Installed (external logic controller connected to CTL pad)	External logic controller	GON pin connected to SRC pin (CTL driven high)
		GON pin connected to DRN pin (CTL driven low)

*Default position.

VGON Discharge Path

The MAX17113 EV kit features a method to configure the VGON discharge path using resistor R15 and jumper JU6. When CTL is low, GON is connected to DRN, allowing VGON to discharge through resistor R15. JU6 selects the discharge path by connecting R15 to AVDD (through diode D6) or to PGND. Table 6 lists the selectable JU6 jumper options.

Positive Charge-Pump Stage Selection

Jumper JU7 is provided to select between a positive dual-stage charge pump and a positive single-stage charge pump. Table 7 lists the selectable JU7 jumper options.

High-Voltage Switch-Control Block Output (GON)

Jumper JU8 is provided to connect or disconnect a bypass capacitor to the high-voltage switch-control block output GON terminal. Table 8 lists the selectable JU8 jumper options.

Table 6. Jumper JU6 Functions

SHUNT POSITION	DRN PIN	VGON DISCHARGED TOWARDS
1-2*	Connected to AVDD (through resistor R15 and diode D6)	AVDD
2-3	Connected to PGND (through resistor R15)	PGND

*Default position.

Table 7. Jumper JU7 Functions

SHUNT POSITION	POSITIVE CHARGE PUMP
1-2	Single-stage charge pump
2-3*	Dual-stage charge pump

*Default position.

Table 8. Jumper JU8 Functions

SHUNT POSITION	C21 BYPASS CAPACITOR
Installed	Enabled
Not installed*	Disabled

*Default position.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
