

Kinetis Microcontrollers

The most scalable portfolio of low power, mixed-signal MCUs based on the ARM Cortex-M4 architecture in the industry

November 4, 2010

Eduardo Montanez – Industrial & Multi-Market Systems Engineer

Kinetis Revolution: Cortex-M4 Microcontroller Portfolio Powered with Innovative 90nm TFS Flash Technology by Freescale

Freescale's 32-bit industrial and consumer microcontrollers are evolving into a new era with the launch of Kinetis. The first broad-market mixed signal microcontroller family based on the new ARM Cortex-M4 core and innovative 90nm thin-film storage (TFS) flash memory technology. With over 200 Kinetis MCUs, Freescale enables scalable performance, market-leading mixed-signal integration and ultra-low power consumption.

Agenda

- Portfolio Overview
- Key Differentiators
- Enablement Solutions
- Application Use Cases
- ► Technical Deep Dive
- Kinetis Solution Demonstration

New Kinetis MCUs Scalable Mixed-Signal Consumer and Industrial Microcontroller Families

Innovative Low Power 90nm The most scalable portfolio of low-power ARM Cortex-Thin-Film Storage Flash with M4 MCUs available today **FlexMemory** FlexMemory Over 200 hardware and software Offers EEPROM capability with Scalable compatible ARM Cortex-M4 unprecedented programming devices with high performance speed and endurance, capable of signal processing capability over 10 Million cycles and run currents of <200uA/MHz One of the most Exceptional mixed-signal Mixed comprehensive ARM[®] integration Enablement Signal enablement portfolios Flexible, High-speed, high-precision Complimentary Freescale MQX 16-bit ADCs, 12-bit DACs, RTOS and Eclipse-based Programmable Gain Amplifiers, **CodeWarrior** 10.0 IDE, as well as Voltage References, and Hardware IAR, KEIL and other ARM ecosystem Touch Sensing lower system providers help speed time to market More than 200 New Parts costs. 7 scalable families

First available broad-market MCU samples based on ARM Cortex-M4!

Kinetis Product Family Features

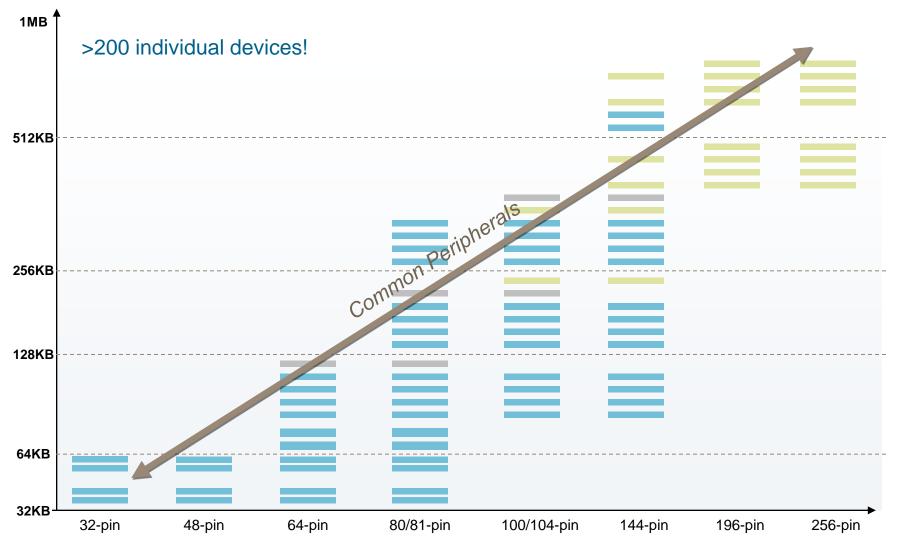

K70 Family 512KB-1MB,					Common System IP	Common Analog IP	Common Digital IP	Development Tools
196-256pin K60 Family 256KB-1MB.					32-bit ARM Cortex-M4 Core w/ DSP Instructions	16-bit ADC	CRC	Bundled IDE w/ Processor Expert
100-256pin					Next Generation		l ² C	·
K50 Family 128-512KB, 64-144pin					Flash Memory High Reliability, Fast Access	Programmable Gain Amplifiers	SAI (I ² S)	Bundled OS USB, TCP/IP, Security
K40 Family			1		FlexMemory w/		UART/SPI	Modular Tower H/ware
64-512KB,					EEPROM capability		–	Development
64-144pin					SRAM	12-bit DAC	Programmable Delay Block	System
K30 Family					Memory		External Bus	Application Software
64-512KB, 64-144pin					Protection Unit		Interface	Stacks, Peripheral
K20 Family 32KB-1MB,					Low Voltage, Low Power Multiple Operating Modes,	High-speed Comparators	Motor Control Timers	Drivers & App. Libraries (Motor Control,
32-144pin					Clock Gating		eSDHC	HMI, USB)
K10 Family					(1.71V-3.6V with 5V tolerant I/O)	Low-power	CODITO	
32KB-1MB, 32-144pin					DMA	Touch Sensing	RTC	Broad 3rd party ecosystem
			-					

-40 to 105C

K10/K20 Family Overview

High Integration Mixed-Signal MCUs

Processing Performance and FlexMemory

- Direct Memory Access, Cross Bar Switch, and onchip Cache maximize bus bandwidth and Flash execution
- FlexMemory provides on-chip, high-endurance configurable EEPROM and/or additional Flash memory

(K20 Only) Connect via USB AND charge a battery

- USB 2.0 Full-Speed Device/Host/OTG Controller with integrated transceiver, HS via ULPI interface
- Includes Device Charge Detector (DCD) and Regulator to supports battery charging via USB for Portable Devices

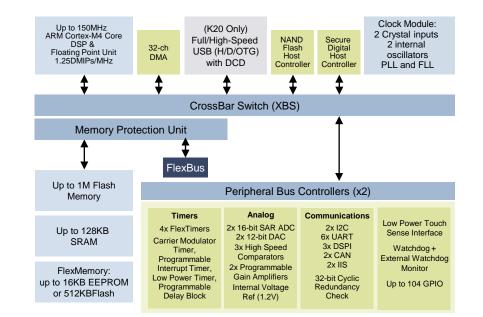

Flexible and Powerful Mixed Signal Capability

- 16-bit ADC enables small signal capture for medical/sensing applications, or high speed conversions for motor control.
- 12-bit DAC, High-Speed Comparator, and Voltage Reference on-chip reduces system cost

Ultra-low power with 1.71V operation

- Multiple low power modes and Flash & analog operation down to 1.71V – power profile optimization and prolonged battery life
- Stop Currents <500nA, run currents <200uA/MHz

32KB Flash in 32 pin package starting at \$0.99 for 10K SRP

Enablement Bundle

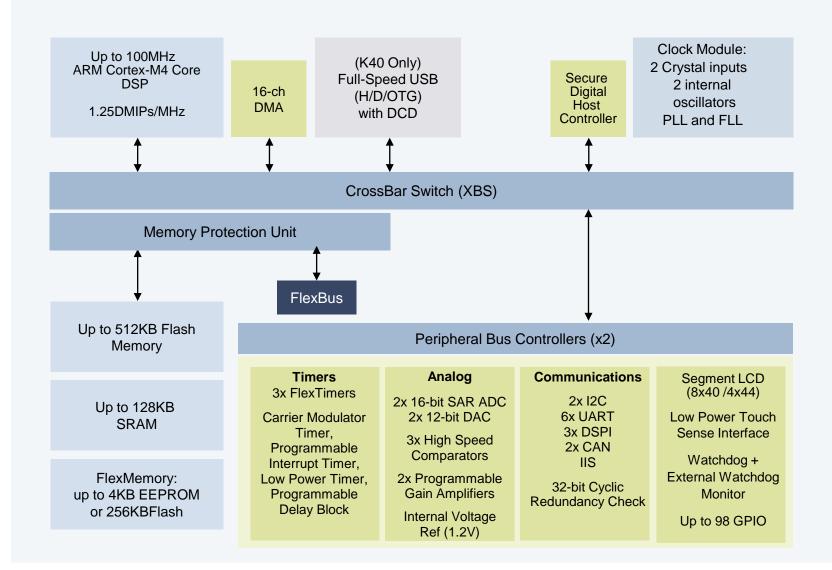

TOWER development system Complementary MQX RTOS with USB Stack Eclipse-Based CodeWarrior 10.0 IDE Processor Expert Rapid Application Development Tool IAR, Keil and full ARM Ecosystem Support Motor Control and DSP Libraries

K30/K40 Family Overview

For Segment LCD HMI Applications

Flexible, low power LCD Interface

- Segment LCD Blink mode lowers average power
- Segment Fail Detect prevents erroneous readouts and reduces LCD test cost
- Front/back plane reassignment provides pin-out flexibility and allows configuration changes in firmware

Diverse communications suite

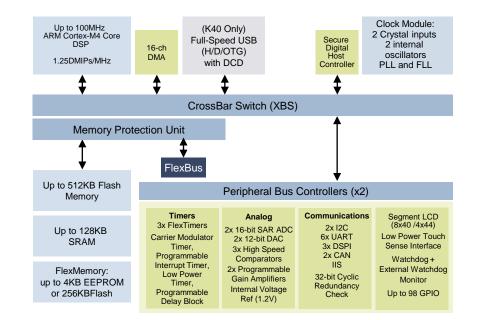

- A multitude of serial interfaces, with UART support for ISO7816 SIM/Smart Cards & IrDA interfaces
- Dual CAN for industrial network bridging

System reliability & safety

- Hardware Cyclic Redundancy Check safeguards memory contents and communication data
- Memory Protection Unit increase SW reliability
- Independently-clocked watchdog prevents code runaway for fail-safe applications e.g. IEC60730

Hardware and software compatibility

 Common packages & peripherals across families enable rapid feature growth with minimal hardware & software disruption

Enablement Bundle

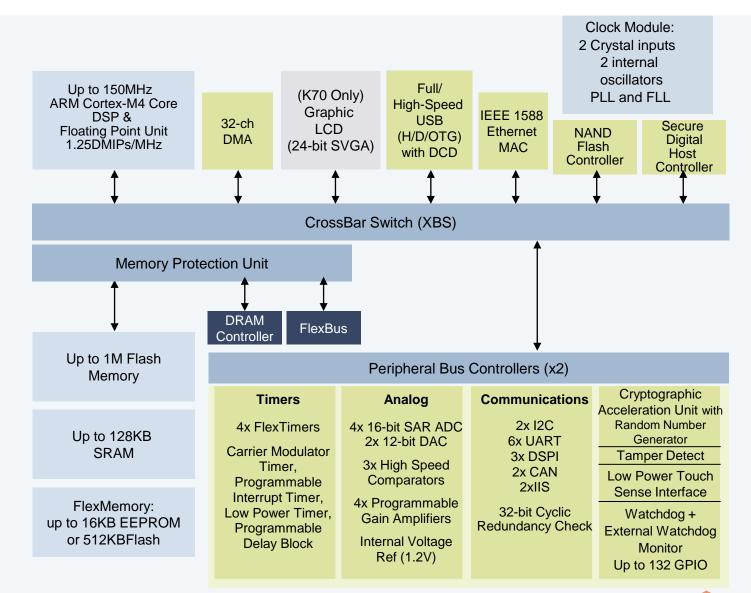

TOWER development system Complementary MQX RTOS with USB Stack Eclipse-Based CodeWarrior 10.0 IDE Processor Expert Rapid Application Development Tool IAR, Keil and Full ARM Ecosystem Support Motor Control Software Library, IEC60730 test routines

K60/K70 Family Overview

Higher Performance, Security, & Connectivity

Real-time Ethernet for precision automation

IEEE 1588 hardware time stamping & clock synchronization enables accurate, deterministic control over Ethernet networks

(K70 only) Graphical LCD for advanced user interfaces

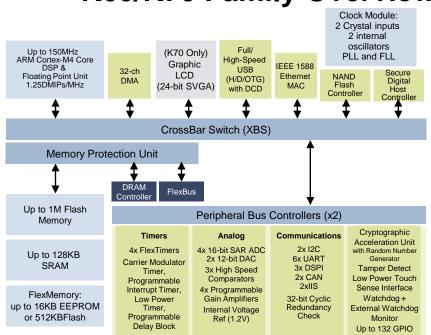

- Single-chip QVGA support possible, allowing use of lowercost displays without Chip-on-Glass capability
- Up to 24-bit SVGA with external memory support

Robust system security with tamper detection

 Tamper detection with voltage, frequency, and temperature monitoring. External sensor support for physical attack detection

Hardware Encryption for secure data transfer & storage

- Significantly faster than software implementations while consuming minimal system resources.
- Supports numerous algorithms with hardware assisted software routines – SSH, SSL, IPSec, etc

Enablement Bundle

What is FlexMemory?

Program or Data Flash:

User Configurable As...

EEPROM:

No external EEPROMs

Reduced system cost

No system resource impact

- System performance maintained
- No complex coding schemes

Configurable & high endurance

Up to 10 Million w/e cycles

High performance

- Fast write time = 100 usec
- Erase+write = 1.5msec

Use cases

- Critical data retention (power loss)
- Frequently updated data

► Flexibility Space for future expansion needs Contiguous with main program Main Program Flash Memory Efficient Read-while-write with the main program Flash Use cases Program Flash: bootloader code space Co-processo ElexRAM FlexNVN= Data Flash: large data tables Firmware **FlexMemory** Program/Data **EEPROM** Flash Or a combination of both

Freescale FlexMemory vs. Traditional EEPROM

Attribute	Traditional Embedded EEPROM	FlexMemory	
Read-while-write with program memory	Yes	Yes	
Granularity	Byte write/erase	Byte write/erase	
Write time	~1-5 msec (byte write only)	~100 µsec (byte or word program to erased location, brown-outs w/o loss or corruption of data)	
Erase + write time	~5-10 msec	~1.5 msec (byte or word erase and program)	
Endurance	50-300K cycles (fixed)	SoC implementation and user configurable, can exceed 10M cycles	
Minimum write voltage	≥ 2.0V	1.71V	
Flexibility	Fixed by part number	Programmable trade-off - quantity vs. endurance

Mixed Signal Integration

> 16-bit SAR ADCs

- > 1.15V minimum reference
- Differential or Single Ended
- > Averaging by 1, 4, 8, 16, or 32
- > Automatic Compare Function
- Triggering synchronization w/ DAC
- Configurable resolution, sample time, speed and power (8/10/12/16-bit resolution)
- Up to 20 input channels per converter

> Voltage Reference (Vref)

- Trimmable
- < 33ppm/°C temp variation</p>

> 12-bit DACs

- ➤ 16 word DAC FIFO
- Hardware or software trigger

> High Speed Comparators

- Programmable hysteresis control, and interrupt trigger
- Selectable inversion on comparator output
- Integrated 6-bit DAC for reference
- > Programmable Gain Amplifiers
 - ≻ x64 gain

Kinetis: Low Power Capabilities

Flexible power modes

> 10 Run, Wait & STOP modes – customise power usage to application requirements

Industry leading 90nm process technology

- > 1/3 dynamic power reduction vs. existing technologies
- Intelligent power management controller reduces dynamic and leakage currents

Low power design techniques

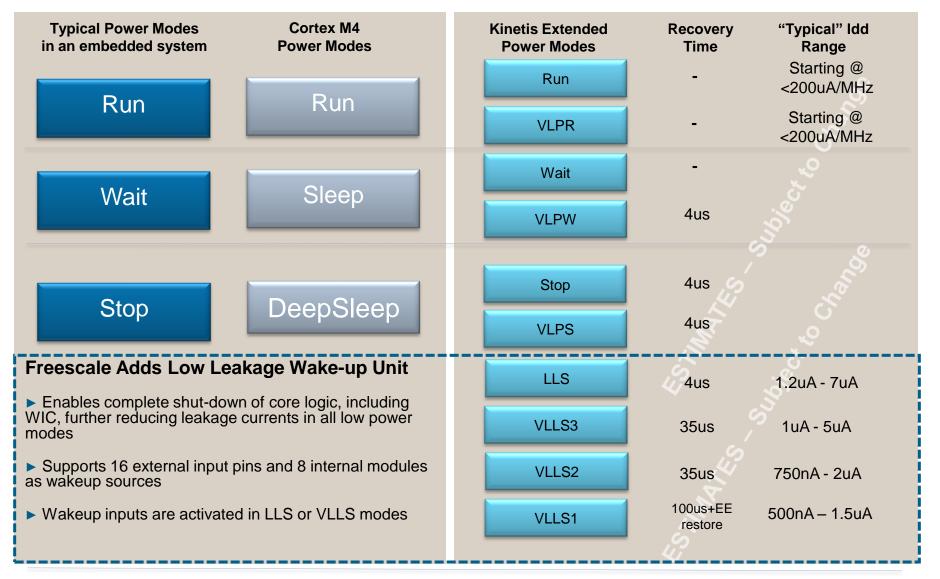

- Clock gating: only leakage currents are incurred
- Power gating: shuts down un-used modules reducing leakage

>Ultra fast wake up times

- > 4µs wake up from low leakage stop mode
- New Low Leakage Wake-up Unit for leakage current reduction

Kinetis Power Modes

ARM Cortex-M4 Processor Microarchitecture

Backwards compatible with ARM Cortex-M3

New features

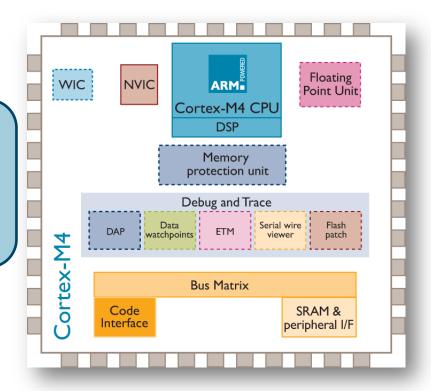

- Single cycle MAC (Up to 32 x 32, with 32-bit result)
- DSP extensions
- Single Precision Floating Point Unit

Freescale IP and Innovation

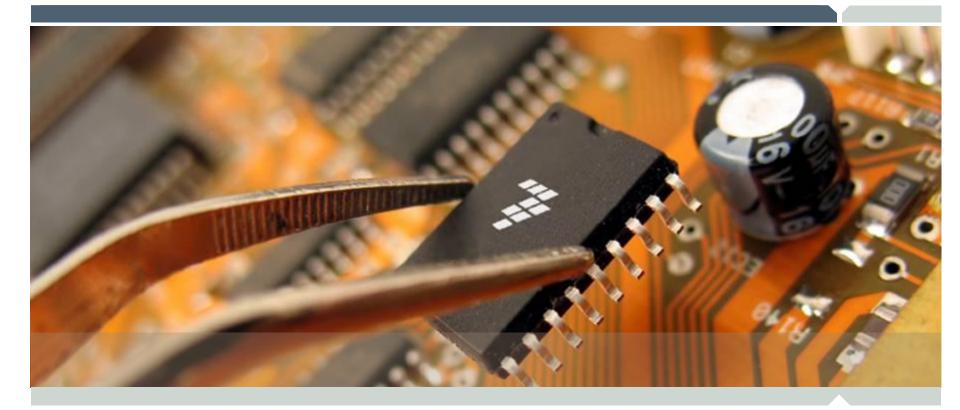

- On-chip cache for instructions and data
- Cross-Bar Switch for concurrent multi-master/slave accessing
- On-chip DMA for CPU off-load
- Low-leakage Wake-up Unit adds flexibility for low power operation

Architected for Digital Signal Processing

- Motor Control advanced algorithms, longer lifespan, power efficiency
- Automation high calculation and algorithm bandwidth at a low cost
- **Power management** designed for low/battery powered systems
- Audio and Video 5x performance improvement over software, making batteries last longer

Enablement: Software and Hardware Tools

Freescale's Microcontroller Enablement Bundle

Freescale MQX + MCU

- Full-featured, scalable, proven RTOS
- Simplifies HW management, streamlines SW development
- Reduces development costs while speeding time to market

+ Tower System

+ CodeWarrior IDE

- Eclipse environment
- Processor Expert code generation wizard
- Build, debug and flash tools
- Software analysis
- Kernel-aware debug
- Host platform support

Comprehensive solution for

Open source hardware platform for prototyping application development

effective development platform for

8/16/32-bit MCUs and MPUs

Supported by a diverse range of

MCU and peripheral plug-in

boards and a growing web

maximum HW reuse.

community

Visual and automated framework

Save time, cost, and effort.

Freescale MQX RTOS Solution

Scalable, fully-featured and proven RTOS bundled with 32-bit MCUs

Full-featured and powerful

- BSPs incorporate tightly integrated RTOS, Middleware (USB, TCP/IP stacks), file system, and I/O drivers
- Designed for speed and size efficiency

Market proven

- MQX has been available on Freescale processors for > 15 years
- MQX has been used in millions of products including Medical and Heavy Industrial areas

Simple and scalable

- Can be as small as ~10KB for smallest implementation, or scale up to support sophisticated networking and threading
- Intuitive API & modular architecture enables straight-forward feature fine-tuning
- Production source code provided

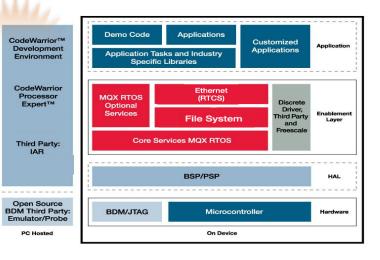

Similar to other "pay-for" software OS

MQX Software speeds time to market with support from Freescale

Software Integration headache

The Freescale Tower System

MCU/MPU Module:

A modular development platform for 8/16/32-bit MCUs & MPUs

- Quickly combine Tower Modules to build a prototype of your application
- Modules sold individually or in kits
- Open Source: Build your own Tower Module to integrate your IP
- Cost-optimized hardware
- Software support from Freescale and Third Parties
- Growing community of Third Party hardware support
- On-line community: www.towergeeks.org

Rapidly build a prototype of your end application

23

CodeWarrior Development Studio for Microcontrollers v10.1

- Integrated development tool suite for ColdFire, Kinetis and S08 architectures based on the Eclipse open development platform
 - Project Wizard creates a new project in as few as 9 clicks
 - MCU Change Wizard retargets a project to a new processor in as few as 6 clicks
 - CodeWarrior optimizing C/C ++ compilers for ColdFire and Kinetis Microcontrollers included
 - Extensions to Eclipse CDT to provide sophisticated features to troubleshoot and repair embedded applications
 - Processor Expert combines easy-to-use component-based application creation with an expert knowledge system
 - Trace and profile support for on-chip trace buffers to provide emulator-like debug capability without additional hardware
 - Kernel-aware debug for MQX, Linux and OSEK
 - CodeWarrior Special Edition is a complimentary version up to 128KB code size

Accelerate the development of the most complex embedded applications

IAR Embedded Workbench

- The most widely used tool chain for ARM MCUs
- A consistent tool chain for ColdFire+ and Kinetis devices
- Completely integrated development environment
- Highly optimized IAR C/C++ Compiler
- Powerful IAR C-SPY Debugger
- MQX integration
- Ready-made example projects

Pin Compatibility Across Families

$K10 \rightarrow K20 \& K30 \rightarrow K40 = Add USB$ with almost zero changes

 \checkmark The only difference will be 4 extra USB pins and 4 less digital I/O pins

$K10 \rightarrow K30 \& K20 \rightarrow K40 = Add Segment LCD$ with minimal board layout changes

- ✓ Digital & Analog I/O signals maintain placement order
- \checkmark Segment LCD signals are muxed with existing Digital & Analog I/O signals
- ✓ Most Digital I/O signals muxed with Segment LCD signals become available on added pins by larger package

$K20 \rightarrow K60 = Add$ Ethernet with NO changes

✓ All Ethernet signals are muxed with existing Digital & Analog I/O signals

ANALOG I/O = OSC, ADC, CMP, etc.

Embedded Memory Options

- Multiple flash arrays allowing code execution while non-volatile data or firmware are updated
- Robust update option for seamlessly switching program code execution between flash arrays
- FlexMemory option from 32 KB to 512 KB FlexNVM for additional program and data flash
 - Common uses:
 - Large data tables
 - Protected bootloader
- FlexMemory option for high-endurance, byte-writeable, embedded EEPROM from 32 bytes to 16 KB with up to 10 million read/write cycles
 - Common uses:
 - Saving frequently updated data
 - Protecting critical data during brown out conditions

Flash Security Options

Security State	Description
Unsecured	Debug Access: Full FSL Factory Access: Full
Secured Level I	Debug Access: Mass Erase Only FSL Factory Access: ERSALL, RD1ALL, RDREG, WRREG, and the RAM- only commands
Secured Level II	Debug Access: Mass Erase Only FSL Factory Access: Mass Erase Only
Secured Level III	Debug Access: No Access FSL Factory Access: No Access

Mechanisms for Changing Flash Security State

Mechanism	Description	
Backdoor Key	Providing an 8-byte key that is compared with one stored in flash allow the SW to change the security state. Usually the key is provided through an external port.	
Debug Access	Through the debug port a Flash mass erase can be performed, clearing the security state.	
FSL Factory Access	In secured Level I, NVMBIST mode can only perform a Mass Erase. Other test modes have full access to change all flags, and the entire contents of the NVM memory.

System RAM Memory Map

Tightly Coupled Memory Lower (TCML) SRAM	0x1800_0000-0x1FFF_FFF
Tightly Coupled Memory Upper (TCMU) SRAM	0x2000_0000-0x200F_FFFF

- SRAM performance for core accesses:
 - Instruction fetch from TCML has zero wait states
 - Instruction fetch from TCMU has one wait state
 - Data fetch from TCML and TCMU have zero wait states
- The on-chip SRAM is implemented with TCML:TCMU ranges forming a contiguous block of memory. TCML is anchored to 0x1FFF_FFFF and occupies the range before this base address. The TCMU is anchored to 0x2000_0000 and occupies the space after this base address.
- •SRAM retained in VLLS2 mode starts at TCMU 0x2000_0000

Debug and Trace Options

Debug Interfaces	Debug & Trace Resources

EzPort (EZP) Features

Serial interface that is compatible with a subset of the SPI format.

Able to read, erase and program flash memory

Supports section program command for most efficient programming

► Able to reset the micro-controller, allowing it to boot from the flash memory after the memory has been configured

EzPort can be made available on the JTAG header (10-pin or 20-pin)

- EzPort can program the flash faster than JTAG
- Using EzPort on JTAG header allows for fast programming option without needing an additional header
- Will be supported by CodeWarrior tool chain

EzPort force disable option bit in flash option register

- User programmable bit that can disable entry into EzPort mode
 - Prevents accidental entry into EzPort mode
 - Extra system security (prevents EzPort from being used as a security exploit)

Freescale, the Freescale logo, CodeWarrior, ColdFire and Powerquicc are trademarks of Freescale Semiconductor, Inc., Reg. U.S. Pat. & Tm. Off. Cross Bar Switch (XBS) Features

Symmetric crossbar bus switch implementation

► Allows concurrent, non-blocking accesses from different masters to different slaves

Allowing multiple masters to run bus cycles concurrently increases available
 system bus bandwidth

Up to 8 master ports and 8 slave ports, scalable through parameters and wrapper

32-bit wide and supports byte, word (2 byte), longword (4 byte), and 16 byte burst transfers

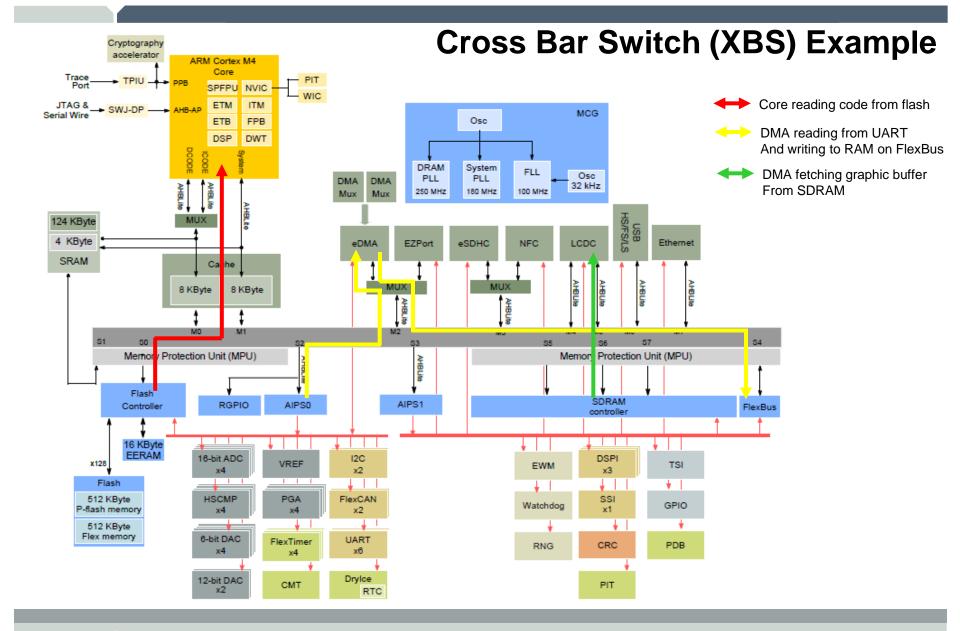

Operates at a 1-to-1 clock frequency with the bus masters

Slave arbitration attributes configured on a slave by slave basis

Low-power park mode support

trademarks of ARM Limited. © 2010 Freescale Semiconductor. Inc.

Freescale Semiconductor Confidential and Proprietary Information. Freescale™ and the Freescale logo are trademarks of Freescale Semiconductor, Inc. All other product or service names are the property of their respective owners. © Freescale Semiconductor, Inc. 2006.

DMA Features

16 or 32 channel implementation that performs complex data transfers with minimal CPU intervention

- Number of channels depends on the specific Kinetis device
- · Connections to the crossbar switch for bus mastering the data movement

Programmable source and destination addresses and transfer size

- All data movement via dual-address transfers: read from source, write to destination
- Internal data buffer used a temporary storage to support 16-byte burst transfers
- Support for enhanced addressing modes
 - Support for scatter/gather DMA processing
 - Support for complex data structures
- Supports 8-bit, 16-bit, 32-bit, and 16-byte transfer sizes

Transfer control descriptor (TCD) organized to support two-deep, nested transfer operations

- 32-byte TCD stored in local memory for each channel
- An inner data transfer loop defined by a minor byte transfer count
- An outer data transfer loop defined by a major iteration count

Channel activation via one of three methods:

- Explicit software initiation
- Initiation via a channel-to-channel linking mechanism for continuous transfers
- Peripheral-paced hardware requests (one per channel)
- Support for cancelling transfers via hardware or software

Fixed-priority and round-robin channel arbitration

Channel completion reported via optional interrupt requests

- One interrupt per channel, optionally asserted at completion of major iteration count
- Optional error terminations per channel and logically summed together to form
- One error interrupt to the interrupt controller

FSL MPU vs. ARM MPU

Feature	FSL MPU	ARM MPU	
Region Descriptors	Up to 16	Up to 8; each with 8 equal sub-regions	
Region Sizes	32 byte to 4 GB; allows overlapping protection	32 byte to 4 GB; allows overlapping protection	
Access Control Rights	 Up to 8 AHB Master Connections: Core Masters: read, write, and execute attributes for supervisor and user accesses Non-core Masters: read and write attributes 	Core Only: • Read, write, and execute attributes for supervisor and user accesses	
Protected Resources	• TCMU SRAM • TCML SRAM • SRAM via crossbar switch • Flash • FlexBus • DRAM Controller (3 ports) • IPS is protected by AIPS Controller	• TCMU SRAM •SRAM via crossbar switch • FlexBus • DRAM Controller (3 ports) • IPS	
Error Reporting Mechanism	 Generates access protection error Multiple error registers (one per slave port) capture the last faulting address, master number, attributes, etc. 	 Generates access protection error (MemManage Fault Handler) Single error registers capture the last faulting address, attributes, etc. 	

WDOG Features

Independent clock source input (independent from CPU/Bus clock). Choice between two clock sources:

- 1 KHz Internal Oscillator (external to the WDOG)
- Bus clock

Unlock sequence for allowing updates to write-once WDOG Control/Configuration bits.

► All WDOG Control/Configuration bits are writeable once only, within 256 bus clock cycles of being unlocked.

• Users need to always update these after unlocking, within 256 bus clock cycles. Failure to update resets the system.

Programmable Timeout period, specified in terms of number of WDOG clock cycles.

Ability to test WDOG timer and reset, with flag indicating watchdog test. This test can be permanently disabled.

- Quick Test Small timeout value programmed for quick test.
- Byte Test Individual bytes of timer tested one at a time.

WDOG Features

Read only Access to WDOG timer

· Allows dynamic check that WDOG timer is operational

Windowed Refresh Option

- Provides robust check that program flow is faster than expected.
- Programmable window.
- · Refresh outside window leads to reset.

Robust refresh mechanism

• Write values of 0xA602 and then 0xB480, within 20 bus clock cycles of each other, to WDOG Refresh Register.

Count of WDOG resets as they occur.

• Configurable **interrupt on timeout** to provide **"debug breadcrumbs".** This is followed by a reset after 256 bus clock cycles.

Class B: IEC 60730 compliant by providing system robustness, diagnostic and self test mechanisms to ensure safe operation of hardware and software in application

EWM Features

Independent clock source input (independent from CPU/Bus clock). Choice between two clock sources:

• 1 KHz Internal Oscillator (external to the WDOG)

Programmable Timeout period, specified in terms of number of EWM clock cycles.

Windowed Refresh Option

- Provides robust check that program flow is faster than expected.
- Programmable window.
- Refresh outside window leads to EWM_OUT_b pin assertion

Robust refresh mechanism

• Write values of 0xB4 and 0x2C to EWM Refresh Register within 15 bus clock cycles of each other, to WDOG Refresh Register.

► One output pin, EWM_OUT_b, when asserted is used to reset or place the external circuit into safe mode.

► One input pin, EWM_IN, allows an external circuit to control the EWM_OUT_b pin.

High Level Clocking System

Two oscillator options

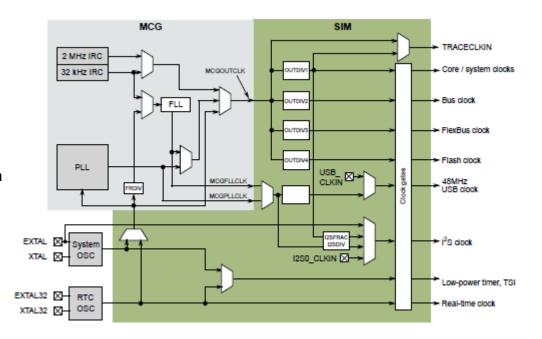

- System
 - kHz & MHz range
 - Operates from System power domain
- ≻ RTC
 - kHz range
 - Can be system oscillator
 - Operates from RTC VBAT power domain

"On-the-fly" clock dividers with individual clock gating

- Core/Platform Clock
- Peripheral Bus Clock
 - Can operate 1:1 ratio to Core/Platform Clock up to maximum 50 MHz
 - Clock to most peripherals
- FlexBus Clock
 - Maximum 50 MHz
- Flash Clock
 - Maximum 25 MHz
- ➤ USB Clock
 - Maximum 48 MHz
 - Fractional clock divider

Low power boot option

User non-volatile register bit forces all clock dividers to maximum allowable dividers on system reset or POR for reduced average boot current.

► 1:1 peripheral bus to core/platform clock ratio up to 50 MHz improves peripheral performance while reducing overall power consumption

Clock gating allows an application unused peripheral clocks to further minimize current consumption

Oscillator Features

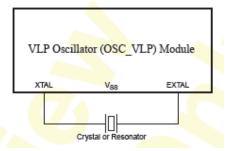

OSC Clock Sources		
	Low Range: 32 – 40 kHz	
External crystal oscillator or resonator	Medium Range: 2 - 8 MHz	
	High Range: 8 – 32 MHz	
External square wave input clock	DC to 50 MHz	

Multiple crystal oscillator frequencies supported for deriving accurate, lowjitter clocks

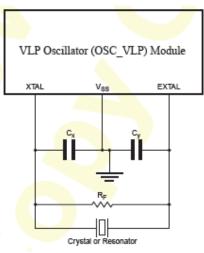

► Run IEEE 1588 Ethernet and USB simultaneously from 50 MHz clock output from external PHY eliminating need for additional system crystal

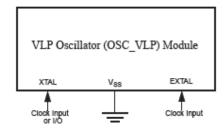

Oscillator Configurations

Configuration for crystal/resonator: • Low Frequency, Low Power

Configuration for external clock

Configuration for crystal/resonator:

- Low Frequency, High Gain
- High Frequency, Low Power
- High Frequency, High Gain

Flexible oscillator configuration eliminating external components for cost savings

Options for low power operation and extending battery life operation

MCG Flexibility

Internal Reference Clocks		FLL DCO Ranges		
32 kHz oscillator		(DMX32 = 0) 32.768 kH		Frequency @
2 MHz oscillator				(DMX32 =1)
1 kHz oscillator (LPO)		Range 0	20 – 25 MHz	24 MHz
Max CPU Frequency Tiers	PLL VCO Ranges	Range 1	40 - 50 MHz	48 MHz
50, 72, and 100 MHz	Up to 100 MHz	Range 2	60 - 75 MHz	72 MHz
120 and 150 MHz	Up to 300 MHz	Range 3	80 – 100 MHz	96 MHz

Increased FLL DCO Ranges and Internal Reference Clock options for fine tuning performance with no external clock components

► 5V tolerant pins on some devices

• Use open drain connections to interface to other 5V devices

Pin interrupt and DMA capability

- Rising/Falling edges and both edge and level
- · Each 32 pin port can generate an interrupt or DMA request

Digital glitch filter

- Spurious noise filter
- Configurable width and clock source

Hysteresis and configurable pull up/pull down device on all input pins

Configurable slew rate and drive strength on all output pins

Reduced noise on output pins

Hardware Touch-Sensing Interface (TSI)

Capacitive touch sensing detection across all low power modes

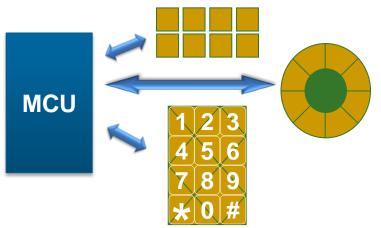

- · Automatic periodic scan with configurable duty cycle
- Low power mode current adder can be <1uA

► 16 input capacitive touch sensing pins

- Each with individual result registers
- Automatic detection of Electrode Capacitance Change with programmable upper and lower threshold
- No need for external components

► TSI interrupts

 End of Scan, Out of Range, pad short or conversion overrun

Segment LCD Controller

Segment fault detection capability

Hardware support for segment LCD display errors

Up to by 8 multiplexing

• Fewer pins required to drive LCD segments

Low power blinking mode

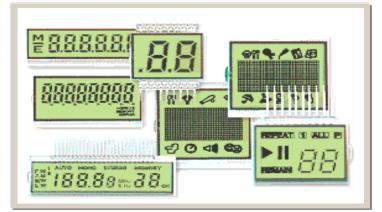

- LCD glass blink capability in low power modes
- Alternate display feature can be activated to display alternate data (i.e. blink temperature and time

Front and back plane re-assignment

Any LCD pin can be a frontplane or backplane pin or GPIO function

Internal charge pump provides voltage required to power LCD glass

- Internally regulated voltage for constant contrast across MCU VDD
- Trim register for software contrast control
- Drive for 3V or 5V LCD glass

Graphics LCD (GLCD) Controller

- Same IP as in the i.MX25x family
- Interface to passive and active color panel (TFT)
- Supports up to 8-bit QVGA displays using on-chip memory for frame buffer
- Hardware-generated cursor with blink, color, and size programmability
- Graphic window support for viewfinder function in color display
- 256 transparency levels for alpha blending between graphic window and background plane

FlexTimer (FTM) Features

- Up to 4 FTM modules on Kinetis. FTM0 & FTM3 = 8 channels; FTM1 & FTM2 = 2 channels with quadrature decode
- ▶ 16-bit counter with prescaler divide-by 1,2,4,8,16,32,64, or 128
- Each channel can be configured for input capture, output compare, edgealigned PWM mode, or center-aligned PWM mode
- Each pair of channels can be combined to generate a PWM signal with independent control of both edges of PWM signal
- Each pair can operate as complementary outputs with dead time insertion
- Dual edge capture for pulse and period width measurement
- Quadrature decoder with input filters for relative position counting
- Global Time Base mode shares single time base across multiple FTM instances

SRTC & DryICE Features

Secure Real Time Clock

- On-chip, battery powered real-time clock
- Monotonic counter
- Secure Key Storage
- Instantly erased if tamper is detected
 Independent power supply (1.71V to 3.6V)
 Programmable alarm with interrupt
 Hardware compensated clock
 Comprehensive Tamper Detection
 - Temperature
 - Clock
 - Supply Voltage
 - External tamper inputs

Tamper Sources

Internal Tamper Detect sources:

- Seconds Counter overflow
- Atomic Counter overflow
- Flash Not Secure
- Tamper Interrupt Timeout
- Analog tamper sources
 - Clock monitor
 - High voltage detect
 - High/Low temperature detect

•External Tamper Detect sources:

- 4 Passive & 2 Active
- Each external tamper detect has a glitch filter
 - Configurable width from asynchronous to ~250 ms
 - Configurable polarity per pin
 - Pull-up/down enabled so that unconnected pin asserts tamper detect
 - Glitch Filter configured independently for each tamper input

Low Power Timer (LPTMR) Features

Selectable clock for prescaler/glitch filter

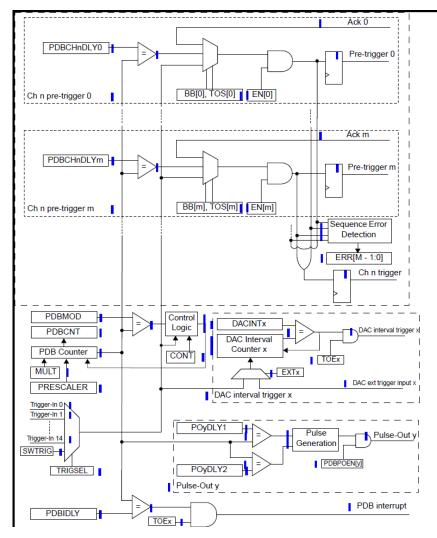

- 1 kHz internal LPO
- 32.768 kHz external crystal
- Internal Reference Clock (not usable in low leakage modes)
- Configurable Glitch Filter or Prescaler with 15-bit counter 16-bit Time or Pulse Counter with Compare
- Interrupt generated on Timer Compare
- Hardware trigger generated on Timer Compare (not usable in low leakage modes)
- Can be used in conjunction with the HSCMP to count comparator output pulses

Programmable Delay Block (PDB)

► Features

- Provides controllable delays from either internal or external triggers
- Up to 15 trigger input sources and software trigger source
- Up to 8 configurable PDB channels for ADC hardware trigger
- Up to 8 DAC interval triggers
- Supports pulse outputs use as the sample window in CMP

USB Controllers

Full/Low-speed

USB 1.1 and 2.0 compliant host, device and on-the-go (OTG) controller

- Supports Full-speed (12 Mbps) and low-speed (1.5 Mbps)
- 16 Bi-directional end points
- Paired with on-chip full/low-speed transceiver
- Built-in host mode pull down resistors

High/Full/Low-speed

Complies with USB2.0, supports host, device and OTG

- Supports High-speed (480 Mbps), Full-speed (12 Mbps) and low-speed host (1.5 Mbps)
- On-chip transceiver supports full/low-speed modes
- External transceiver via ULPI interface needed for high-speed modes
- Allows direct connection of full-speed (FS) or low-speed (LS) devices without an OHCI/UHCI companion controller

► Defined as any USB class or device for targeted peripheral list, incl. hubs

Suspend/low power mode

- Can suspend individual devices or the entire USB subsystem
- Remote wake-up integrated with processor's low power modes

USB Regulator

- 5V regulator input (VREGIN) typically provided by USB Vbus or Rechargeable Battery power
- 3.3V regulated output powers on-chip USB transceiver and device charger detect
- Output pin (VOUT33) from regulator can be used to power external board components and source up to 120mA
- Eliminates cost of external LDO
- 3.3V regulated output can power MCU main power supply

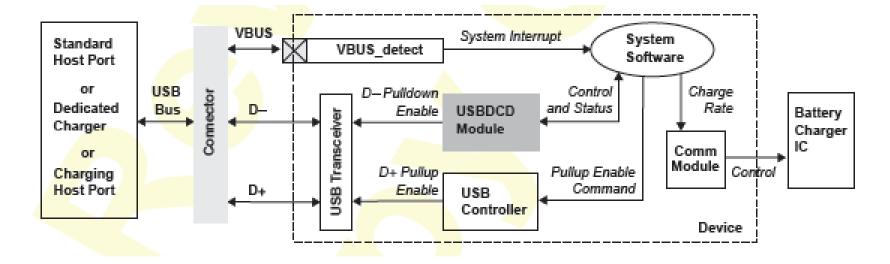

Freescale Confidential and Proprietary

USB Device Charger Detect

- Compliant with the latest industry standard specification: USB Battery Charging Specification, Revision 1.1
- Compatible with systems powered from:
 - rechargeable battery
 - non-rechargeable battery
 - external 3.3v LDO regulator powered from USB
 - directly from USB using internal regulator

Charger	Maximum Current Drawn ¹	
Standard host port	up to 500 mA	
Charging host port	up to 1500 mA	
Dedicated charging port	up to 1800 mA

IEEE 1588 Ethernet Controller

Implements the full 802.3 specification

- Dynamically configurable to support 10/100 Mbps operation
- Supports full duplex (w/flow control) and configurable half duplex operation
- Support for VLAN-tagged frames according to IEEE 802.1Q
- Supports AMD magic packet detection with interrupt for node remote power management
- Seamless interface to commercial Fast Ethernet PHYs
 - Supports MII and RMII interfaces
 - MDIO master interface for PHY device configuration and management
- Programmable MAC address: discards frames with mismatching destination address on receive (except broadcast and pause frames)
- Hardware time stamping support for IEEE 1588 provides precision clock synchronization for real-time control

Freescale Confidential and Proprietary Freescale, the Freescale logo, CodeWarrior, ColdFire and Powerquicc are trademarks of Freescale Semiconductor, Inc., Reg. U.S. Pat. & Tm. Off. SSI Features

► Full duplex serial port that allows communication with a variety of serial devices:

- Audio codecs that implement the inter-IC sound bus (I2S)
- Standard codecs
- Digital signal processors (DSPs)
- Microprocessors
- Peripherals
- AC97 support
- Independent (asynchronous) or shared (synchronous) transmit and receive sections with separate or shared internal/external clocks and frame syncs, operating in Master or Slave mode
 - Completely separate clock and frame sync selections for the receive and transmit sections. In the AC97 standard, the clock is taken from an external source and frame sync is generated internally

Supports several synchronous operating modes:

- Normal mode operation using frame sync
- Network mode operation allowing multiple devices to share the port with as many as thirty-two time slots
- Gated clock mode operation requiring no frame sync
- Programmable data interface modes such as I2S, Isb- and msb-aligned

2 sets of Transmit and Receive FIFOs

- Each of the four FIFOs is 15x32 bits
- Can be used in Network mode to provide 2 independent channels for transmission and reception
- Programmable word length (8, 10, 12, 16, 18, 20, 22 or 24 bits)
- Program options for frame sync and clock generation
- Programmable I2S modes (master, slave or normal). Oversampling clock (ccm_ssi_clk) available as output from SRCK in I2S master mode
- Option to use internal system clock as or an external input clock

UART Instantiation on Kinetis

SCI Instance	Features	Maximum Baud Rate
UART0	Higher Baud Rates (CPUCLK @ 100 MHz) ISO-7816 8 TX and 8 RX FIFOs	6.25 Mbits/sec
UART1	Higher Baud Rates (CPUCLK @ 100 MHz) 8 TX and 8 RX FIFOs	6.25 Mbits/sec
UART2-UART5	Normal Baud Rates (BUSCLK @ 50 MHz) 1 TX and 1 RX FIFO	3.13 Mbits/sec

SCI baud rate = SCI module clock / (16 * (SBR[12:0] + BRFD)

Freescale Confidential and Proprietary

Freescale, the Freescale logo, CodeWarrior, ColdFire and Powerquicc are trademarks of Freescale Semiconductor, Inc., Reg. U.S. Pat. & Tm. Off. Flexis, Processor Expert and QorlQ are trademarks of Freescale Semiconductor, Inc. All other product or service names are the property of their respective owners. - Full-duplex operation
- Standard mark/space non-return-to-zero (NRZ) format
- Selectable IrDA 1.4 return-to-zero-inverted (RZI) format with programmable pulse widths
- 13-bit baud rate selection with /32 fractional divide, based on module clock frequency
- Programmable 8-bit or 9-bit data format
- Separately enabled transmitter and receiver with programmable input/output polarity

UART (continued)

- 13-bit break character option
- 11-bit break character detection option
- Independent FIFO structure for transmit and receive

Multi-drop support: address match feature in receiver to reduce address mark wakeup ISR overhead

Ability to select MSB or LSB to be first bit on wire

Hardware flow control support for request to send (RTS) and clear to send (CTS) signals

Support for ISO-7816 protocol for interfacing with smartcards

SPI Features

Serial Peripheral Interface bus:

- Full-duplex, three-wire synchronous transfers
- Master and slave modes
- Maximum master mode frequency is CPU freq/4 (ex. 100MHz/4 = 25MHz)
- Maximum slave mode frequency is CPU freq/8 (ex. 100MHz/8 = 12.5MHz)

Buffered transmit and receive operation with 4 entry Rx and Tx FIFOs

Programmable transfer attributes on a per-frame basis:

- Parameterized number of transfer attribute registers (from two to six depending on device and particular SPI instantiation)
- Serial clock with programmable polarity and phase
- Various programmable delays
- Programmable transfer size of 4 to 16 bits
- Continuously held chip select capability (for the length of the FIFO)

▶ Up to 6 Peripheral Chip Selects, expandable with an external demultiplexer

• Exact number of chip selects depend on device and particular SPI instantiation (different SPIs on same device can have different number of chip selects)

DMA support for adding entries to TX FIFO and removing entries from RX FIFO:

Modified SPI transfer formats for communication with slower peripheral devices

Building the Industry's **Most Trusted MCU Solutions**

- Freescale offers leadership in the 32-bit MCU space
 - 1. 200 scalable devices from 32KB to 1MB of flash and up to 150MHz performance
 - 2. FlexMemory enables on-chip EEPROM
 - 3. Incredible mixed-signal integration
 - 4. Low-power capability
 - 5. Complete enablement
 - Complimentary MQX RTOS
 - Complimentary CodeWarrior IDE
 - Tower system for rapid prototyping

Kinetis by Freescale is the clear choice for your MCU needs

Processor Module:~

- Tower controller board
- Works stand-alone or in Tower system
- Features new Open Source BDM (OSBDM) for easy programming and debugging via miniB USB cable

Functional Elevator:

- Common serial and expansion bus signals
- Two 2x80 connectors on backside for easy signal access and side-mounting board (e.g. LCD module)
- Power regulation circuitry

• Standardized signal assignments (e.g. UART, SPI, Timers, External Bus, I2C, CAN, GPIO, Ethernet, USB, etc.)

Peripheral Modulé:

Standard peripheral boards compatible with all controller boards (e.g. Serial, Memory, etc.)

The Tower System

Size: The Tower is approx. 3.5" H x 3.5" W x 3.5" D when fully assembled

Board Connectors:

• Four card-edge connectors

 Uses PCI Express connectors (x16, 90mm/3.5" long, 164 pins)

Dummy Elevator:

• Future expansion for more serial interfaces and more complex MPU interfaces (e.g. RGB LCD, segment LCD, audio, enhanced Timer, etc.)

• "Dummy" shown with only GND connectivity. Used for structural integrity

Peripheral Module: TWR-SER Serial Module

Add Serial connectivity to your design

Features:

- RS232 and RS485
- Ethernet
- CAN
- USB

Resale: TWR-SER = \$29

www.freescale.com/tower

Peripheral Module: TWR-WIFI-RS2101 802.11n Wi-Fi Module

TWR-WIFI-RS2101

Features:

- RS9110-N-11-21 Wi-Fi® module from Redpine Signals
- Compliant to 802.11b/g and single stream 802.11n
- Supports all Wi-Fi client security protocols (WEP, WPA and WPA2)
- Reference design certified for FCC/IC/CE
- RoHS compliant
- Does not require any WLAN driver on the host processor
- Interfaces to MCU via SPI, UART
- Terminates SLIP connections and offers transparent serial modem functionality
- Integrated antenna, frequency reference and low-frequency clock
- Ultra-low-power operation with power save modes
- Ad-hoc and infrastructure modes for maximum deployment flexibility
- Single supply 3.1 to 3.6V operation

Resale: TWR-WIFI-RS2101= \$69

Peripheral Module: TWR-WIFI-G1011MI 802.11b Wi-Fi Module

TWR-WIFI-G1011MI

Resale: TWR-WIFI-G1011MI= \$69

Features:

•Features GS1011MIP Wi-Fi module from GainSpan

•Operates with standard 802.11 b/g/n access points at speeds up to 11 Mbps

- •Infrastructure or Adhoc mode
- •UART and SPI interfaces
- •Up to 3 Mbps in SPI Slave Mode
- •Up to 921.6 kbps on UART

•Full Wi-Fi stack including WPS and optional networking stack and services

•802.11i Security

•WEP, WPA, WPA2-PSK, Enterprise

•Certified RF Module: Wi-Fi, FCC, IC, Japan, ETSI, RoHS

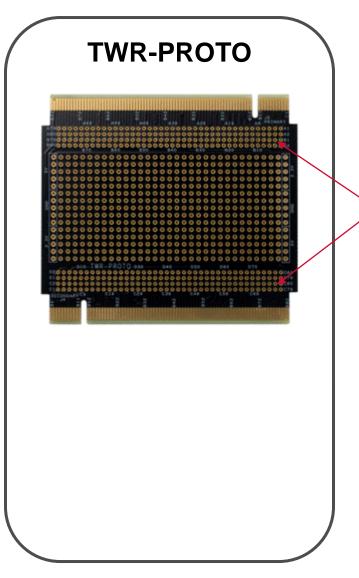

Partner:

GainSpan (http://www.gainspan.com/)

Peripheral Module: TWR-PROTO Prototyping Module

Add custom circuitry easily!

Features:

- Access to all signals
- Generous 8.3 x 3.8cm prototyping area
- 3.3V, 5V and GND

Resale: TWR-PROTO = \$14.99

Peripheral Module: TWR-MEM Memory Module

Features:

- CPLD
- Compact flash interface
- Secure digital interface
- MRAM
- Serial flash

Resale: TWR-MEM = \$89

Peripheral Module: TWR-LCD Graphical LCD Module

Features:

- 3.2" TFT QVGA display
- SPI and CPU interface
- Resistive touch screen interface
- 5-position navigation switch
- Piezzo buzzer
- microSD card slot
- •Standalone mode

Resale: TWR-LCD = \$99

Peripheral Module: TWR-SENSOR-PAK Sensor Module

TWR-SENSOR-PAK

Swappable Freescale Sensor Modules

- Touch Sense Controller (MPR121)
- Accelerometer (MMA7660, MMA6900, MMA8450)
- Pressure Sensor (MPL115A)

Swappable Touch Pad Modules

- Keypad
- Rotary

On-board Slider / Touch Pad

• With dedicated Touch Sense Controller (MPR032)

► On-board MCU (MC9S08QE96)

- Stand-alone operation
- Slave MCU mode
- Touch Sense Software

On-Board 3rd Party Sensors

- Temperature / Humidity
- Ambient Light / Proximity
- IR Receiver

OSBDM / Serial-to-USB

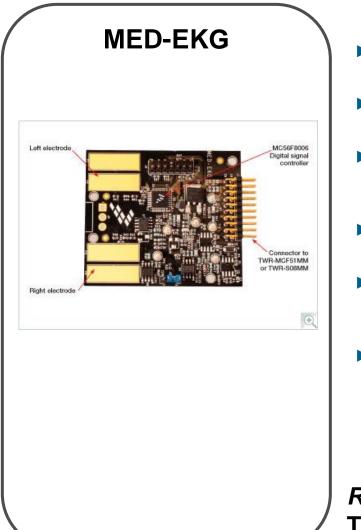

- Onboard MC9S08JM60
- OSBDM support for QE96
- Serial-to-USB support

Resale: TWR-SENSOR-PAK = \$139

Peripheral Module: MED-EKG Electrocardiograph

- Freescale Tower System compliant
- Small form factor
- External connector to TWR-S08MM128 and TWR-MCF51MM
- Includes the MC56F8006 DSC used for data filtering
- Electrodes embedded in development board for easy EKG signal detection
- Open connector for any type of EKG electrodes for additional precision

Resale: TWR-SENSOR-PAK = \$35

Xtrinsic Touch Sensing Software 2.0 Key Features

- Full API set support
- Support up to 64 electrodes
- No need of extra IC
- Configurable rotary, slider and keypad decoders with optimized buffer structure enabling any arrangement of electrodes.
- Smart auto-calibration mechanisms to prevent environmental hassles
- Noise rejection algorithms, new IIR filtering
- New KBI and IC functions for TSS ATL method
- Ability to enable and disable keys on runtime
- Auto repeat, stuck-up key, gorilla hand and other typical HMI function capabilities
- Ability to co-exist with other application code
- PC GUI application for electrode characterization
- Support multiple communication protocols: I2C, LIN, CAN, SPI, USB and more
- Possibility to have other peripherals working at the same time: LCD, LEDs, buzzer, ADC, other sensors, and more.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
