DESCRIPTION

The *ISSI* IS61LV5128AL is a very high-speed, low power, 524,288-word by 8-bit CMOS static RAM. The IS61LV5128AL is fabricated using *ISSI*'s high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields higher performance and low power consumption devices.

When $\overline{CE}$ is HIGH (deselected), the device assumes a standby mode at which the power dissipation can be reduced down to 250 µW (typical) with CMOS input levels.

The IS61LV5128AL operates from a single 3.3V power supply and all inputs are TTL-compatible.

The IS61LV5128AL is available in 36-pin 400-mil SOJ, 36-pin mini BGA, and 44-pin TSOP (Type II) packages.

3. The internal write time is defined by the overlap of $\overline{CE}$ LOW and $\overline{WE}$ LOW. All signals must be in valid states to initiate a Write, but any one can go inactive to terminate the Write. The Data Input Setup and Hold timing are referenced to the rising or falling edge of the signal that terminates the write.

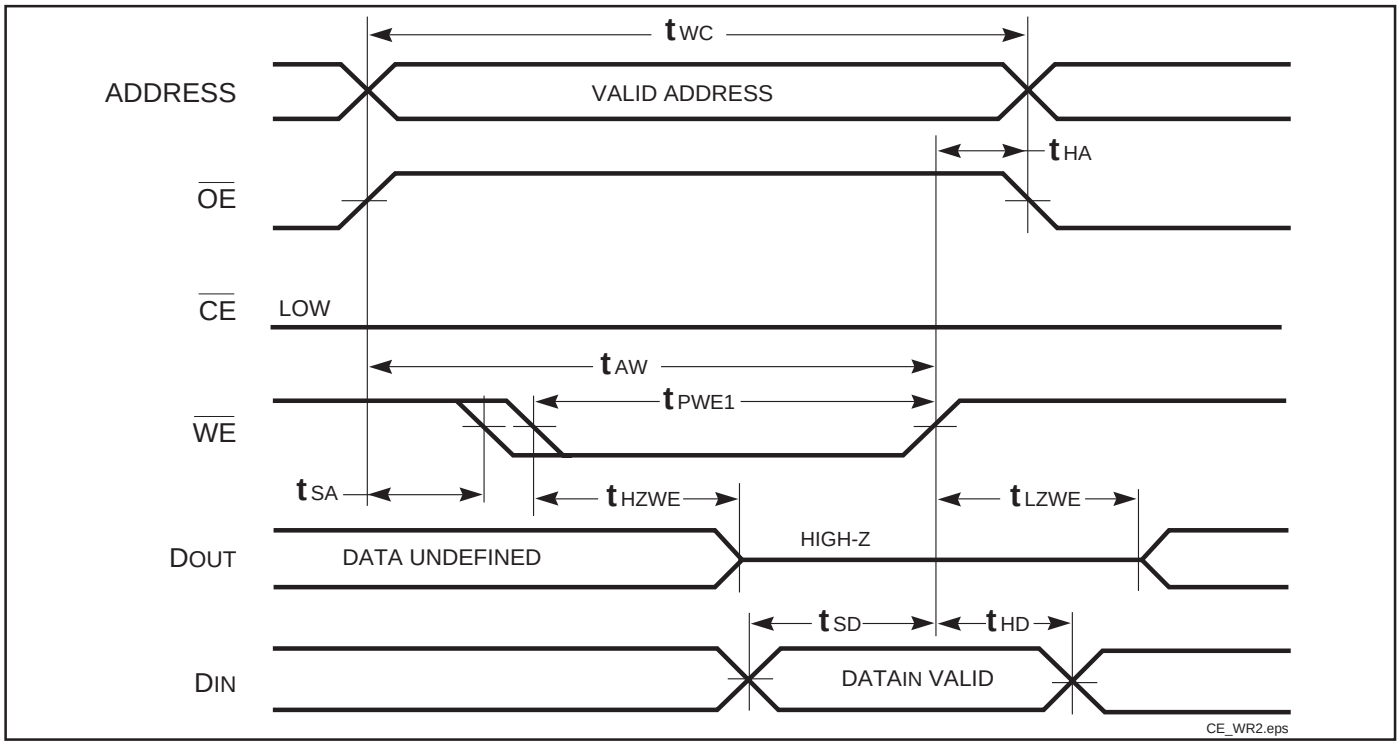
WRITE CYCLE NO. 2[1,2] ($\overline{WE}$ Controlled: $\overline{OE}$ is HIGH During Write Cycle)



Notes:

1. The internal write time is defined by the overlap of $\overline{CE}$ LOW and $\overline{WE}$ LOW. All signals must be in valid states to initiate a Write, but any one can go inactive to terminate the Write. The Data Input Setup and Hold timing are referenced to the rising or falling edge of the signal that terminates the Write.
