

## 1 Features and Benefits

- Wide operating voltage range: from 2.7V to 24V
- Accurate switching thresholds
- Reverse Supply Voltage Protection
- Output Current Limit with Auto-Shutoff
- Under-Voltage Lockout Protection
- Thermal Protection
- Traceability with integrated unique ID
- High ESD rating / Excellent EMC performance

## 2 Application Examples

- Automotive, Consumer and Industrial
- Solid-state switch
- Brake sensor
- Clutch sensor
- Sunroof/Tailgate opener
- Steering Column Lock
- Open/Close detection

## 3 Ordering Information

Product Code	Temperature Code	Package Code	Option Code	Packing from Code
MLX92231	L	SE	AAA-0xx	RE
MLX92231	L	UA	AAA-0xx	BU
MLX92231	L	SE	AAA-2xx	RE

### Legend:

Temperature Code:	L (-40°C to 150°C)
Package Code:	SE = TSOT-3L / UA = TO92-3L
Option Code:	0xx => 3 wire Hall Effect Switch 2xx => IMC version
Packing Form:	RE = Reel   BU=Bulk
Ordering Example:	MLX92231LSE-AAA-001-RE

## 4 Functional Diagram

## 5 General Description

The Melexis MLX92231 is a Hall-effect unipolar switch designed in mixed signal CMOS technology.

The device integrates a voltage regulator, Hall sensor with advanced offset cancellation system, automotive qualified EEPROM and an open-drain output driver, all in a single package.

Based on the existing robust 922xx platform, the magnetic core has been equipped with a non-volatile memory that is used to accurately trim the switching thresholds and define the needed output magnetic characteristics (TC,  $B_{OP}$ ,  $B_{RP}$ , Output pole functionality).

In addition to that an ID has been integrated on the IC to have a complete traceability throughout the process flow.

The included voltage regulator operates from 2.7 to 24V, hence covering a wide range of applications. With the built-in reverse voltage protection, a serial resistor or diode on the supply line is not required so that even remote sensors can be specified for low voltage operation down to 2.7V while being reverse voltage tolerant.

In the event of a drop below the minimum supply voltage during operation, the under-voltage lock-out protection will automatically freeze the device, preventing the electrical perturbation to affect the magnetic measurement circuitry. The output state is therefore only updated based on a proper and accurate magnetic measurement result.

The chopper-stabilized amplifier uses switched capacitor techniques to suppress the offset generally observed with Hall sensors and amplifiers. The CMOS technology makes this advanced technique possible and contributes to smaller chip size and lower current consumption than bipolar technology. The small chip size is also an important factor to minimize the effect of physical stress. This combination results in more stable magnetic characteristics and enables faster and more precise design.

The open drain output is fully protected against short-circuit with a built-in current limit. An additional automatic output shut-off is activated in case of a prolonged short-circuit condition. A self-check is then periodically performed to switch back to normal operation if the short-circuit condition is released. The on-chip thermal protection also switches off the output if the junction temperature increases above an abnormally high threshold. It will automatically recover once the temperature decreases below a safe value.

## 6 Glossary of Terms

Tesla	Units for the magnetic flux density, 1 mT = 10 Gauss
TC	Temperature Coefficient in ppm/°C
IMC	Integrated Magnetic Concentrator
POR	Power on Reset

## 7 Absolute Maximum Ratings

Exceeding the absolute maximum ratings may cause permanent damage. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

Parameter	Symbol	Value	Units
Supply Voltage <sup>(1, 2)</sup>	V <sub>DD</sub>	+27	V
Supply Voltage (Load Dump) <sup>(1, 4)</sup>	V <sub>DD</sub>	+32	V
Supply Current <sup>(1, 2, 3)</sup>	I <sub>DD</sub>	+20	mA
Supply Current <sup>(1, 3, 4)</sup>	I <sub>DD</sub>	+50	mA
Reverse Supply Voltage <sup>(1, 2)</sup>	V <sub>DDREV</sub>	-24	V
Reverse Supply Voltage <sup>(1, 4)</sup>	V <sub>DDREV</sub>	-30	V
Reverse Supply Current <sup>(1, 2, 5)</sup>	I <sub>DDREV</sub>	-20	mA
Reverse Supply Current <sup>(1, 4, 5)</sup>	I <sub>DDREV</sub>	-50	mA
Output Voltage <sup>(1, 2)</sup>	V <sub>OUT</sub>	+27	V
Output Current <sup>(1, 2, 5)</sup>	I <sub>OUT</sub>	+20	mA
Output Current <sup>(1, 4, 6)</sup>	I <sub>OUT</sub>	+75	mA
Reverse Output Voltage <sup>(1)</sup>	V <sub>OUTREV</sub>	-0.5	V
Reverse Output Current <sup>(1, 2)</sup>	I <sub>OUTREV</sub>	-100	mA
Maximum Junction Temperature <sup>(7)</sup>	T <sub>J</sub>	+165	°C
Storage Temperature Range	T <sub>S</sub>	-55 to +165	°C
ESD Sensitivity – HBM <sup>(8)</sup>	-	4000	V
ESD Sensitivity – CDM <sup>(9)</sup>	-	1000	V
Magnetic Flux Density	B	Unlimited	mT

*Absolute maximum ratings*

<sup>1</sup> The maximum junction temperature should not be exceeded

<sup>2</sup> For maximum 1 hour

<sup>3</sup> Including current through protection device

<sup>4</sup> For maximum 500ms

<sup>5</sup> Through protection device

<sup>6</sup> For V<sub>OUT</sub> ≤ 27V

<sup>7</sup> For 1000 hours

<sup>9</sup> Charged Device Model according AEC-Q100-011 standard

## 8 General Electrical Specifications

DC Operating Parameters  $V_{DD} = 2.7V$  to  $24V$ ,  $T_A = -40^{\circ}C$  to  $150^{\circ}C$  (unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ <sup>(1)</sup>	Max	Units
Supply Voltage	$V_{DD}$	Operating	2.7	-	24	V
Supply Current	$I_{DD}$		1.5	3.0	4.5	mA
Reverse supply current	$I_{DDREV}$	$V_{DD} = -16V$	-1	-	-	mA
Output Saturation Voltage	$V_{DSON}$	$V_{DD} = 3.5$ to $24V$ , $I_{OUT} = 20mA$	-	0.3	0.5	V
Output Leakage	$I_{OFF}$	$V_{OUT} = 12V$ , $V_{DD} = 12V$	-	-	10	$\mu A$
Output Rise Time <sup>(2,6)</sup> ( $R_{PU}$ dependent)	$t_R$	$R_{PU} = 1k\Omega$ , $V_{DD} = 12V$ , $V_{PU} = 5V$ $C_{LOAD} = 50pF$ to GND	0.1	0.3	1	$\mu s$
Output Fall Time <sup>(2,6)</sup> (On-chip controlled)	$t_F$	$R_{PU} = 1k\Omega$ , $V_{DD} = 12V$ , $V_{PU} = 5V$ $C_{LOAD} = 50pF$ to GND	0.1	0.3	1	$\mu s$
Power-On Time <sup>(3,4,7)</sup>	$t_{ON}$	$V_{DD} = 5V$ , $dV_{DD}/dt > 2V/us$	-	40	70	$\mu s$
Power-On Output State	-	$t < t_{ON}$	High ( $V_{PU}$ )			-
Output Current Limit	$I_{CL}$	$V_{DD} = 3.5$ to $24V$ , $V_{OUT} = 12V$	25	40	70	mA
Output ON Time under Current Limit conditions <sup>(8)</sup>	$t_{CLON}$	$V_{PU} = 12V$ , $R_{PU} = 100\Omega$	150	240		$\mu s$
Output OFF Time under Current Limit conditions <sup>(8)</sup>	$t_{CLOFF}$	$V_{PU} = 12V$ , $R_{PU} = 100\Omega$	-	3.5	-	ms
Chopping Frequency	$f_{CHOP}$		-	340	-	kHz
Refresh Period	$t_{PER}$		-	6	-	$\mu s$
Output Jitter (p-p) <sup>(2)</sup>	$t_{JITTER}$	Over 1000 successive switching events @10kHz triangle wave magnetic field, $B > \pm(B_{OPMAX} + 20mT)$	-	$\pm 3.2$	-	$\mu s$
Maximum Switching Frequency <sup>(2,5)</sup>	$f_{SW}$	$B > \pm 3(B_{OPMAX} + 1mT)$ , triangle wave magnetic field	30	65	-	kHz
Under-voltage Lockout Threshold	$V_{UVL}$		-	-	2.7	V
Under-voltage Lockout Reaction time <sup>(2)</sup>	$t_{UVL}$		-	1	-	$\mu s$
Thermal Protection Threshold	$T_{PROT}$	Junction temperature	-	190 <sup>(9)</sup>	-	$^{\circ}C$
Thermal Protection Release	$T_{REL}$	Junction temperature	-	180 <sup>(9)</sup>	-	$^{\circ}C$
SE Package Thermal Resistance	$R_{THJA}$	Single layer PCB, JEDEC standard test boards		300		$^{\circ}C/W$
UA package Thermal Resistance	$R_{THJA}$	Single layer PCB, JEDEC standard test boards		200		$^{\circ}C/W$

### General Electrical parameters

1 Typical values are defined at  $T_A = +25^{\circ}C$  and  $V_{DD} = 12V$

2 Guaranteed by design and verified by characterization, not production tested

3 The Power-On Time represents the time from reaching  $V_{DD} = 2.7V$  to the first refresh of the output

4 Power-On Slew Rate is not critical for the proper device start-up.

5 Maximum switching frequency corresponds to the maximum frequency of the applied magnetic field which is detected without loss of pulses

6  $R_{PU}$  and  $V_{PU}$  are respectively the external pull-up resistor and pull-up power supply

7 Activated output with 1 mT overdrive

8 If the Output is in Current Limitation longer than  $t_{CLON}$  the Output is switched off in high-impedance state. The Output returns back in active state at next reaching of  $B_{OP}$  or after  $t_{CLOFF}$  time interval

9  $T_{PROT}$  and  $T_{REL}$  are the corresponding junction temperature values

## 9 Magnetic Specifications

### 9.1 MLX92231LSE-AAA-004

## 11 Application Information

### 11.1 Typical Three-Wire Application Circuit

**Notes:**

1. For proper operation, a 10nF to 100nF bypass capacitor should be placed as close as possible to the V<sub>DD</sub> and ground pin.
2. The pull-up resistor R<sub>PU</sub> value should be chosen in to limit the current through the output pin below the maximum allowed continuous current for the device.
3. A capacitor connected to the output is not needed, because the output slope is generated internally.

### 11.2 Automotive and Harsh, Noisy Environments Three-Wire Circuit

**Notes:**

1. For proper operation, a 10nF to 100nF bypass capacitor should be placed as close as possible to the V<sub>DD</sub> and ground pin.
2. The device could tolerate negative voltage down to -24V, so if negative transients over supply line V<sub>PEAK</sub> < -30V are expected, usage of the diode D1 is recommended. Otherwise only R1 is sufficient.

When selecting the resistor R1, three points are important:

- the resistor has to limit I<sub>DD</sub>/I<sub>DDREV</sub> to 50mA maximum
- the resistor has to withstand the power dissipated in both over voltage conditions ( $V_{R1}^2/R1$ )
- the resulting device supply voltage V<sub>DD</sub> has to be higher than V<sub>DD</sub> min ( $V_{DD} = V_{CC} - R1 \cdot I_{DD}$ )

3. The device could tolerate positive supply voltage up to +27V (until the maximum power dissipation is not exceeded), so if positive transients over supply line with V<sub>PEAK</sub> > 32V are expected, usage a zener diode Z1 is recommended. The R1-Z1 network should be sized to limit the voltage over the device below the maximum allowed.

## 12 Standard information regarding manufacturability of Melexis products with different soldering processes

Our products are classified and qualified regarding soldering technology, solderability and moisture sensitivity level according to following test methods:

### Reflow Soldering SMD's (Surface Mount Device)s

- IPC/JEDEC J-STD-020  
Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices (classification reflow profiles according to table 5-2)
- EIA/JEDEC JESD22-A113  
Preconditioning of Nonhermetic Surface Mount Devices Prior to Reliability Testing (reflow profiles according to table 2)

### Wave Soldering SMD's (Surface Mount Device)s and THD's (Through Hole Device)s

- EN60749-20  
Resistance of plastic- encapsulated SMD's to combined effect of moisture and soldering heat
- EIA/JEDEC JESD22-B106 and EN60749-15  
Resistance to soldering temperature for through-hole mounted devices

### Iron Soldering THD's (Through Hole Device)s

- EN60749-15  
Resistance to soldering temperature for through-hole mounted devices

### Solderability SMD's (Surface Mount Device)s and THD's (Through Hole Device)s

- EIA/JEDEC JESD22-B102 and EN60749-21  
Solderability

For all soldering technologies deviating from above mentioned standard conditions (regarding peak temperature, temperature gradient, temperature profile etc) additional classification and qualification tests have to be agreed upon with Melexis.

The application of Wave Soldering for SMD's is allowed only after consulting Melexis regarding assurance of adhesive strength between device and board.

Melexis is contributing to global environmental conservation by promoting **lead free** solutions. For more information on qualifications of **RoHS** compliant products (RoHS = European directive on the Restriction Of the use of certain Hazardous Substances) please visit the quality page on our website: <http://www.melexis.com/quality.aspx>

## 13 ESD Precautions

Electronic semiconductor products are sensitive to Electro Static Discharge (ESD).

Always observe Electro Static Discharge control procedures whenever handling semiconductor products.

## 14 Package Information

### 14.1 SE (TSOT-3L) Package Information

**Marking:**

Top mark: 31ww ==> ww; assembly week

IMC version: 33ww ==> ww; assembly week

Bottom mark: YLLL ==> Y; last digit of year LLL= last 3 digits of lot number

**Hall plate location**

**Notes:**

1. All dimensions are in millimeters
2. XY Hall plate position tolerances do not include the mold flashes and protrusions described in the package drawing

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
