

$\pm 15\text{kV}$ ESD-Protected, Quad, Low-Power RS-232 Line Driver

MAX1488E

General Description

The MAX1488E quad, low-power line driver is designed for EIA/TIA-232, EIA/TIA-562, and CCITT V.28 communications in harsh environments. Each transmitter output is protected against $\pm 15\text{kV}$ electrostatic discharge (ESD) shocks. The inputs are TTL and CMOS compatible with minimal loading. The outputs feature internally controlled slew-rate limiting and current limiting. This device has a guaranteed 120kbps data rate. Power-supply current is less than $180\mu\text{A}$ over a $\pm 4.5\text{V}$ to $\pm 13.2\text{V}$ supply voltage range.

The MAX1488E is pin compatible with the MC1488, MC14C88, SN75188, SN75C188, DS1488, and DS14C88. It is available in 14-pin plastic DIP and SO packages.

Features

- ◆ **ESD Protection:**
 - $\pm 15\text{kV}$ —Human Body Model
 - $\pm 6\text{kV}$ —IEC801-2, Contact Discharge
 - $\pm 15\text{kV}$ —IEC801-2, Air-Gap Discharge
- ◆ **Latchup Free, Even During an ESD Event**
- ◆ **Low $85\mu\text{A}$ Supply Current from I_{EE} or I_{CC}**
- ◆ **Guaranteed 120kbps Data Rate**
- ◆ **No External Capacitors Required for Slew-Rate Limiting**
- ◆ **Pin Compatible with MC1488, MC14C88, SN75188, SN75C188, DS1488, and DS14C88**

Applications

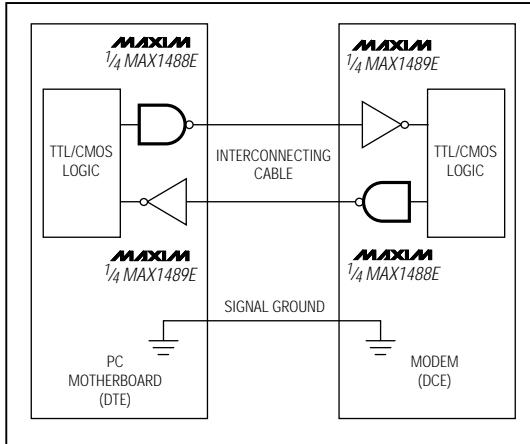

PC Motherboards
Modems
Interface Data Terminal Equipment (DTE) with
Data Circuit-Terminating Equipment (DCE)
Equipment Meeting IEC1000-4-2
(formerly IEC801-2) or $\pm 15\text{kV}$ ESD Protection

Ordering Information

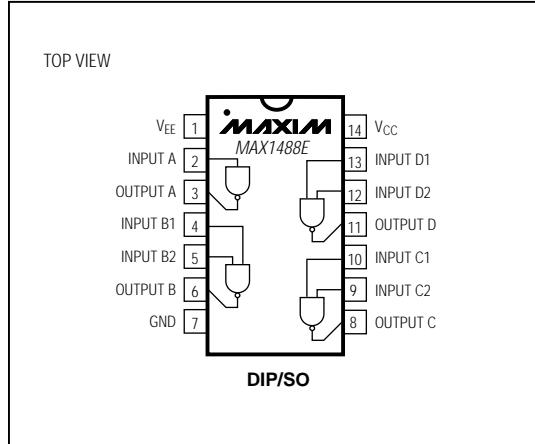

PART	TEMP. RANGE	PIN-PACKAGE
MAX1488ECPD	0°C to $+70^\circ\text{C}$	14 Plastic DIP

MAX1488E

±15kV ESD-Protected, Quad, Low-Power RS-232 Line Driver

ABSOLUTE MAXIMUM RATINGS

Positive Supply Voltage (V_{CC})	+14V	Operating Temperature Ranges
Negative Supply Voltage (V_{EE})	-14V	MAX1488EC_D0°C to +70°C
Input Voltage (V_{IN})	-0.3V to +15V	MAX1488EE_D-40°C to +85°C
Driver Output Voltage	±15V	Storage Temperature Range-65°C to +160°C
Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)		Lead Temperature (soldering, 10sec)+300°C
Plastic DIP (derate 10.00mW/°C above +70°C)	800mW	
SO (derate 8.7mW/°C above +70°C)	695mW	

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

($V_{CC} = 4.5\text{V}$ to 13.2V , $V_{EE} = -4.5\text{V}$ to -13.2V , $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. Typical values are at $T_A = +25^\circ\text{C}$.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS

Output Slew Rate	SR	C_L = 15pF to 2500pF, R_L = 3k Ω to 7k Ω , V_{CC} = 12V, V_{EE} = -12V, T_A = +25°C, $V_{OUTPUT_}$ from -3.0V to 3.0V	4	30		V/ μ s
Guaranteed Data Rate		C_L = 15pF to 2500pF, R_L = 3k Ω to 7k Ω , V_{CC} = 12V, V_{EE} = -12V, T_A = +25°C	120			kbps

Note 1: The los value is for one output at a time. If more than one output is shorted simultaneously, damage may occur.

Typical Operating Characteristics

(V_{CC} = 12V, V_{EE} = -12V, T_A = +25°C, unless otherwise noted.)

$\pm 15\text{kV}$ ESD-Protected, Quad, Low-Power RS-232 Line Driver

Pin Description

PIN	NAME	FUNCTION
1	V _{EE}	-4.5V to -13.2V Supply Voltage Input
2, 4, 5, 9, 10, 12, 13	INPUT __	Driver Inputs
3, 6, 8, 11	OUTPUT __	Driver Outputs
7	GND	Ground
14	V _{CC}	+4.5V to +13.2V Supply Voltage Input

Detailed Description

The MAX1488E provides $\pm 15\text{kV}$ of ESD protection when operating or when powered down. After an ESD event, the MAX1488E will not latch up. Internal slew-rate-limiting circuitry eliminates the need for external capacitors. The MAX1488E has a guaranteed 120kbps data rate.

Outputs

Tables 1 and 2 describe the output states. The output voltage level is affected by both the load current and supply voltage, and is stable over temperature. Refer to the *Typical Operating Characteristics* to see how the output voltage varies with supply voltage, load capacitance, and temperature.

Table 1. Driver A Functions

INPUT A	OUTPUT A
H	L
L	H

Table 2. Driver B-D Functions

INPUT_1	INPUT_2	OUTPUT __
H	H	L
L	X	H
X	L	H

Inputs

The driver inputs determine the driver output states (Tables 1 and 2). Driver inputs B, C, and D have two inputs. **Connect unused inputs to ground or V_{CC}.**

$\pm 15\text{kV}$ ESD Protection

As with all Maxim devices, ESD-protection structures are incorporated on all pins to protect against electrostatic discharges encountered during handling and assembly. The MAX1488E driver outputs have extra protection against static electricity found in normal

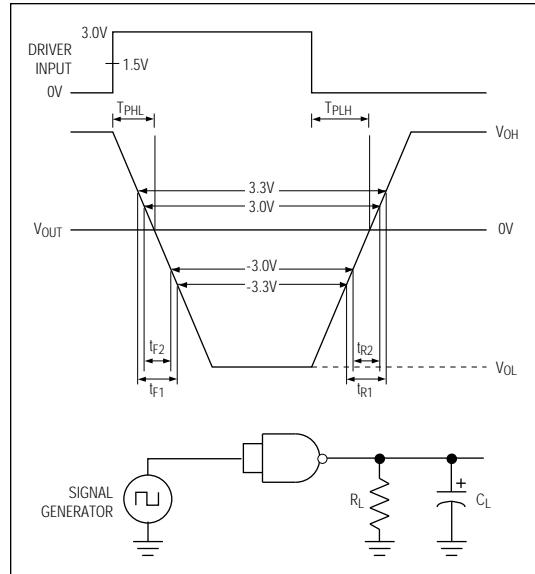

Figure 1. Slew-Rate Test Circuit and Timing Diagram

operation. Maxim's engineers developed state-of-the-art structures to protect these pins against ESD of $\pm 15\text{kV}$, without damage. After an ESD event, the MAX1488E keeps working without latchup.

ESD protection can be tested in various ways; the transmitter outputs are characterized for protection to the following:

- 1) $\pm 15\text{kV}$ using the Human Body Model
- 2) $\pm 6\text{kV}$ using the Contact-Discharge Method specified in IEC1000-4-2 (formerly IEC801-2)
- 3) $\pm 15\text{kV}$ using the Air-Gap Method specified in IEC1000-4-2 (formerly IEC801-2).

ESD Test Conditions

ESD performance depends on a number of conditions. Contact Maxim for a reliability report that documents test setup, methodology, and results.

Human Body Model

Figure 2a shows the Human Body Model, and Figure 2b shows the current waveform it generates when discharged into a low impedance. This model consists of a 100pF capacitor charged to the ESD voltage of interest, which is then discharged into the test device through a $1.5\text{k}\Omega$ resistor.

$\pm 15kV$ ESD-Protected, Quad, Low-Power RS-232 Line Driver

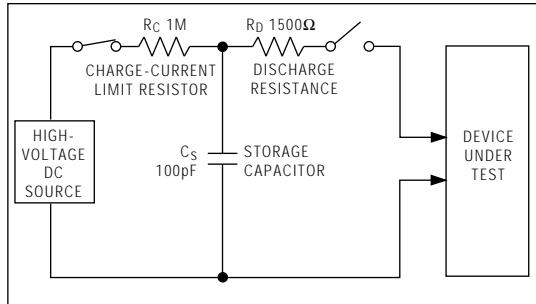

Figure 2a. Human Body ESD Test Model

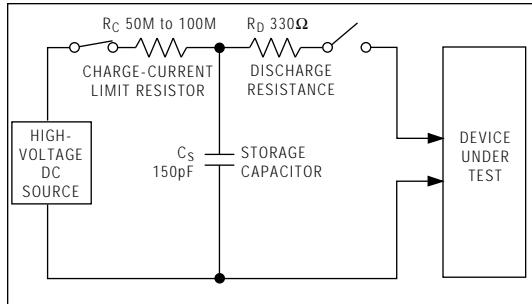

Figure 3a. IEC1000-4-2 ESD Test Model

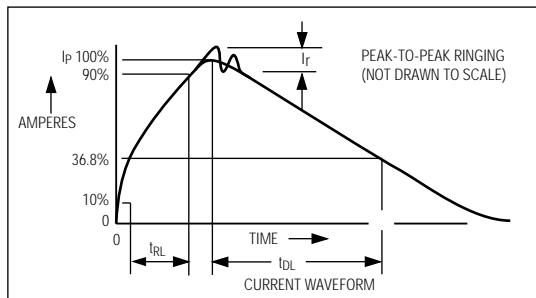

Figure 2b. Human Body Model Current Waveform

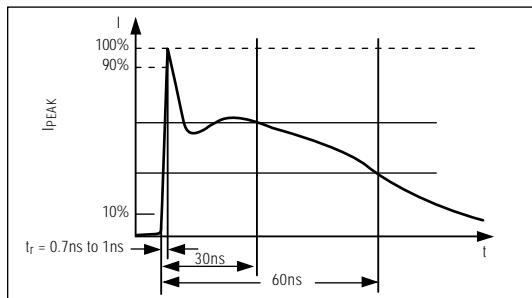

Figure 3b. IEC1000-4-2 ESD Generator Current Waveform

IEC1000-4-2

The IEC1000-4-2 standard covers ESD testing and performance of finished equipment; it does not specifically refer to integrated circuits. The MAX1488E helps you design equipment that meets Level 4 (the highest level) of IEC1000-4-2, without additional ESD-protection components.

The major difference between tests done using the Human Body Model and IEC1000-4-2 is higher peak current in IEC1000-4-2. Because series resistance is lower in the IEC1000-4-2 ESD test model (Figure 3a), the ESD withstand voltage measured to this standard is generally lower than that measured using the Human Body Model. Figure 3b shows the current waveform for the $\pm 6kV$ IEC1000-4-2 Level 4 ESD Contact-Discharge test.

The Air-Gap test involves approaching the device with a charged probe. The Contact-Discharge method connects the probe to the device before the probe is energized.

Machine Model

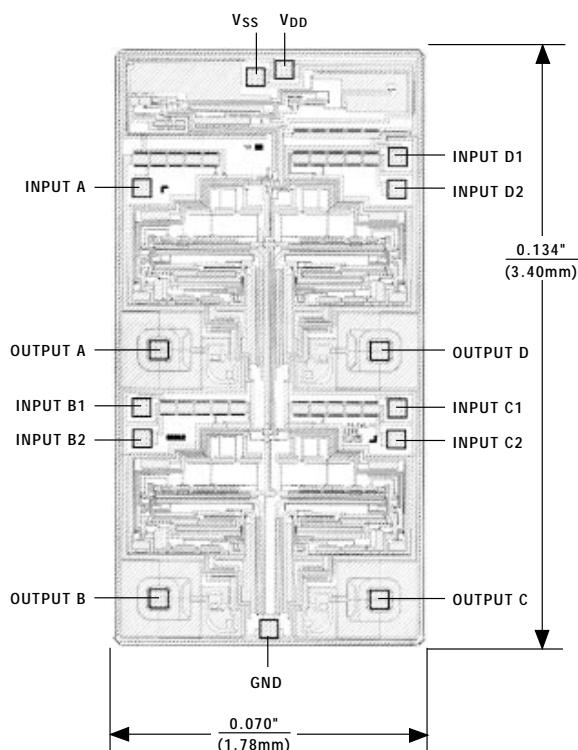

The Machine Model for ESD testing uses a 200pF storage capacitor and zero-discharge resistance. Its objective is to mimic the stress caused by contact that occurs with handling and assembly during manufacturing. Of course, all pins (not just RS-232 inputs and outputs) require this protection during manufacturing. Therefore, the Machine Model is less relevant to the I/O ports than the Human Body Model and IEC1000-4-2.

Applications Information

Use proper layout to ensure other devices on your board are not damaged in an ESD strike. Currents as high as 60A can instantaneously pass into the ground, so it is important to minimize the ground-lead return path to the power supply. A separate return path to the power supply is recommended. Trace widths should be greater than 40 mils. Vcc and VEE must be bypassed with $0.1\mu F$ capacitors as close to the part as possible to ensure maximum ESD protection.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
