# Si5330

## 1.8/2.5/3.3 V LOW-JITTER, LOW-SKEW CLOCK BUFFER/LEVEL TRANSLATOR

### Features

- Supports single-ended or differential input clock signals
- Generates four differential (LVPECL, LVDS, HCSL) or eight single-ended (CMOS, SSTL, HSTL) outputs
- Provides signal level translation
  - Differential to single-ended
  - Single-ended to differential
  - Differential to differential
  - Single-ended to single-ended
- Wide frequency range
  - LVPECL, LVDS: 5 to 710 MHz
  - HCSL: 5 to 250 MHz
  - SSTL, HSTL: 5 to 350 MHz
  - CMOS: 5 to 200 MHz
- Additive jitter: 150 fs RMS typ
- Output-output skew: 100 ps
- Propagation delay: 2.5 ns typ
- Single core supply with excellent PSRR: 1.8, 2.5, or 3.3 V
- Output driver supply voltage independent of core supply: 1.5, 1.8, 2.5, or 3.3 V
- Loss of Signal (LOS) indicator allows system clock monitoring
- Output Enable (OEB) pin allows glitchless control of output clocks
- Low power: 10 mA typical core current
- Industrial temperature range: -40 to +85 °C
- Small size: 24-lead, 4 x 4 mm QFN

### Applications

- High Speed Clock Distribution
- Ethernet Switch/Router
- SONET / SDH
- PCI Express 2.0/3.0
- Fibre Channel
- MSAN/DSLAM/PON
- Telecom Line Cards

ESD Tolerance		HBM (100 pF, 1.5 kΩ)	2.5	kV
ESD Tolerance		CDM	550	V
ESD Tolerance		MM	175	V
Latch-up Tolerance			JESD78 Compliant	
Junction Temperature	$T_J$		150	°C
Soldering Temperature (Pb-free profile) <sup>4</sup>	$T_{PEAK}$		260	°C
Soldering Temperature Time at $T_{PEAK}$ (Pb-free profile) <sup>4</sup>	$T_P$		20–40	sec

**Notes:**

1. Permanent device damage may occur if the Absolute Maximum Ratings are exceeded. Functional operation should be restricted to the conditions as specified in the operational sections of this data sheet. Exposure to maximum rating conditions for extended periods may affect device reliability.
2. 24-QFN package is RoHS compliant.
3. For more packaging information, go to [www.silabs.com/support/quality/pages/RoHSInformation.aspx](http://www.silabs.com/support/quality/pages/RoHSInformation.aspx).
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

## 2. Functional Description

The Si5330 is a low-jitter, low-skew fanout buffer optimized for high-performance PCB clock distribution applications. The device produces four differential or eight single-ended, low-jitter output clocks from a single input clock. The input can accept either a single-ended or a differential clock allowing the device to function as a clock level translator.

### 2.1. $V_{DD}$ and $V_{DDO}$ Supplies

The core  $V_{DD}$  and output  $V_{DDO}$  supplies have separate and independent supply pins allowing the core supply to operate at a different voltage than the I/O voltage levels.

The  $V_{DD}$  supply powers the core functions of the device, which operates from 1.8, 2.5, or 3.3 V. Using a lower supply voltage helps minimize the device's power consumption. The  $V_{DDO}$  supply pins are used to set the output signal levels and must be set at a voltage level compatible with the output signal format.

### 2.2. Loss Of Signal Indicator (LOS)

The input is monitored for a valid clock signal using an LOS circuit that monitors input clock edges and declares an LOS condition when signal edges are not detected over a 1 to 5  $\mu$ s observation period. The LOS pin is asserted "low" when activity on the input clock pin is present. A "high" level on the LOS pin indicates a loss of signal (LOS). The LOS pin must be pulled to  $V_{DD}$  as shown in Figure 2.

Figure 2. LOS Indicator with External Pull-Up

### 2.3. Output Enable (OEB)

The output enable (OEB) pin allows disabling or enabling of the outputs clocks (CLK0-CLK3). The output enable is logically controlled to ensure that no glitches or runt pulses are generated at the output as shown in Figure 3.

Figure 3. OEB Glitchless Operation

All outputs are enabled when the OEB pin is connected to ground or below the  $V_{IL}$  voltage for this pin. Connecting the OEB pin to  $V_{DD}$  or above the  $V_{IH}$  level will disable the outputs. Both  $V_{IL}$  and  $V_{IH}$  are specified in Table 5. All outputs are forced to a logic "low" when disabled. The OEB pin is 3.3 V tolerant.

### 2.4. Input Signals

The Si5330 can accept single-ended and differential input clocks. See "AN408: Termination Options for Any-Frequency, Any-Output Clock Generators and Clock Buffers—Si5338, Si5334, Si5330" for details on connecting a wide variety of signals to the Si5330 inputs.

### 2.5. Output Driver Formats

The Si5330 supports single-ended output formats of CMOS, SSTL, and HSTL and differential formats of LVDS, LVPECL, and HCSL. It is normally required that the LVDS driver be dc-coupled to the 100  $\Omega$  termination at the receiver end. If your application requires an ac-coupled 100  $\Omega$  load, contact the applications team for advice. See AN408 for additional information on the terminations for these driver types.

### 2.6. Input and Output Terminations

See AN408 for detailed information.

## 3. Ordering the Si5330

The Si5330 can be ordered to meet the requirements of the most commonly-used input and output signal types, such as CMOS, SSTL, HSTL, LVPECL, LVDS, and HSCL. See Figure 1, "Si5330 Functional Block Diagrams," on page 2 and Table 11, "Order Numbers and Device Functionality," on page 14 for specific ordering information.

## 4. Pin Descriptions

**Note:** Center pad must be tied to GND for normal operation.

**Table 10. Si5330 Pin Descriptions**

Pin #	Pin Name	I/O	Signal Type	Description
1	IN1	I	Multi	<b>Si5330A/B/C/G/H/J Differential Input Devices.</b>
2	IN2	I	Multi	These pins are used as the differential clock input. IN1 is the positive input; IN2 is the negative input. Refer to “AN408: Termination Options for Any-Frequency, Any-Output Clock Generators and Clock Buffers—Si5338, Si5334, Si5330” for interfacing and termination details.
	IN3	I	Multi	<b>Si5330F/K/L/M Single-Ended Input Devices.</b> These pins are not used. Leave IN1 unconnected and IN2 connected to ground.
3	IN3	I	Multi	<b>Si5330F/K/L/M Single-Ended Devices.</b> This is the single-ended clock input. Refer to AN408 for interfacing and termination details.
4	RSVD_GND			<b>Ground.</b> Must be connected to system ground.
5	RSVD_GND			<b>Ground.</b> Must be connected to system ground.
6	RSVD_GND			<b>Ground.</b> Must be connected to system ground.

Table 10. Si5330 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Type	Description
7	VDD	VDD	Supply	<b>Core Supply Voltage.</b> The device operates from a 1.8, 2.5, or 3.3 V supply. A 0.1 $\mu$ F bypass capacitor should be located very close to this pin.
8	LOS	O	Open Drain	<b>Loss of Signal Indicator.</b> 0 = CLKIN present. 1 = Loss of signal (LOS). This pin requires an external $\geq 1$ k $\Omega$ pull-up resistor.
9	CLK3B	O	Multi	<b>Si5330A/B/C/K/L/M Differential Output Devices.</b> This is the negative side of the differential CLK3 output. Refer to AN408 for interfacing and termination details. Leave unconnected when not in use. <b>Si5330F/G/H/J Single-Ended Output Devices.</b> This is one of the single-ended CLK3 outputs. Both CLK3A and CLK3B single-ended outputs are in phase. Refer to AN408 for interfacing and termination details. Leave unconnected when not is use.
10	CLK3A	O	Multi	<b>Si5330A/B/C/K/L/M Differential Devices.</b> This is the positive side of the differential CLK3 output. Refer to AN408 for interfacing and termination details. Leave unconnected when not in use. <b>Si5330F/G/H/J Single-Ended Devices.</b> This is one of the single-ended CLK3 outputs. Both CLK3A and CLK3B single-ended outputs are in phase. Refer to AN408 for interfacing and termination details. Leave unconnected when not is use.
11	VDDO3	VDD	Supply	<b>Output Clock Supply Voltage.</b> Supply voltage for CLK3A/B. Use a 0.1 $\mu$ F bypass cap as close as possible to this pin. If CLK3 is not used, this pin must be tied to V <sub>DD</sub> (pin 7 and/or pin 24).
12	RSVD_GND			<b>Ground.</b> Must be connected to system ground.
13	CLK2B	O	Multi	<b>Si5330A/B/C/K/L/M Differential Output Devices.</b> This is the negative side of the differential CLK2 output. Refer to AN408 for interfacing and termination details. Leave unconnected when not in use. <b>Si5330F/G/H/J Single-Ended Output Devices.</b> This is one of the single-ended CLK2 outputs. Both CLK2A and CLK2B single-ended outputs are in phase. Refer to AN408 for interfacing and termination details. Leave unconnected when not is use.

Table 10. Si5330 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Type	Description
14	CLK2A	O	Multi	<p><b>Si5330A/B/C/K/L/M Differential Devices.</b> This is the positive side of the differential CLK2 output. Refer to AN408 for interfacing and termination details. Refer to AN408 for interfacing and termination details. Leave unconnected when not is use.</p>
15	VDDO2	VDD	Supply	<p><b>Output Clock Supply Voltage.</b> Supply voltage for CLK2A/B. Use a 0.1 <math>\mu</math>F bypass cap as close as possible to this pin. If CLK2 is not used, this pin must be tied to <math>V_{DD}</math> (pin 7 and/or pin 24).</p>
16	VDDO1	VDD	Supply	<p><b>Output Clock Supply Voltage.</b> Supply voltage for CLK1A,B. Use a 0.1 <math>\mu</math>F bypass cap as close as possible to this pin. If CLK1 is not used, this pin must be tied to <math>V_{DD}</math> (pin 7 and/or pin 24).</p>
17	CLK1B	O	Multi	<p><b>Si5330A/B/C/K/L/M Differential Output Devices.</b> This is the negative side of the differential CLK1 output. Refer to AN408 for interfacing and termination details. Leave unconnected when not in use.</p> <p><b>Si5330F/G/H/J Single-Ended Output Devices.</b> This is one of the single-ended CLK1 outputs. Both CLK1A and CLK1B single-ended outputs are in phase. Refer to AN408 for interfacing and termination details. Leave unconnected when not is use.</p>
18	CLK1A	O	Multi	<p><b>Si5330A/B/C/K/L/M Differential Devices.</b> This is the positive side of the differential CLK1 output. Refer to AN408 for interfacing and termination details. Leave unconnected when not in use.</p> <p><b>Si5330F/G/H/J Single-Ended Devices.</b> This is one of the single-ended CLK1 outputs. Both CLK1A and CLK1B single-ended outputs are in phase. Refer to AN408 for interfacing and termination details. Leave unconnected when not is use.</p>
19	OEB	I	CMOS	<p><b>Output Enable.</b> All outputs are enabled when the OEB pin is connected to ground or below the <math>V_{IL}</math> voltage for this pin. Connecting the OEB pin to <math>V_{DD}</math> or above the <math>V_{IH}</math> level will disable the outputs. Both <math>V_{IL}</math> and <math>V_{IH}</math> are specified in Table 5. All outputs are forced to a logic "low" when disabled. This pin is 3.3 V tolerant.</p>
20	VDDO0	VDD	Supply	<p><b>Output Clock Supply Voltage.</b> Supply voltage for CLK0A,B. Use a 0.1 <math>\mu</math>F bypass cap as close as possible to this pin. If CLK2 is not used, this pin must be tied to <math>V_{DD}</math> (pin 7 and/or pin 24).</p>

Table 10. Si5330 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Type	Description
21	CLK0B	O	Multi	<p><b>Si5330A/B/C/K/L/M Differential Output Devices.</b> This is the negative side of the differential CLK0 output. Refer to AN408 for interfacing and termination details. Leave unconnected when not in use.</p> <p><b>Si5330F/G/H/J Single-ended Output Devices.</b> This is one of the single-ended CLK0 outputs. Both CLK0A and CLK0B single-ended outputs are in phase. Refer to AN408 for interfacing and termination details. Leave unconnected when not is use.</p>
22	CLK0A	O	Multi	<p><b>Si5330A/B/C/K/L/M Differential Devices.</b> This is the positive side of the differential CLK0 output. Refer to AN408 for interfacing and termination details. Leave unconnected when not in use.</p> <p><b>Si5330F/G/H/J Single-ended Devices.</b> This is one of the single-ended CLK0 outputs. Both CLK0A and CLK0B single-ended outputs are in phase. Refer to AN408 for interfacing and termination details. Leave unconnected when not is use.</p>
23	RSVD_GND			<p><b>Ground.</b> Must be connected to system ground.</p>
24	VDD	VDD	Supply	<p><b>Core Supply Voltage.</b> The device operates from a 1.8, 2.5, or 3.3 V supply. A 0.1 <math>\mu</math>F bypass capacitor should be located very close to this pin.</p>
GND PAD	GND	GND	Supply	<p><b>Ground Pad.</b> This is main ground connection for this device. It is located at the bottom center of the package. Use as many vias as possible to connect this pad to the main ground plane. The device will not function as specified unless this ground pad is properly connected to ground.</p>

## 5. Orderable Part Numbers and Device Functionality

Table 11. Order Numbers and Device Functionality

Part Number <sup>1,2</sup>	Input Signal Format	Output Signal Format	Number of Outputs	Frequency Range
<b>LVPECL Buffers</b>				
Si5330A-B00200-GM	Differential	3.3 V LVPECL	4	5 to 710 MHz
Si5330A-B00202-GM	Differential	2.5 V LVPECL	4	5 to 710 MHz
<b>LVDS Buffers</b>				
Si5330B-B00204-GM	Differential	3.3 V LVDS	4	5 to 710 MHz

## 6. Package Outline: 24-Lead QFN

**Figure 4. 24-Lead Quad Flat No-Lead (QFN)**

**Table 12. Package Dimensions**

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05
b	0.18	0.25	0.30
D	4.00 BSC.		
D2	2.35	2.50	2.65
e	0.50 BSC.		
E	4.00 BSC.		
E2	2.35	2.50	2.65
L	0.30	0.40	0.50
aaa	0.10		
bbb	0.10		
ccc	0.08		
ddd	0.10		
eee	0.05		

**Notes:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to the JEDEC Outline MO-220, variation VGGD-8.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.
5. Terminal base alloy: Cu.
6. Terminal plating/grid array material: Au/NiPd.
7. For more packaging information, go to [www.silabs.com/support/quality/pages/RoHSInformation.aspx](http://www.silabs.com/support/quality/pages/RoHSInformation.aspx).

## 7. Recommended PCB Layout

**Table 13. PCB Land Pattern**

Dimension	Min	Nom	Max
P1	2.50	2.55	2.60
P2	2.50	2.55	2.60
X1	0.20	0.25	0.30
Y1	0.75	0.80	0.85
C1		3.90	
C2		3.90	
E		0.50	

### Notes:

#### General

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on the IPC-7351 guidelines.
4. Connect the center ground pad to a ground plane with no less than five vias to a ground plane that is no more than 20 mils below it. Via drill size should be no smaller than 10 mils. A longer distance to the ground plane is allowed if more vias are used to keep the inductance from increasing.

#### Solder Mask Design

5. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu\text{m}$  minimum, all the way around the pad.

#### Stencil Design

6. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
7. The stencil thickness should be 0.125 mm (5 mils).
8. The ratio of stencil aperture to land pad size should be 1:1 for all perimeter pins.
9. A 2x2 array of 1.0 mm square openings on 1.25 mm pitch should be used for the center ground pad.

#### Card Assembly

10. A No-Clean, Type-3 solder paste is recommended.
11. The recommended card reflow profile is per the JEDEC/IPC J-STD-020C specification for Small Body Components.

# Si5330

---

## 8. Top Marking

### 8.1. Si5330 Top Marking

### 8.2. Top Marking Explanation

<b>Mark Method:</b>	Laser	
<b>Line 1 Marking:</b>	Device Part Number	Si5330
<b>Line 2 Marking:</b>	X = Frequency and configuration code. xxxxx = Input and output format configuration code. See "5. Orderable Part Numbers and Device Functionality" on page 14 for more information.	Xxxxxx
<b>Line 3 Marking:</b>	R = Product revision. TTTTT = Manufacturing trace code.	RTTTTT
<b>Line 4 Marking:</b>	Pin 1 indicator.	Circle with 0.5 mm diameter; left-justified
	YY = Year. WW = Work week. Characters correspond to the year and work week of package assembly.	YYWW

## DOCUMENT CHANGE LIST

### Revision 0.1 to Revision 0.2

- Clarified documentation to reflect that Pin 19 is OEB (OE Enable Low).
- Updated Table 4, “Jitter Specifications” on page 7.

### Revision 0.2 to Revision 0.3

- Major editorial updates to improve clarity.
- Updated “Additive Jitter” Specification Table.
- Updated “Core Supply Current” Specification in Table 2.
- Removed the Low-Power LVPECL output options from the ordering table in section 5.
- Removed D/E ordering options.

### Revision 0.3 to Revision 0.35

- Typo of 150 ps on front page changed to 150 fs.
- Updated PCB layout notes.
- Added no ac coupling for LVDS outputs.
- Changed input rise/fall time spec to 2 ns.

### Revision 0.35 to Revision 1.0

- Added maximum junction temperature specification to Table 9 on page 8.
- Added minimum and maximum duty cycle specifications to Table 4 on page 5.
- Updated Table 3, “Performance Characteristics,” on page 5.
  - Added maximum propagation delay spec (4 ns).
  - Added test condition to  $t_{LOS\_B}$  in Table 3 on page 5.
  - Removed reference to frequency in Output-Output Skew.
- Updated Table 4, “Input and Output Clock Characteristics,” on page 5.
  - Input voltage (max) changed “3.63” to “VDD”
  - Input voltage swing (max) change “3.63” with “—”.
- Added Table 6, “Output Control Pins (LOS),” on page 7.
- Added tape and reel ordering information to “5. Orderable Part Numbers and Device Functionality” on page 14.
- Added “8. Top Marking” on page 18.

### Revision 1.0 to Revision 1.1

- Updated ordering information to refer to revision B silicon.
- Updated top marking explanation in section 8.2.

### Revision 1.1 to Revision 1.2

- Removed MSL rating.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
