

MAX20335 Evaluation Kit

Evaluates: MAX20335

General Description

The MAX20335 evaluation kit (EV kit) is a fully assembled and tested circuit for evaluating the MAX20335 wearable charge-management solution with I²C capability for low-power wearable application. The device includes a linear battery charger, smart power selector, two ultra-low quiescent current buck regulators, and three low-dropout (LDO) linear regulators.

Refer to the MAX20335 IC data sheet for detailed information regarding the operation and features of the devices.

Features

- RoHS Compliant
- Proven PCB Layout
- Full Assembled and Tested
- I²C Serial Interface

Quick Start

Required Equipment

- Adjustable power supply with 0V to 5V capability
- Digital multimeter (DMM)
- I²C controller device
- GPIO controller device
- Cables with grabber connections

Optional Equipment

- Second power supply for LDOs

Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify basic board operation:

Caution: Do not turn on the power supply and external devices until all connections are completed.

- 1) Connect PFN1 (J2 pin 11) to the GPIO controller output. Alternatively, PFN1 can be connected to a 3V IO supply through a 10k pullup resistor. This procedure assumes that a GPIO controller is used.

- 2) Connect the I²C Controller device to GND, SDA (J1 pin 6) and SCL (J1 pin 7).
- 3) Set the power supply voltage to 3.7V and turn off the supply.
- 4) Connect the positive terminal of the 3.7V power supply to BAT (J1 pin 4) and the negative terminal to GND (J3 pin 1).
- 5) Turn on the 3.7V power supply.
- 6) Turn on the GPIO controller device and I²C controller device.
- 7) Set GPIO controller to output logic-high to PFN1 to power on the MAX20335.
- 8) Measure the voltage on SYS (J1 pin 3) and confirm that it equals the battery voltage.
- 9) To enable Buck1 output, use the I²C controller to set Buck1En[1:0] to "01" by writing value "0xE9" to register 0x0D. Measure B1OUT (J2 pin 6) and confirm that it equals 1.2V.
- 10) To enable Buck2 output, Use the I²C controller to set Buck2En[1:0] to "01" by writing value "0xE9" to register 0x0F. Measure B2OUT (J2 pin 5) and confirm that it equals 1.8V.
- 11) **Optional:** To test any one of the LDOs, set the second power supply voltage to the desired LDO input voltage. Turn it off and then connect the positive terminal to the LDO input and the negative terminal to GND. Turn it on. To enable the LDO output, use the I²C controller to write value "0xE2" to the register LDO1Cfg, LDO2Cfg, or LDO3Cfg corresponding to the LDO under test. Measure the voltage of the LDO output and confirm that it matches the default setting: 0.8V (LDO1), 0.9V (LDO2), and 0.9V (LDO3).
- 12) The EV Kit is ready for additional evaluation.

Detailed Description of Hardware

The MAX20335 evaluation kit (EV Kit) evaluates the MAX20335 wearable charge-management solution.

See [Table 1](#) thru [Table 3](#) for pin descriptions of the three connectors (J1–J3).

[Ordering Information](#) appears at end of data sheet.

Table 1. Connector J1

PIN	MAX20335	DESCRIPTION
1	GND	Ground
2	MON	Voltage Monitor Output
3	N.C.	Not Connected
4	INT	Open-drain Active-low Interrupt Output
5	RST	Power-On Reset Output.
6	SDA	I ² C Serial Data Input / Output
7	SCL	I ² C Serial Clock Input
8	MPC1	Multipurpose Configuration Input 1
9	MPC0	Multipurpose Configuration Input 0
10	PFN2	Power Function Control Input / Output
11	PFN1	Power Function Control Input
12	GND	Ground

Table 2. Connector J2

PIN	SIGNAL	DESCRIPTION
1	L3IN	LDO3 Input
2	L3OUT	LDO3 Output
3	L2OUT	LDO2 Output
4	L1OUT	LDO1 Output
5	B2OUT	Buck Regulator 2 Output
6	B1OUT	Buck Regulator 1 Output
7	L2IN	LDO2 Input
8	L1IN	LDO1 Input

Table 3. Connector J3

PIN	SIGNAL	DESCRIPTION
1	GND	Ground
2	CHRGIN	Charger Input
3	SYS	System Load Connection
4	BAT	Battery
5	THM	Battery Temperature Thermistor Connection
6	CAP	Bypass for Internal LDO
7	SET	External Resistor Connection for Configuring Battery Charge Current
8	LED	LED Current Sink Input
9	N.C.	Not Connected
10	N.C.	Not Connected
11	N.C.	Not Connected
12	GND	Ground

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
