ISD1700 SERIES

1 GENERAL DESCRIPTION

The Winbond® ISD1700 ChipCorder® Series is a high quality, fully integrated, single-chip multi-message voice record and playback device ideally suited to a variety of electronic systems. The message duration is user selectable in ranges from 26 seconds to 120 seconds, depending on the specific device. The sampling frequency of each device can also be adjusted from 4 kHz to 12 kHz with an external resistor, giving the user greater flexibility in duration versus recording quality for each application. Operating voltage spans a range from 2.4 V to 5.5 V to ensure that the ISD1700 devices are optimized for a wide range of battery or line-powered applications.

The ISD1700 is designed for operation in either standalone or microcontroller (SPI) mode. The device incorporates a proprietary message management system that allows the chip to self-manage address locations for multiple messages. This unique feature provides sophisticated messaging flexibility in a simple push-button environment. The devices include an on-chip oscillator (with external resistor control), microphone preamplifier with Automatic Gain Control (AGC), an auxiliary analog input, anti-aliasing filter, Multi-Level Storage (MLS) array, smoothing filter, volume control, Pulse Width Modulation (PWM) Class D speaker driver, and current/voltage output.

The ISD1700 devices also support an optional "vAlert" (voiceAlert) feature that can be used as a new message indicator. With vAlert, the device flashes an external LED to indicate that a new message is present. Besides, four special sound effects are reserved for audio confirmation of operations, such as "Start Record", "Stop Record", "Erase", "Forward", "Global Erase", and etc.

Recordings are stored into on-chip Flash memory, providing zero-power message storage. This unique single-chip solution is made possible through Winbond's patented Multi-Level Storage (MLS) technology. Audio data are stored directly in solid-state memory without digital compression, providing superior quality voice and music reproduction.

Voice signals can be fed into the chip through two independent paths: a differential microphone input and a single-ended analog input. For outputs, the ISD1700 provides a Pulse Width Modulation (PWM) Class D speaker driver and a separate analog output simultaneously. The PWM can directly drive a standard 8Ω speaker or typical buzzer, while the separate analog output can be configured as a single-ended current or voltage output to drive an external amplifier.

While in Standalone mode, the ISD1700 devices automatically enter into power down mode for power conservation after an operation is completed.

In the SPI mode, the user has full control via the serial interface in operating the device. This includes random access to any location inside the memory array by specifying the start address and end address of operations. SPI mode also allows access to the Analog Path Configuration (APC) register. This register allows flexible configuration of audio paths, inputs, outputs and mixing. The APC default configuration for standalone mode can also be modified by storing the APC data into a non-volatile register (NVCFG) that is loaded at initialization. Utilizing the capabilities of ISD1700 Series, designers have the control and flexibility to implement voice functionality into the high-end products.

Notice: The specifications are subject to change without notice. Please contact Winbond Sales Offices or Representatives to verify current or future specifications. Also refer to the website for any related application notes.

ISD1700 SERIES

2 FEATURES

- Integrated message management systems for single-chip, push-button applications
 - REC** : level-trigger for recording
 - PLAY** : edge-trigger for individual message or level-trigger for looping playback sequentially
 - ERASE** : edge-triggered erase for first or last message or level-triggered erase for all messages
 - FWD** : edge-trigger to advance to the next message or fast message scan during the playback
 - VOL** : 8 levels output volume control
 - RDY/**INT** : ready or busy status indication
 - RESET** : return to the default state
 - Automatic power-down after each operation cycle
- Selectable sampling frequency controlled by an external oscillator resistor

Sampling Frequency	12 kHz	8 kHz	6.4 kHz	5.3 kHz	4 kHz
Rosc	53 k Ω	80 k Ω	100 k Ω	120 k Ω	160 k Ω

- Selectable message

duration

- A wide range selection from 20 secs to 480 secs pending upon sampling frequency chosen

Sample Freq.	ISD1730	ISD1740	ISD1750	ISD1760	ISD1790	ISD17120	ISD17150	ISD17180	ISD17210	ISD17240
12 kHz	20 secs	26 secs	33 secs	40 secs	60 secs	80 secs	100 secs	120 secs	140 secs	160 secs
8 kHz	30 secs	40 secs	50 secs	60 secs	90 secs	120 secs	150 secs	180 secs	210 secs	240 secs
6.4 kHz	37 secs	50 secs	62 secs	75 secs	112 secs	150 secs	187 secs	225 secs	262 secs	300 secs
5.3 kHz	45 secs	60 secs	75 secs	90 secs	135 secs	181 secs	226 secs	271 secs	317 secs	362 secs
4 kHz	60 secs	80 secs	100 secs	120 secs	180 secs	240 secs	300 secs	360 secs	420 secs	480 secs

- Message and operation indicators
 - Four customizable Sound Effects (SEs) for audible indication
 - Optional vAlert (voiceAlert) to indicate the presence of new messages
 - LED: stay on during recording, blink during playback, forward and erase operations
- Dual operating modes
 - Standalone mode*:
 - Integrated message management techniques
 - Automatic power-down after each operation cycle
 - SPI mode*:
 - Fully user selectable and controllable options via APC register and various SPI commands
- Two individual input channels
 - MIC+/MIC-: differential microphone inputs with AGC (Automatic Gain Control)
 - AnaIn: single-ended auxiliary analog input for recording or feed-through
- Dual output channels
 - Differential PWM Class D speaker outputs directly drives an 8 Ω speaker or a typical buzzer
 - Configurable AUD (current) or AUX (voltage) single-ended output drives external audio amplifier
- ChipCorder standard features
 - High-quality, natural voice and audio reproduction
 - 2.4V to 5.5V operating voltage
 - 100-year message retention (typical)
 - 100,000 record cycles (typical)

ISD1700 SERIES

- Temperature options:
 - Commercial: 0°C to +50°C (die); 0°C to +70°C (packaged units)
 - Industrial: -40°C to +85°C (packaged units)
- Packaging types: available in die, PDIP, SOIC and TSOP
- Package option: Lead-free packaged units

ISD1700 SERIES

4 PINOUT CONFIGURATION

Refer to Design Guide for details before performing any design or PCB layout.

ISD1700 SERIES

5 PIN DESCRIPTION

Refer to Design Guide for details before performing any design or PCB layout.

PIN NAME	FUNCTIONS
V_{CCD}	Digital Power Supply: Power supply for digital circuitry.
\overline{LED}	LED: An LED output.
\overline{RESET}	RESET: When active, the device enters into a known state.
MISO	Master In Slave Out: Data is shifted out on the falling edge of SCLK. When the SPI is inactive (\overline{SS} = high), it's tri-state.
MOSI	Master Out Slave In: Data input of the SPI interface when ISD1700 is a slave. Data is latched into the device on the rising edge of SCLK.
SCLK	Serial Clock: Clock of the SPI interface.
\overline{SS}	Slave Select: Selects as a slave device and enables the SPI interface.
V_{SSA}	Analog Ground: Ground path for analog circuitry.
Analn	Analn: Auxiliary analog input to the device for recording or feed-through.
MIC+	MIC+: Non-inverting input of the differential microphone signal.
MIC-	MIC-: Inverting input of the differential microphone signal.
V_{SSP2}	Ground: Ground path for negative PWM speaker drive.
SP-	SP-: The negative Class D PWM speaker output.
V_{CCP}	Power Supply for PWM Speaker Driver: Power for PWM speaker drive.
SP+	SP+: The positive Class D PWM speaker output.
V_{SSP1}	Ground: Ground path for positive PWM speaker drive.
AUD/AUX	Auxiliary Output: Either an AUD (current) or AUX (voltage) output.
AGC	Automatic Gain Control (AGC): The AGC adjusts the gain of the microphone preamplifier circuitry.
\overline{VOL}	Volume: This control has 8 levels of volume adjustment.
R_{OSC}	Oscillator Resistor: A resistor determines the sample frequency of the device, which sets the duration.
V_{CCA}	Analog Power Supply: Power supply for analog circuitry.
\overline{FT}	Feed-through: Enable the feed-through path for Analn signal to the outputs.
\overline{PLAY}	Playback: Plays the recorded message individually, or plays messages sequential in a looping mode.
\overline{REC}	Record: When active, starts recording message.
\overline{ERASE}	Erase: When active, can erase individual message or do global erase.
\overline{FWD}	Forward: Advances to the next message from the current location.
RDY/\overline{INT}	An open drain output. Can review ready or interrupt status.
V_{SSD}	Digital Ground: Ground path for digital circuitry

ISD1700 SERIES

6 MODES OF OPERATIONS

The ISD1700 Series can operate in either Standalone (Push-Button) or microcontroller (SPI) mode.

6.1 STANDALONE (PUSH-BUTTON) MODE

One can utilize the $\overline{\text{REC}}$, $\overline{\text{PLAY}}$, $\overline{\text{FT}}$, $\overline{\text{FWD}}$, $\overline{\text{ERASE}}$, $\overline{\text{VOL}}$ or $\overline{\text{RESET}}$ control to initiate a desired operation. As completed, the device automatically enters into the power-down state.

6.2 SPI MODE

In SPI mode, control of the device is achieved through the 4-wire serial interface via SPI commands.

For technical details, please refer to the design guide.

7 TIMING DIAGRAMS

The following estimated timing diagrams are not in proper scale.

7.1 BASIC OPERATION

ISD1700 SERIES

7.2 SPI OPERATION

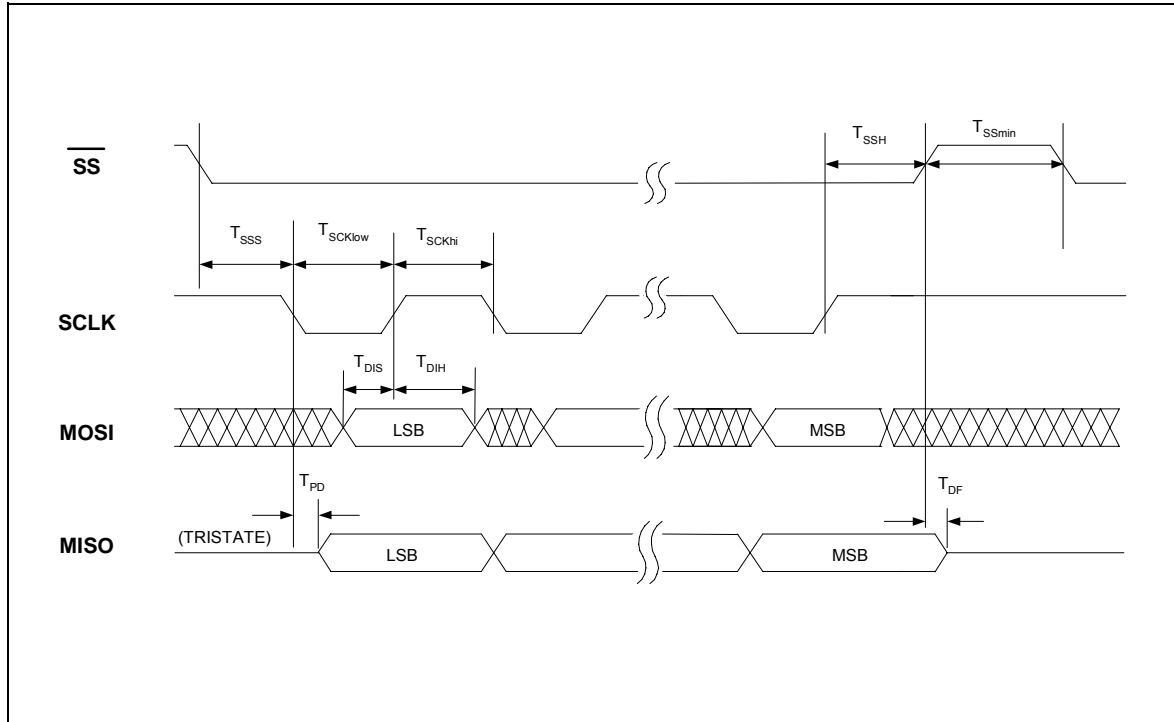

Figure 12.8: SPI Operation

PARAMETER	SYMBOL	MIN	TYP	MAX	UNITS
SS Setup Time	T_{SSS}	500			nsec
SS Hold Time	T_{SSH}	500			nsec
Data in Setup Time	T_{DIS}	200			nsec
Data in Hold Time	T_{DIH}	200			nsec
Output Delay	T_{PD}			500	nsec
Output Delay to HighZ	T_{DF}			500	nsec
SS HIGH	T_{SSmin}	1			μ sec
SCLK High Time	T_{SCKhi}	400			nsec
SCLK Low Time	T_{SCKlow}	400			nsec
CLK Frequency	F_0			1,000	KHz
Power-Up Delay ^[1]	T_{PUD}		50		msec

Notes: ^[1] The value shown is based upon 8 kHz sampling frequency. Delay increases proportionally for slower sampling frequency.

8 ABSOLUTE MAXIMUM RATINGS

ABSOLUTE MAXIMUM RATINGS (DIE) ^[1]

CONDITIONS	VALUES
Junction temperature	150°C
Storage temperature range	-65°C to +150°C
Voltage Applied to any pads	(V _{SS} - 0.3V) to (V _{CC} + 0.3V)
Power supply voltage to ground potential	-0.3V to +7.0V

ABSOLUTE MAXIMUM RATINGS (PACKAGED PARTS) ^[1]

CONDITIONS	VALUES
Junction temperature	150°C
Storage temperature range	-65°C to +150°C
Voltage Applied to any pins	(V _{SS} - 0.3V) to (V _{CC} + 0.3V)
Voltage applied to any pin (Input current limited to +/-20 mA)	(V _{SS} - 1.0V) to (V _{CC} + 1.0V)
Power supply voltage to ground potential	-0.3V to +7.0V

^[1] Stresses above those listed may cause permanent damage to the device. Exposure to the absolute maximum ratings may affect device reliability. Functional operation is not implied at these conditions.

8.1 OPERATING CONDITIONS

OPERATING CONDITIONS (DIE)

CONDITIONS	VALUES
Operating temperature range	0°C to +50°C
Supply voltage (V _{CC}) ^[1]	+2.4 V to +5.5 V
Ground voltage (V _{SS}) ^[2]	0 V
Input voltage (V _{CC}) ^[1]	0 V to 5.5 V
Voltage applied to any pins	(V _{SS} -0.3 V) to (V _{CC} +0.3 V)

OPERATING CONDITIONS (PACKAGED PARTS)

CONDITIONS	VALUES
Operating temperature range (Case temperature)	-40°C to +85°C
Supply voltage (V _{DD}) ^[1]	+2.4V to +5.5V
Ground voltage (V _{SS}) ^[2]	0V
Input voltage (V _{DD}) ^[1]	0V to 5.5V
Voltage applied to any pins	(V _{SS} -0.3V) to (V _{DD} +0.3V)

^[1] V_{CC} = V_{CCA} = V_{CCD} = V_{CCP}

^[2] V_{SS} = V_{SSA} = V_{SSD} = V_{SSP1} V_{SSP2}

ISD1700 SERIES

9 ELECTRICAL CHARACTERISTICS

9.1 DC PARAMETERS

PARAMETER	SYMBOL	MIN	TYP ^[1]	MAX	UNITS	CONDITIONS
Supply Voltage	V _{DD}	2.4		5.5	V	
Input Low Voltage	V _{IL}	V _{SS} -0.3		0.3xV _{DD}	V	
Input High Voltage	V _{IH}	0.7xV _{DD}		V _{DD}	V	
Output Low Voltage	V _{OL}	V _{SS} -0.3		0.3xV _{DD}	V	I _{OL} = 4.0 mA ^[2]
Output High Voltage	V _{OH}	0.7xV _{DD}		V _{DD}	V	I _{OH} = -1.6 mA ^[2]
Record Current	I _{DD_Record}		20		mA	V _{DD} = 5.5 V, No load, Sampling freq = 12 kHz
Playback Current	I _{DD_Playback}		20		mA	
Erase Current	I _{DD_Erase}		20		mA	
Standby Current	I _{SB}		1	10	μA	^[3] ^[4]
Input Leakage Current	I _{ILPD1}			±1	μA	Force V _{DD}
Input Current Low	I _{ILPD2}	-3		-10	μA	Force V _{SS} , others at V _{CC}
Preamplifier Input Impedance	R _{MIC+} , R _{MIC-}		7		kΩ	Power-up AGC
AnalIn Input Impedance	R _{AnalIn}		42		kΩ	When active
MIC Differential Input	V _{IN1}	15		300	mV	Peak-to-Peak ^[5]
AnalIn Input Voltage	V _{IN2}			1	V	Peak-to-Peak
Gain from MIC to SP+/-	A _{MSP}	6		40	dB	V _{IN} = 15~300 mV, AGC = 4.7 μF, V _{CC} = 2.4V~5.5V
Speaker Output Load	R _{SPK}	8			Ω	Across both Speaker pins
AUX Output Load	R _{Aux}	5			kΩ	When active
Speaker Output Power	P _{out}		670		mW	V _{DD} = 5.5 V
			313		mW	V _{DD} = 4.4 V
			117		mW	V _{DD} = 3 V
			49		mW	V _{DD} = 2.4 V
Speaker Output Voltage	V _{OUT1}		V _{DD}		V	R _{SPK} = 8Ω (Speaker), Typical buzzer
AUX Output Swing	V _{OUT2}			1	V	Peak-to-Peak
AUX Output DC Level	V _{OUT3}		1.2		V	When active
AUD	I _{AUD}		-3.0		mA	V _{DD} = 4.5 V, R _{EXT} = 390 Ω
Volume Output	A _{Vol}		0 to -28		dB	8 steps of 4dB each reference to output
Total Harmonic Distortion	THD		1		%	15 mV p-p 1 kHz sine wave, Cmessage weighted

Notes: ^[1] Conditions: V_{CC} = 4.5V, 8 kHz sampling frequency and T_A = 25°C, unless otherwise stated.

^[2] LED output during Record operation.

^[3] V_{CCA}, V_{CCD} and V_{CCP} are connected together. V_{SSA}, V_{SSP1}, V_{SSP2} and V_{SSD} are connected together.

^[4] **REC**, **PLAY**, **FT**, **FWD**, **ERASE**, **VOL** and **RESET** must be at V_{CCD}.

^[5] Balanced input signal applied between MIC+ and MIC- as shown in the applications example. Single-ended MIC+ or MIC- input is recommended no more than 150 mV p-p.

ISD1700 SERIES

9.2 AC PARAMETERS

CHARACTERISTIC	SYMBOL	MIN	TYP ^[1]	MAX	UNITS	CONDITIONS
Sampling Frequency ^[2]	F_S	4		12	kHz	^[2] ^[4]
Duration ^[3]	T_{Dur}		Refer to duration table		sec	^[3]
Rising Time	T_r			100	nsec	
Falling Time	T_f			100	nsec	
Debounce Time	T_{Deb}	$192/F_S$			msec	^[4]
Ramp Up Time	T_{RU}		$128/F_S$		msec	
Ramp Down Time	T_{RD}		$128/F_S$		msec	
Initial Scan Time after power is applied	T_{Sc1}			$DRN/8/F_S$	msec	DRN= device row# ^[4]
Initial Scan Time from PD state	T_{Sc2}			$DRN/16/F_S$	msec	After a PB operation is run ^[4]
End Recording Time	T_{ER}			$32/F_S$	msec	^[4]
LED High Time	T_{LH}			$0.5K/F_S$	msec	^[4]
LED Flash Time for SE1	T_{LS1}		$3.5K/F_S$		sec	SE1 not recorded ^[5]
LED Flash Time for SE2	T_{LS2}		$7.5K/F_S$		sec	SE2 not recorded ^[5]
LED Flash Time for SE3	T_{LS3}		$11.5K/F_S$		sec	SE3 not recorded ^[5]
LED Flash Time for SE4	T_{LS4}		$15.5K/F_S$		sec	SE4 not recorded ^[5]
SE1 Recorded Duration	T_{SE1}			$4K/F_S$	sec	^[4] ^[5]
SE2 Recorded Duration	T_{SE2}			$4K/F_S$	sec	^[4] ^[5]
SE3 Recorded Duration	T_{SE3}			$4K/F_S$	sec	^[4] ^[5]
SE4 Recorded Duration	T_{SE4}			$4K/F_S$	sec	^[4] ^[5]
Erase Time	T_E		$10MRN/F_S$		sec	MRN=message row # ^[4]
Global Erase Wait Time	T_{GE1}			$20K/F_S$	sec	^[4] ^[5]
Global Erase Time	T_{GE2}		$34/F_S$		sec	
RESET Pulse	T_{Reset}	1			μsec	All F_S ^[4]
Settle Time	T_{Set1}			$128/F_S$	msec	^[4]
Settle Time after Reset	T_{Set2}			$64/F_S$	msec	^[4]
LED Error Time	T_{LErr}			$27.5K/F_S$	msec	^[4] ^[5]
LED Cycle frequency	T_{Cyc}	1		4	Hz	Pending upon F_S

Notes: ^[1] Typical values: $V_{CC} = 4.5V$, $F_S = 8kHz$ and @ $T_A = 25^\circ C$, unless otherwise stated.

^[2] Characterization data shows that sampling frequency resolution is ± 5 percent across temperature and voltage ranges.

^[3] Characterization data shows that duration resolution is ± 5 percent across temperature and voltage ranges.

^[4] $V_{CC} = 2.4V \sim 5.5V$

^[5] $K = 1024$

ISD1700 SERIES

10 TYPICAL APPLICATION CIRCUITS

The following typical applications examples on ISD1700 Series are for references only. They make no representation or warranty that such applications shall be suitable for the use specified. Each design has to be optimized in its own system for the best performance on voice quality, current consumption, functionalities and etc.

The below notes apply to the following applications examples:

- * These capacitors may be needed in order to optimize for the best voice quality, which is also dependent upon the layout of the PCB. Depending on system requirements, they can be 10 μF , 4.7 μF or other values. Please refer to the applications notes or consult Winbond for layout advice.
- ** It is important to have a separate path for each ground and power back to the related terminals to minimize the noise. Also, the power supplies should be decoupled as close to the device as possible.

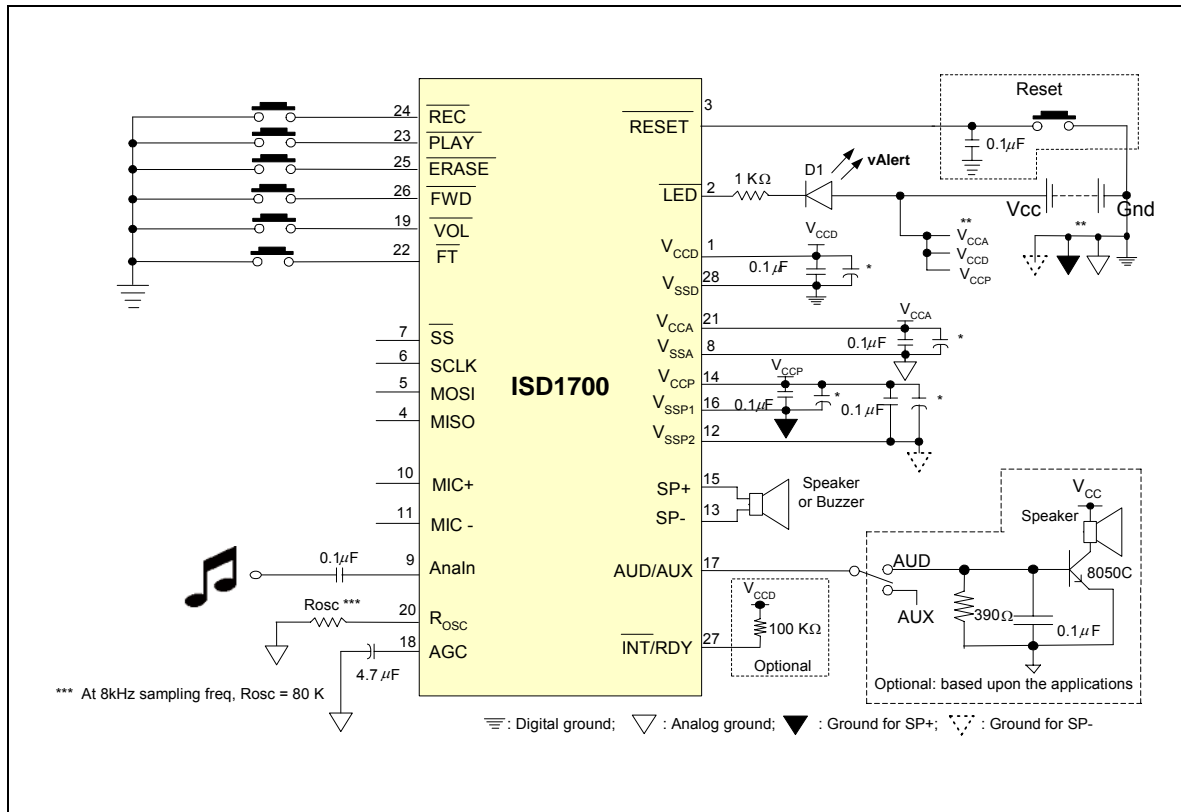

Example #1: Recording using microphone input via push-button controls

ISD1700 SERIES

Example #2: Recording using Analn input via push-button controls

ISD1700 SERIES

Example #3: Connecting the SPI Interface to a microcontroller

10.1 GOOD AUDIO DESIGN PRACTICES

To ensure the highest quality of voice reproduction, it is important to follow good audio design practices in layout and power supply decoupling. See recommendations from below links or other Application Notes in our websites.

Winbond products are not designed, intended, authorized or warranted for use as components in systems or equipment intended for surgical implantation, atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, or for other applications intended to support or sustain life. Furthermore, Winbond products are not intended for applications wherein failure of Winbond products could result or lead to a situation wherein personal injury, death or severe property or environmental damage could occur.

Winbond customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Winbond for any damages resulting from such improper use or sales.

The contents of this document are provided only as a guide for the applications of Winbond products. Winbond makes no representation or warranties with respect to the accuracy or completeness of the contents of this publication and reserves the right to discontinue or make changes to specifications and product descriptions at any time without notice. No license, whether express or implied, to any intellectual property or other right of Winbond or others is granted by this publication. Except as set forth in Winbond's Standard Terms and Conditions of Sale, Winbond assumes no liability whatsoever and disclaims any express or implied warranty of merchantability, fitness for a particular purpose or infringement of any Intellectual property.

The contents of this document are provided "AS IS", and Winbond assumes no liability whatsoever and disclaims any express or implied warranty of merchantability, fitness for a particular purpose or infringement of any Intellectual property. In no event, shall Winbond be liable for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information) arising out of the use of or inability to use the contents of this documents, even if Winbond has been advised of the possibility of such damages.

Application examples and alternative uses of any integrated circuit contained in this publication are for illustration only and Winbond makes no representation or warranty that such applications shall be suitable for the use specified.

The 100-year retention and 100K record cycle projections are based upon accelerated reliability tests, as published in the Winbond Reliability Report, and are neither warranted nor guaranteed by Winbond. This product incorporates SuperFlash®.

This datasheet and any future addendum to this datasheet is(are) the complete and controlling ISD® ChipCorder® product specifications. In the event any inconsistencies exist between the information in this and other product documentation, or in the event that other product documentation contains information in addition to the information in this, the information contained herein supersedes and governs such other information in its entirety. This datasheet is subject to change without notice.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
