

GaAs PHEMT MMIC DRIVER AMPLIFIER, 5 - 17 GHz

Typical Applications

The HMC633 is ideal for:

- Point-to-Point Radios
- Point-to-Multi-Point Radios & VSAT
- LO Driver for Mixers
- Military & Space

Features

- Gain: 29 dB
- P1dB: +23 dBm
- Output IP3: +30 dBm
- Saturated Power: +24 dBm @ 27% PAE
- Supply Voltage: +5V @ 180 mA
- 50 Ohm Matched Input/Output
- Die Size: 2.07 x 0.93 x 0.1 mm

Functional Diagram

General Description

The HMC633 is a GaAs MMIC PHEMT Driver Amplifier die which operates between 5 and 17 GHz. The amplifier provides up to 31 dB of gain, +30 dBm Output IP3, and +23 dBm of output power at 1 dB gain compression, while requiring 180 mA from a +5V supply. The HMC633 is an ideal driver amplifier for microwave radio applications from 5 to 17 GHz, and may also be biased at +5V, 130 mA to provide 2 dB lower gain with improved PAE. The HMC633 amplifier I/O's are DC blocked and internally matched to 50 Ohms facilitating easy integration into Multi-Chip-Modules (MCMs). All data is taken with die connected at input and output RF ports via one 1 mil wedge bond with minimal length of 0.31 mm (12 mils).

Electrical Specifications, $T_A = +25^\circ C$, $V_{dd1}, V_{dd2}, V_{dd3}, V_{dd4} = 5V$, $I_{dd} = 180 mA$ ^[1]

| Parameter | Min. | Typ. | Max. | Min. | Typ. | Max. | Units | |
|---|-------|-------|--------|------|-------|-------|-------|-----|
| Frequency Range | 5 - 9 | | 9 - 17 | | | | | GHz |
| Gain | 27 | 31 | | 26 | 29 | | dB | |
| Gain Variation Over Temperature | | 0.035 | 0.044 | | 0.040 | 0.050 | dB/°C | |
| Input Return Loss | | 14 | | | 16 | | dB | |
| Output Return Loss | | 15 | | | 12 | | dB | |
| Output Power for 1 dB Compression (P1dB) | 21 | 23 | | 21 | 23 | | dBm | |
| Saturated Output Power (Psat) | | 24 | | | 23.5 | | dBm | |
| Output Third Order Intercept (IP3) | | 30 | | | 30 | | dBm | |
| Noise Figure | | 9 | | | 7 | | dB | |
| Supply Current (I _{dd} = I _{dd1} + I _{dd2} + I _{dd3} + I _{dd4}) | | 180 | | | 180 | | mA | |

^[1] Adjust V_{gg} between -2 to 0V to achieve I_{dd} = 180mA Typical

Outline Drawing

NOTES:

1. ALL DIMENSIONS ARE IN INCHES [MM]
2. DIE THICKNESS IS .004"
3. TYPICAL BOND IS .004" SQUARE
4. BACKSIDE METALLIZATION: GOLD
5. BOND PAD METALLIZATION: GOLD
6. BACKSIDE METAL IS GROUND.
7. CONNECTION NOT REQUIRED FOR UNLABELED BOND PADS.

Die Packaging Information ^[1]

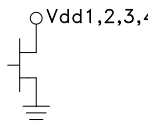

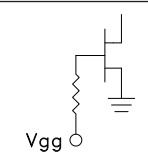

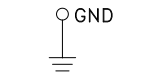

| Standard | Alternate |
|-----------------|-----------|
| GP-2 (Gel Pack) | [2] |

[1] Refer to the "Packaging Information" section for die packaging dimensions.

Pad Descriptions

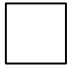

| Pad Number | Function | Description | Interface Schematic |
|------------|------------------------|---|---|
| 1 | RFIN | This pad is AC coupled and matched to 50 Ohms. |  |
| 2, 3, 4, 5 | Vdd1, Vdd2, Vdd3, Vdd4 | Power Supply Voltage for the amplifier. See assembly diagram for required external components. |  |
| 6 | RFOUT | This pad is AC coupled and matched to 50 Ohms. |  |
| 7 | Vgg | Gate control for amplifier, please follow "MMIC Amplifier Biasing Procedure" Application Note. See assembly diagram for required external components. |  |
| Die Bottom | GND | Die bottom must be connected to RF/DC ground. |  |

Mounting & Bonding Techniques for Millimeterwave GaAs MMICs

The die should be attached directly to the ground plane eutectically or with conductive epoxy (see HMC general Handling, Mounting, Bonding Note).

50 Ohm Microstrip transmission lines on 0.127mm (5 mil) thick alumina thin film substrates are recommended for bringing RF to and from the chip (Figure 1). If 0.254mm (10 mil) thick alumina thin film substrates must be used, the die should be raised 0.150mm (6 mils) so that the surface of the die is coplanar with the surface of the substrate. One way to accomplish this is to attach the 0.102mm (4 mil) thick die to a 0.150mm (6 mil) thick molybdenum heat spreader (moly-tab) which is then attached to the ground plane (Figure 2).

Microstrip substrates should be brought as close to the die as possible in order to minimize bond wire length. Typical die-to-substrate spacing is 0.076mm to 0.152 mm (3 to 6 mils).

Handling Precautions

Follow these precautions to avoid permanent damage.

Storage: All bare die are placed in either Waffle or Gel based ESD protective containers, and then sealed in an ESD protective bag for shipment. Once the sealed ESD protective bag has been opened, all die should be stored in a dry nitrogen environment.

Cleanliness: Handle the chips in a clean environment. DO NOT attempt to clean the chip using liquid cleaning systems.

Static Sensitivity: Follow ESD precautions to protect against ESD strikes.

Transients: Suppress instrument and bias supply transients while bias is applied. Use shielded signal and bias cables to minimize inductive pick-up.

General Handling: Handle the chip along the edges with a vacuum collet or with a sharp pair of bent tweezers. The surface of the chip has fragile air bridges and should not be touched with vacuum collet, tweezers, or fingers.

Mounting

The chip is back-metallized and can be die mounted with AuSn eutectic preforms or with electrically conductive epoxy. The mounting surface should be clean and flat.

Eutectic Die Attach: A 80/20 gold tin preform is recommended with a work surface temperature of 255 °C and a tool temperature of 265 °C. When hot 90/10 nitrogen/hydrogen gas is applied, tool tip temperature should be 290 °C. DO NOT expose the chip to a temperature greater than 320 °C for more than 20 seconds. No more than 3 seconds of scrubbing should be required for attachment.

Epoxy Die Attach: Apply a minimum amount of epoxy to the mounting surface so that a thin epoxy fillet is observed around the perimeter of the chip once it is placed into position. Cure epoxy per the manufacturer's schedule.

Wire Bonding

Ball or wedge bond with 0.025mm (1 mil) diameter pure gold wire. Thermosonic wirebonding with a nominal stage temperature of 150 °C and a ball bonding force of 40 to 50 grams or wedge bonding force of 18 to 22 grams is recommended. Use the minimum level of ultrasonic energy to achieve reliable wirebonds. Wirebonds should be started on the chip and terminated on the package or substrate. All bonds should be as short as possible <0.31mm (12 mils).

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
