DATA SHEET**LV1116N/NV**

Bi-CMOS IC

Surround Processor ICs for

Electronic Volume Control

Overview

The LV1116N/NV are sound processor ICs developed for use in TV sets.

They incorporate the surround processing functions including (AViSS), pseudo stereo function, (L+R) output, and the major functional blocks of an electronic volume control IC.

Features

- Input function SWs (stereo inputs [L, R]).
- Line out pin (through output).
- Input gain control (-6dB, -4dB, 0dB, 4dB, 6dB: 5 positions).
- AViSS (ON/OFF/4-stage level control).
- Tone control (BASS: ±20dB, TREBLE: ±18dB [in 2dB steps]).
- Volume control (0dB to -14dB: 1dB steps/-14dB to -80dB: 2dB steps/-∞=-82dB).
- Balance control.
- Through mode/Mute mode.
- Pseudo stereo function (ON/OFF/MONO).
- L+R output with LPF (Mute + 7-stage level control: 8 positions).
- I²C bus control.

* Initial gain of L+R AMP can be controlled by the resistance value of external resistor.

Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V _{CC} max		10.5	V
Allowable power dissipation 1	P _d max1	Ta ≤ 70°C *, DIP	700	mW
Allowable power dissipation 2	P _d max2	Ta ≤ 70°C *, SSOP	550	mW
Operating temperature	T _{opr}		-25 to +70	°C
Storage temperature	T _{stg}		-40 to +125	°C

Note *: Mounted on a specified board: 114.3mm×76.1mm×1.6mm, glass epoxy board

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.
- Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

I²C BUS Control Signal

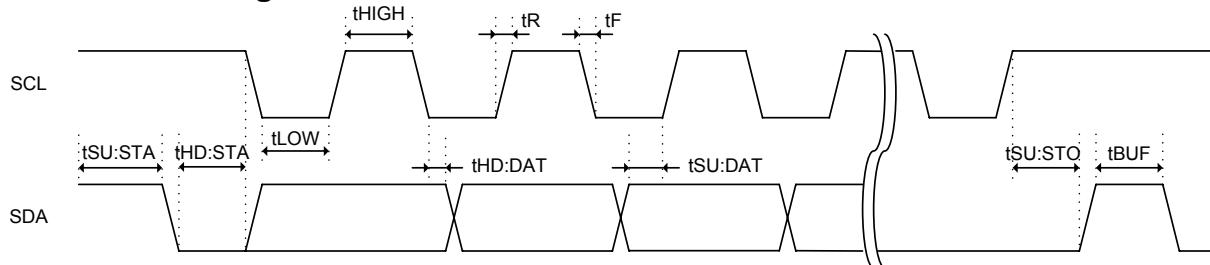

Figure1 I²C BUS Control Signal timing chart

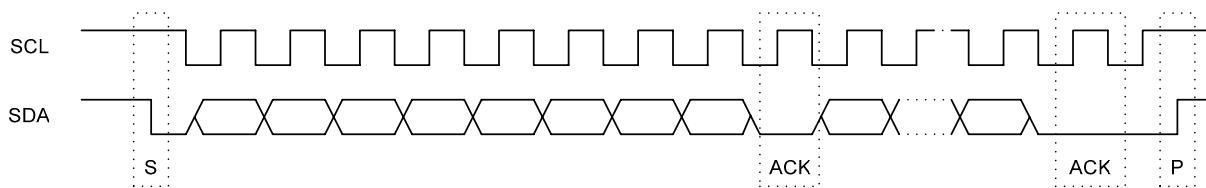

I²C BUS register

1) The explanation of I²C Bus

I²C Bus (Inter IC Bus) is the bus system which the PHILIPS company developed.

It does controls such as the start, the stop by two control signals of SDA (Serial Data) and SCL (Serial Clock).

The output of each signal is open drain and forms out of wired OR.

S: Start condition

P: Stop condition

ACK: Acknowledge

Data is transmitted in the MSB first. 1 unit is composed of 8 bits and ACK is put back from the slave to confirm. Slave IC reads data with rising edge of SCL. Master IC changes data by falling edge in SCL.

2) The control register

Table1 Slave Address

MSB								LSB			
1	1	1	0	1	1	1	0				

Note; LV1116N/NV are reception exclusive use. It depends and it uses LSB by the "0" fixation.

Treble / Bass Band Block Equivalent Circuit Diagram

During boost, SW1 and SW3 are ON, during cut, SW2 and SW4 are ON, when 0dB, 0dB_{SW} and SW2 and SW3 are ON.

L+R Block Equivalent Circuit Diagram

ILV00257

Tone Circuit Constant Calculation Examples

Treble Band Circuit: The shelving characteristics can be obtained for the treble band. The equivalent circuit and calculation formula during boost are indicated below.

- Calculation example 1

Specification Set frequency: $f = 10000\text{Hz}$

Gain during maximum boost: $G_{+18\text{dB}} = 17.5\text{dB}$

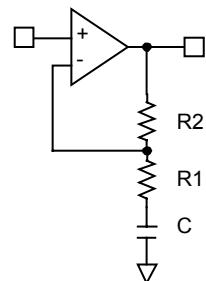

Let us use $R1 = 6.51\text{k}\Omega$ and $R2 = 45.19\text{k}\Omega$

The above constants are inserted in the following formula

$$G = 20 \times \log_{10} \left[1 + \frac{R2}{\sqrt{R1^2 + (1/\omega C)^2}} \right]$$

$$C = \frac{1}{2\pi f \sqrt{\left[\frac{R2}{10^{G/20}-1} \right]^2 - R1^2}}$$

$$= \frac{1}{2\pi 10000 \sqrt{\left[\frac{45190}{7.50 - 1} \right]^2 - 6510^2}} \approx 6500 \text{ (pF)}$$

Bass Band Circuit: The equivalent circuit and the formula for calculating the external RC with a mean frequency of 100Hz are shown below.

- Calculation example 1

specification Mean frequency: $f_0 = 100\text{Hz}$

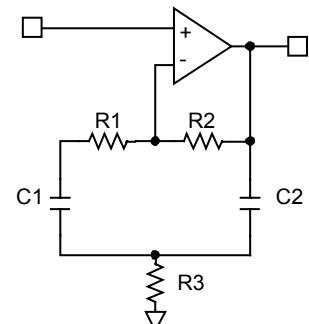

Gain during maximum boost: $G_{+20\text{dB}} = 20\text{dB}$

Let us use $R1 = 0\text{k}\Omega$ and $R2 = 66.7\text{k}\Omega$, and $C1 = C2 = C$.

We obtain $R3$ from $G = 20\text{dB}$

$$G = 20 \times \log_{10} \left[1 + \frac{R2}{2R3} \right]$$

$$R3 = \frac{R2}{2(10^{G+20\text{dB}/20} - 1)} = \frac{66700}{2(10 - 1)} \approx 3.6\text{k}\Omega$$

We obtain C from mean frequency $f_0 = 100\text{Hz}$

$$f_0 = \frac{1}{2\pi \sqrt{(R3R2C1C2)}}$$

$$C = \frac{1}{2\pi f_0 \sqrt{R3R2}} = \frac{1}{2\pi \times 100 \sqrt{66700 \times 3600}} \approx 0.1\mu\text{F}$$

We obtain Q

$$Q = \frac{R3R2}{2R3} \times \frac{1}{\sqrt{R3R2}} \approx 2.15$$

Note item when using

(1) When turning on the power, the setting inside is unsettled.

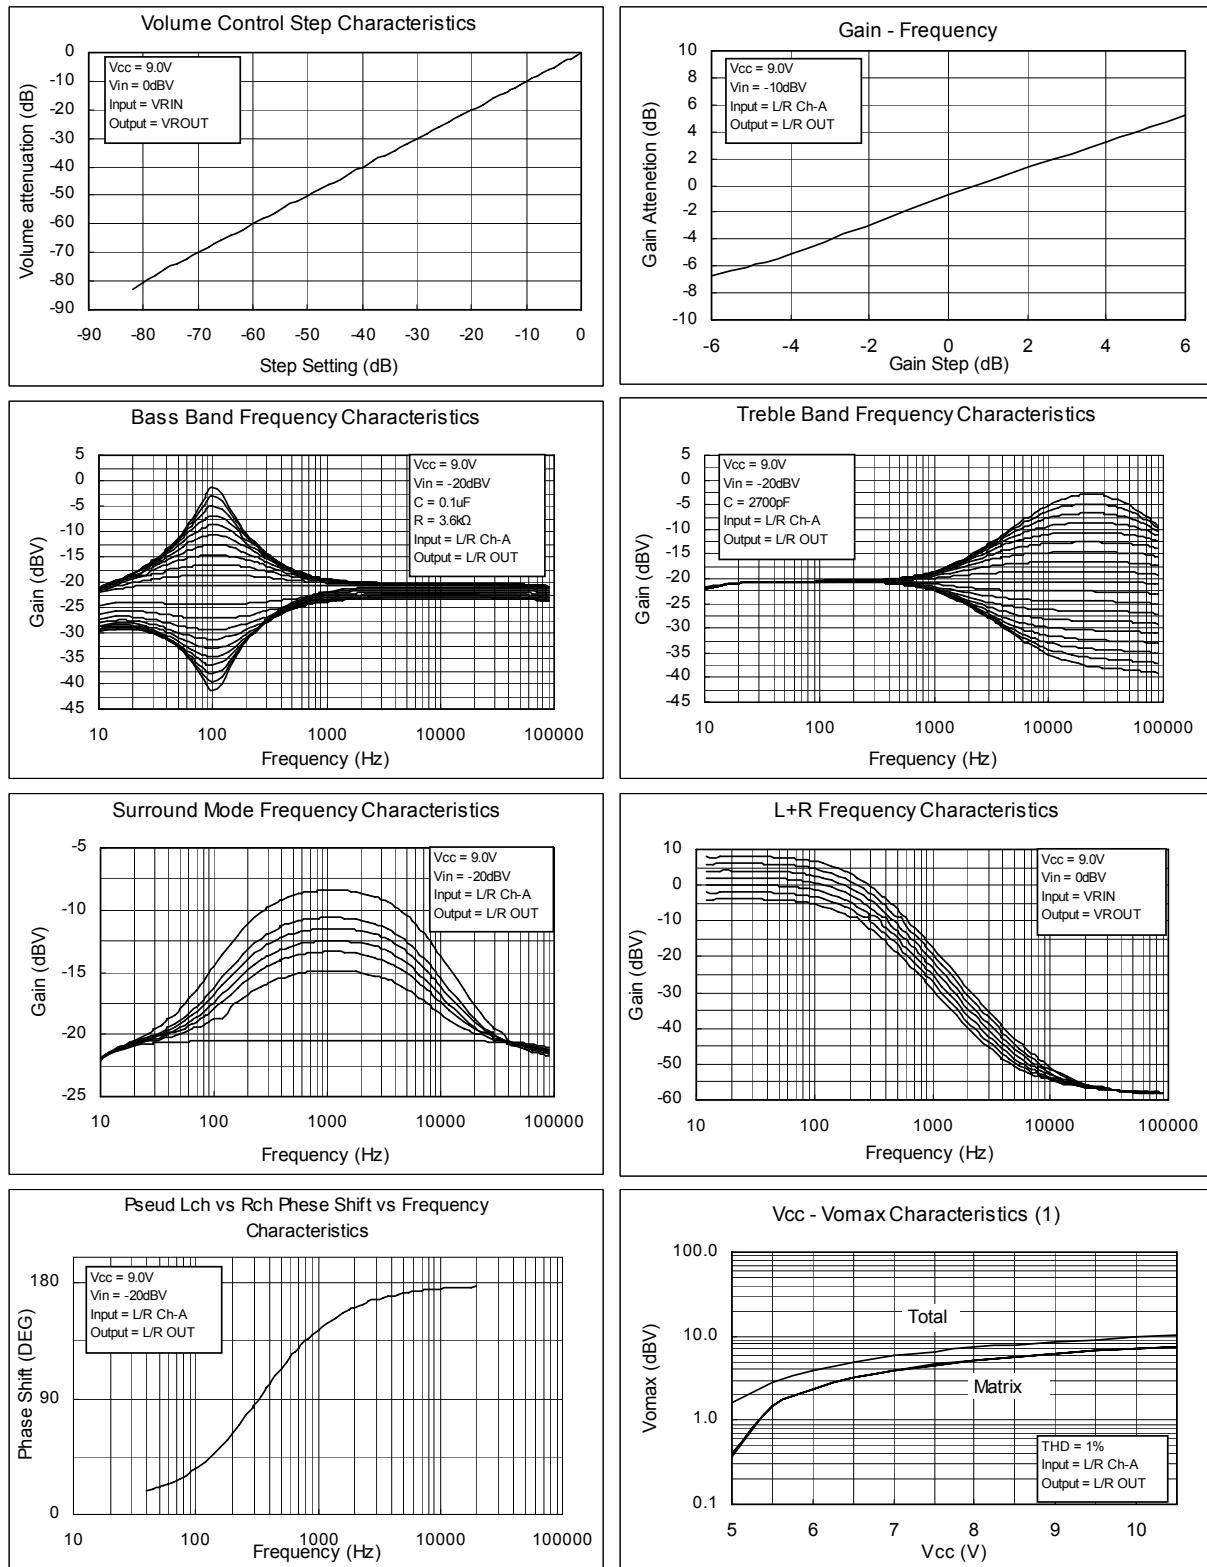

Before setting control data, it does a mute.

(2) To prevent the digital noise of the high frequency influence a terminal. (SCL, SDA)

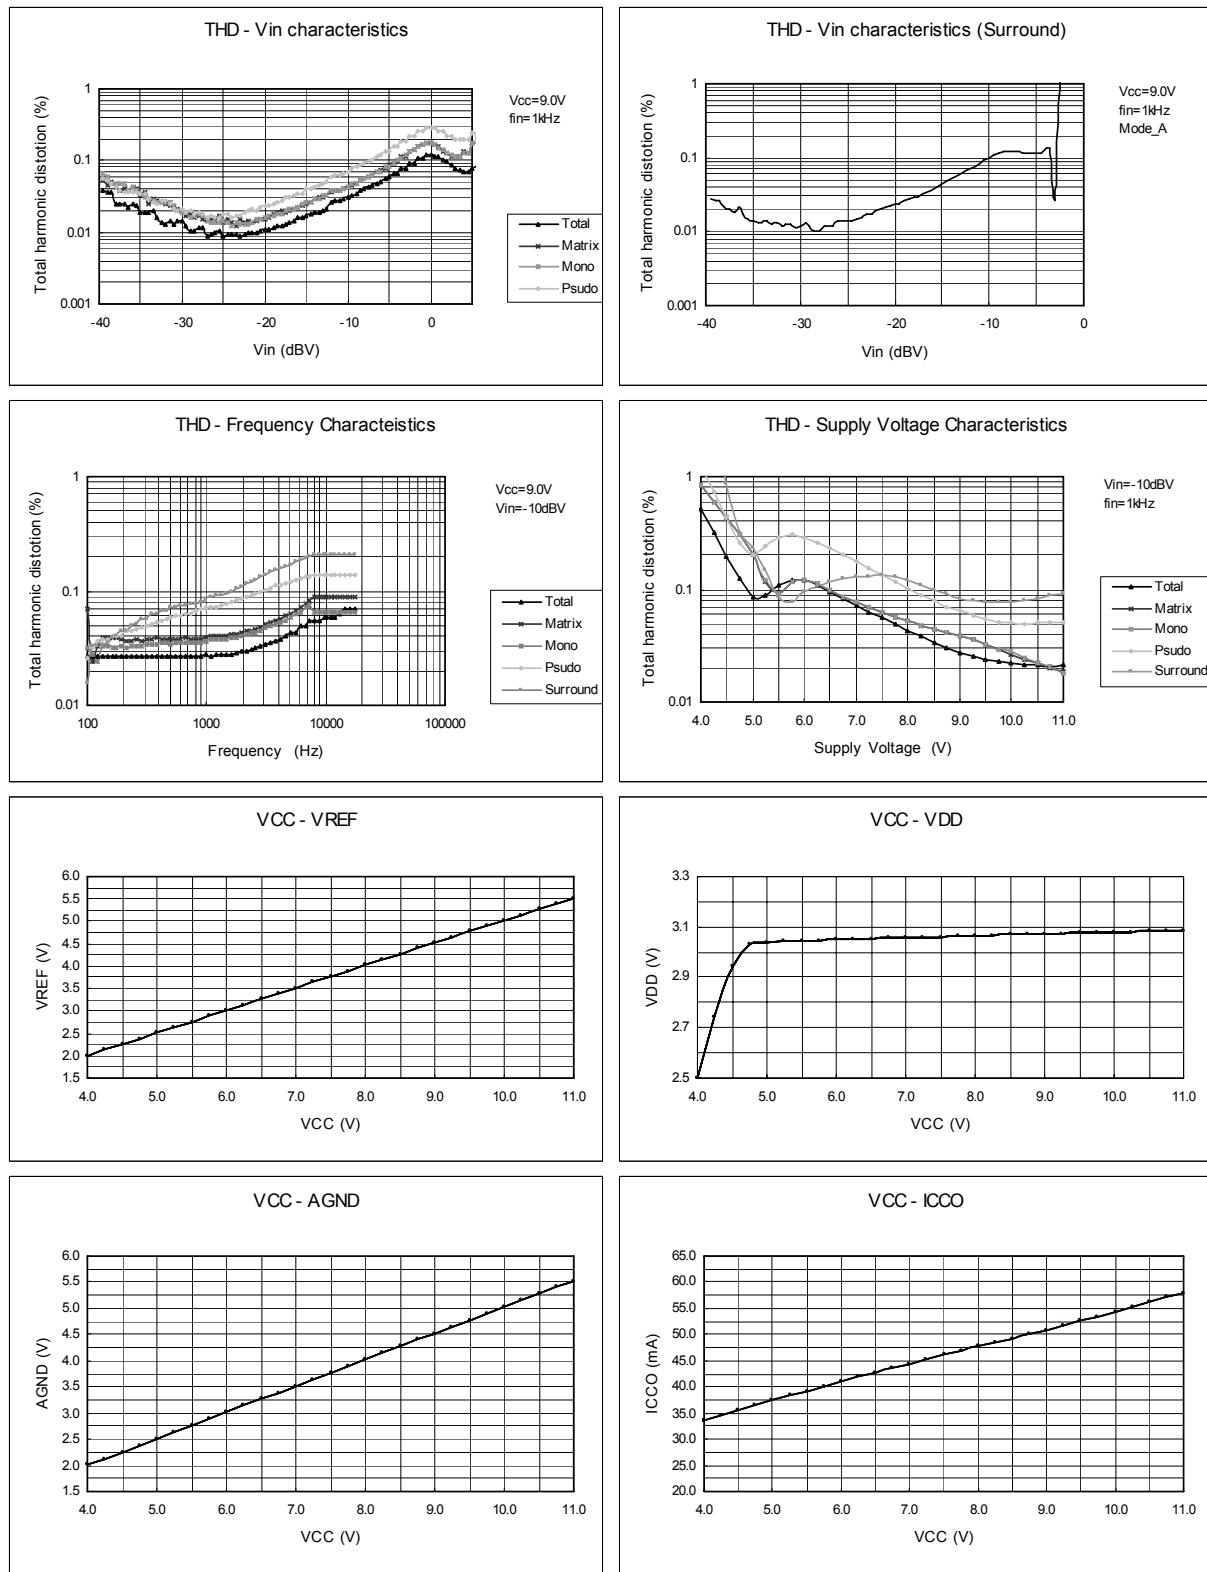

It can be protected by a signal line in the ground pattern or by the shielding cable.

(3) To prevent the noise in changing a mode, please set the mute ON.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.

This catalog provides information as of January, 2008. Specifications and information herein are subject to change without notice.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
