

Features

- Ultra Low Quiescent Current: 4 μ A
- Ultra Low Dropout Voltage:
200mV@3.3V/150mA
- Fixed Output Voltages: 1.2V~3.5V,
steps 100mV
- Guaranteed 150mA Output Current
- Stable with 1 μ F Output Capacitor
- Ceramic Capacitor can be used
- Current Limit Protection
- Controlled Short Circuit Current: 50mA
- Build in Thermal Protection
- SOT-23, SOT-23-5 and SOT-89 packages
- Lead Free Available (RoHS Compliant)

Applications

- Hand-held Equipment
- RTC or CMOS Backup Power
- Battery Powered Equipment

General Description

The APL5101/2 are micro-power, ultra low dropout linear regulator, which operate from 2V to 6V input voltage and deliver up to 150mA. Typical dropout voltage is only 200mV at 150mA loading. Designed for use in battery-powered system, the low 4 μ A quiescent current makes it an ideal choice. Design with an internal P-channel MOSFET pass transistor, the APL5101/2 maintain a low supply current, independent of the load current and dropout voltage. Other features include thermal-shutdown protection and current limit protection to ensure specified output current and controlled short-circuit current. The APL5101/2 regulator come in a miniature SOT-23, SOT-23-5 and SOT-89 packages.

Note: ANPEC lead-free products contain molding compounds/die attach materials and 100% matte tin plate termination finish; which are fully compliant with RoHS and compatible with both SnPb and lead-free soldering operations. ANPEC lead-free products meet or exceed the lead-free requirements of IPC/JEDEC J STD-020C for MSL classification at lead-free peak reflow temperature.

Electrical Characteristics

Unless otherwise noted these specifications apply over full temperature, $V_{IN} = 5V$, $C_{IN} = C_{OUT} = 1\mu F$, $T_A = -40$ to $85^\circ C$. Typical values refer to $T_A = 25^\circ C$.

Symbol	Parameter	Test Condition	APL5101/2			Unit
			Min.	Typ.	Max.	
V_{IN}	Input Voltage		2		6	V
V_{OUT}	Output Voltage Accuracy	$V_{IN} = 5V$	-2		2	%
	Output Voltage Range		1.2		3.5	V
I_{LIMIT}	Current Limit	$V_{IN} = 5V$	250	300	370	mA
I_Q	Quiescent Current	$I_{OUT} = 0mA$		4	7	μA
		$I_{OUT} = 150mA$		4	10	
	Shutdown Supply Current	$V_{SHDN} = High$		0.1	1	
I_{OUT}	Load Current		150			mA
REG_{LINE}	Line Regulation	$V_{OUT} + 0.5V < V_{IN} < 6V$, $I_{OUT} = 10mA$		2	10	mV
REG_{LOAD}	Load Regulation	$V_{IN} = 5V$, $0mA < I_{OUT} < I_{MAX}$		15	30	mV
V_{DROP}	Dropout Voltage (NOTE)	$V_{OUT} = 1.4V$, $I_{OUT} = 150mA$		1000	1300	mV
		$V_{OUT} = 1.8V$, $I_{OUT} = 150mA$		600	900	
		$V_{OUT} = 3.3V$, $I_{OUT} = 150mA$		200	300	
PSRR	Ripple Rejection	$F = 1kHz$, $C_{OUT} = 1\mu F$, $I_{OUT} = 10mA$	30	40		dB
I_{SHORT}	Short Circuit Current	$V_{OUT} = 0V$	40	50	60	mA
e_n	Noise	$F = 22Hz$ to $80kHz$, $C_{OUT} = 1\mu F$, $I_{OUT} = 10mA$		200	250	μV_{RMS}
I_{SHDN}	Shutdown Input Bias Current	$V_{SHDN} = Low$		0.1	1	μA
V_{SHDN}	High Threshold Voltage		1.6		$V_{IN} + 0.3$	V
	Low Threshold Voltage		-0.3		0.4	V
T_{EXIT}	Shutdown Exit Delay	$V_{OUT} = 90\%$, $R_{LOAD} = 25\Omega$	1.5	2	2.5	mS
OTS	Over Temperature Shutdown		120	135		$^\circ C$
	Over Temperature Shutdown Hysteresis		10	20	30	$^\circ C$
TC	Output Voltage Temperature Coefficient	$T_A = -40^\circ C \sim 100^\circ C$		100	200	ppm/ $^\circ C$
C_{OUT}	Output Capacitor		1		10	μF
	ESR		10		1000	m Ω

Note: Dropout voltage definition: $V_{IN} - V_{OUT}$ when V_{OUT} is 2% below the value of V_{OUT} for $V_{IN} = V_{OUT} + 1V$.

Application Information

Capacitor Selection and Regulation Stability

The APL5101/2 use at least a 1 μ F capacitor on the input. This capacitor can use Aluminum, Tantalum or Ceramic capacitors. Input capacitor with large value and low ESR provides better PSRR and line transient response. The output capacitor also can use Aluminum, Tantalum or Ceramic capacitor, and its proper values is recommended 1 μ F, ESR must be above 10m Ω . Large output capacitor values can reduce noise and improve load-transient response, stability, and PSRR. With X5R and Y5V dielectrics, 1 μ F is sufficient at all operating temperatures. The selection of output capacitor is important because it with COUT form a zero to provide the sufficient phase margin.

Input-Output (Dropout) Voltage

The minimum input-output voltage differential (dropout) determines the lowest usable supply voltage. The dropout voltage is a function of drain-to-source on resistance multiplied by the load current.

Current Limit and Short Circuit

APL5101/2 include a current-limit circuitry for this linear regulator. The current limit protection, which sense the current flows the P-channel MOSFET, and controls the output voltage. The point where limiting occurs is $I_{OUT}=300\text{mA}$. When output is shorted to ground, the APL5101/2 will keep short circuit current at 50mA. This design is a method for an indefinite amount of time without damaging to the part.

Thermal Protection

Thermal protection limits total power dissipation in the APL5101/2. When the junction temperature exceeds $T_J = +135^\circ\text{C}$, the thermal sensor generate a logic signal to turn off the pass transistor and let IC to cool. When the IC's junction temperature cools by 20°C , the thermal sensor will turn the pass transistor on again,

resulting in a pulsed output during continuous thermal protection. Thermal protection is designed to protect the IC in the event of fault conditions. For continual operation, do not exceed the absolute maximum junction temperature rating of $T_J = +140^\circ\text{C}$.

Operating Region and Power Dissipation

The thermal resistance of the case and circuit board, ambient and junction air temperature, and the rate of air flow all control the APL5101/2's maximum power dissipation. The power dissipation across the device is $P = I_{OUT}(V_{IN}-V_{OUT})$. The maximum power dissipation is:

$$P_{MAX} = (T_J - T_A) / (\theta_{JC} + \theta_{CA})$$

where $T_J - T_A$ is the temperature difference between the junction and ambient air. θ_{JC} is the thermal resistance of the package, θ_{CA} is the thermal resistance through the printed circuit board, copper traces, and other materials to the surrounding air. The GND pin provides an electrical connection to ground and channeling heat away. The printed circuit board (PCB) forms a heat sink and dissipates most of the heat into ambient air.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
