1. Open Circuit Inductance (OCL) Test parameters: 1.0MHz, 0.25Vrms, 10Aac, +25°C
2. Irms: DC current for an approximate temperature rise of 40°C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, airflow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 125°C under worst case operating conditions verified in the end application.
3. Isat : Peak current for approximately 30% rolloff @ +20°C.
4. Applied Volt-Time product (V- $\mu$ s) across the inductor. This value represents the applied V- $\mu$ s at 500kHz necessary to generate a core loss equal to 10% of the total losses for 40°C temperature rise.
5. Part Number Definition: FP2-xyyy-R  
 FP2 = Product code and size  
 x = Version indicator, S = single conductor, V = single conductor, D = dual conductor  
 yyy = Inductance value in uH, R = decimal point  
 -R suffix = RoHS compliant
