DUAL 2-INPUT EXCLUSIVE-OR GATE

Description

The 74LVC2G86 is a dual, two input EXCLUSIVE-OR gate. Both gates have push-pull outputs designed for operation over a power supply range of 1.65V to 5.5V. The device is fully specified for partial power down applications using I_{OFF}. The I_{OFF} circuitry disables the output, preventing damaging current backflow when the device is powered down. Each gate performs the positive Boolean function:

$$Y = A \oplus B \text{ or } Y = \overline{A}B + A\overline{B}$$
