

General Description

The TQP3M9037 is a high-linearity, ultra-low noise gain block amplifier in a small 2 x 2 mm surface-mount package. At 1.95 GHz, the amplifier typically provides 20 dB gain, +35 dBm OIP3, and 0.4 dB noise figure while drawing 70 mA current from a +5V supply. This amplifier does not require a negative supply for operation and can be biased from a single positive supply ranging from +3.3 to +5 volts. The device is housed in a green/RoHS-compliant industry-standard 2 x 2 mm package.

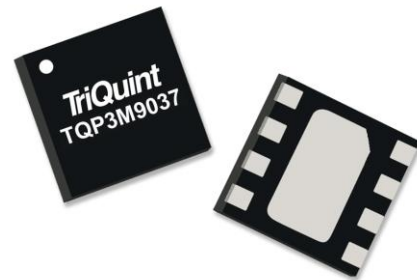

The TQP3M9037 is internally matched using a high performance E-pHEMT process and only requires four external components for operation from a single positive supply: an external RF choke and blocking/bypass capacitors. This low noise amplifier contains an internal active bias to maintain high performance over temperature and integrates a shut-down biasing capability to allow for operation for TDD applications.

The TQP3M9037 covers the 0.7 – 6.0 GHz frequency band and is targeted for wireless infrastructure. It is pin compatible with the low-band, 0.4–2.0 GHz TQP3M9036.

Product Features

- 0.7-6.0 GHz Operational Bandwidth
- Ultra Low Noise Figure, 0.4 dB NF at 1.95 GHz
- High Gain, 20 dB Gain at 1.95 GHz
- High Linearity, +35 dBm Output IP3
- High Input Power Ruggedness, +22 dBm CW
- Unconditionally Stable
- Integrated On-chip Matching, 50 Ohm In/Out
- Integrated Active Bias
- Integrated Shutdown Control Pin
- +3V to +5V Supply; Does Not Require -V_{gg}
- Pin Compatible with Low-Band TQP3M9036

Applications

- Repeaters
- Mobile Infrastructure
- LTE / WCDMA / CDMA / GSM
- General Purpose Wireless
- TDD or FDD Systems

TQP3M9037-PCB Evaluation Board

Notes:

1. See Evaluation Board PCB Information section for material and stack-up.
2. R3 (0 Ω jumper) is not shown on the schematic and may be replaced with copper trace in the target application layout.
3. All components are of 0402 size unless stated on the schematic.
4. C1, C2, and C3 are non-critical values. The reactive impedance should be as low as possible at the frequency of operation for optimal performance.
5. The L1 value is non-critical and needs to provide high reactive impedance at the frequency of operation.
6. R1 and R2 are optional and do not need to be loaded if the shut-down functionality is not needed; i.e. FDD applications. If R1 and R2 are not loaded, the LNA will operate in its standard "ON" state.
7. A through line is included on the evaluation board to de-embed the board losses.

+3.3 V V_{DD} Performance Improvement with External Input Bias

This page shows performance data of TQP3M9037 tuned for better input return loss for B7 UL. The device is biased at 3.3V V_{DD} . At this bias voltage the device draws about 45mA I_{DD} but the OIP3 drops by almost 5dB. To improve the linearity performance an external bias is introduced to the input port by a resistive divider tied to the 3.3V. This results in increased current draw of about 60mA and the OIP3 is up by 5dB.

+5 V V_{DD} Reduced Current Reference Design

This page shows performance data of TQP3M9037 with reduced current consumption of around 40mA. The V_{dd} is kept at +5V and to reduce the current a shunt resistor of 36K ohms is added at the input pin. This drops the gate voltage of the input transistor and hence bringing the bias point of the LNA down.

Pin Configuration and Description

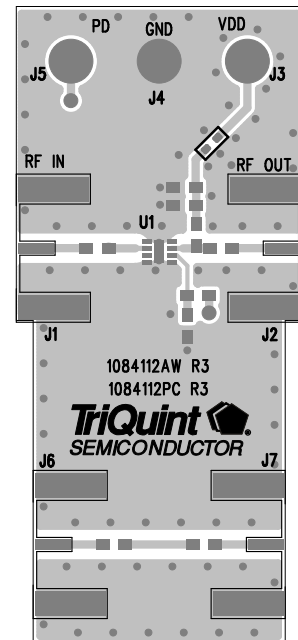

Pin No.	Label	Description
2	RF In	RF Input pin. A DC Block is required.
6	Shut Down	A high voltage turns off the device. If the pin is not connected or is less than 1V, then the device will operate under its normal operating condition.
7	RF Out / DCBias	RF Output pin. DC bias will also need to be injected through a RF bias choke/inductor for operation.
1, 3, 4, 5, 8	NC	No electrical connection. Provide grounded land pads for PCB mounting integrity.
Backside Paddle	RF/DC GND	RF/DC ground. Use recommended via pattern to minimize inductance and thermal resistance; see PCB Mounting Pattern for suggested footprint.

Mechanical Information

Package Marking and Dimensions

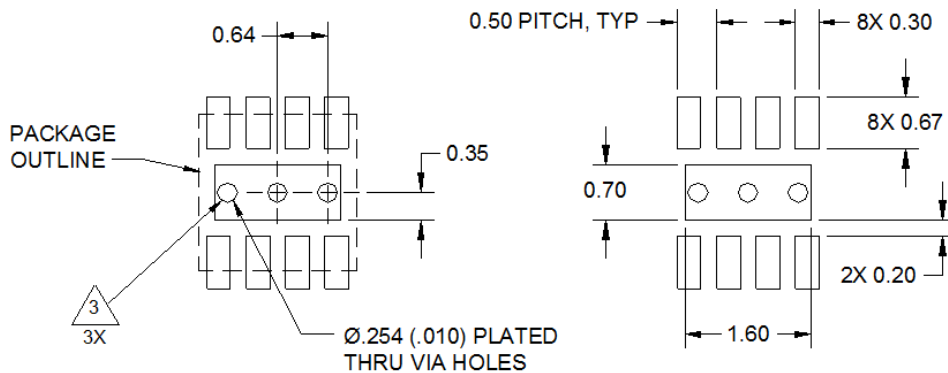

Marking: Part number – 9037
 Lot code – XXXX

Notes:

1. All dimensions are in millimeters. Angles are in degrees.
2. Except where noted, this part outline conforms to JEDEC standard MO-220, Issue E (Variation VGGC) for thermally enhanced plastic very thin fine pitch quad flat no lead package (QFN).
3. Dimension and tolerance formats conform to ASME Y14.4M-1994.
4. The terminal #1 identifier and terminal numbering conform to JESD 95-1 SPP-012.

PCB Mounting Pattern

Notes:

1. All dimensions are in millimeters. Angles are in degrees.
2. Use 1 oz. copper minimum for top and bottom layer metal.
3. Vias are required under the backside paddle of this device for proper RF/DC grounding and thermal dissipation. We recommend a 0.35mm (#80/.0135") diameter bit for drilling via holes and a final plated thru diameter of 0.25 mm (0.10").
4. Ensure good package backside paddle solder attach for reliable operation and best electrical performance.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
