

RYC91xx

PWM Power Supply Controller

Document: SCD 25391
Status: Preliminary
Rev. A April 16, 2003

GENERAL DESCRIPTION

The RYC91XX is a digital PWM controller designed for small power, universal line voltage applications.

The RYC91xx series of PWM controllers allows the designer to implement source switched architecture to control the HV MOSFET or emitter switched architecture to control a BJT. Using this technique, the pin count, as well as the number of external components are minimized.

The RYC91XX utilizes three-terminal operation by combining the feedback pin with the bias supply pin. Current sensing is incorporated within the device and is made possible through the unique source/emitter switching architecture.

The RYC91xx contains a startup current source, PWM generator, junction temperature monitor, current sensing and its comparator, and a high current open-drain output stage capable of carrying the entire primary side peak and RMS current for up to 5W applications.

FEATURES

- Unique emitter drive capability to switch BJT's
- Low operating current allows for low power consumption, green supply designs
- 3 terminal design in a TO-92 package
- Auto shut down and restart
- Cycle-by-cycle current limit
- Pulse skip mode operation
- OT protection
- UV protection
- Optional frequency dither to reduce Electromagnetic Interference (EMI)

APPLICATIONS

- Cell phone battery chargers
- PDA power supplies
- Digital Cameras
- Set-top cable converter boxes
- Digital video keep-alive supplies
- Low Quiescent current (Green) power supplies for appliances and White Goods
- Universal off-line power supplies (up to 5W)

ORDERING INFORMATION

Part Description	Voltage mode vs. Current mode	Frequency (kHz)	Current Limit (mA, typ)	Package Type
RYC9114-1T	Current	65	400	TO-92
RYC9114-2T	Voltage	65	400	TO-92
RYC9124-1T	Current	130	400	TO-92
RYC9124-2T	Voltage	130	400	TO-92

Note: Other options are available, please contact factory.

PIN CONFIGURATION

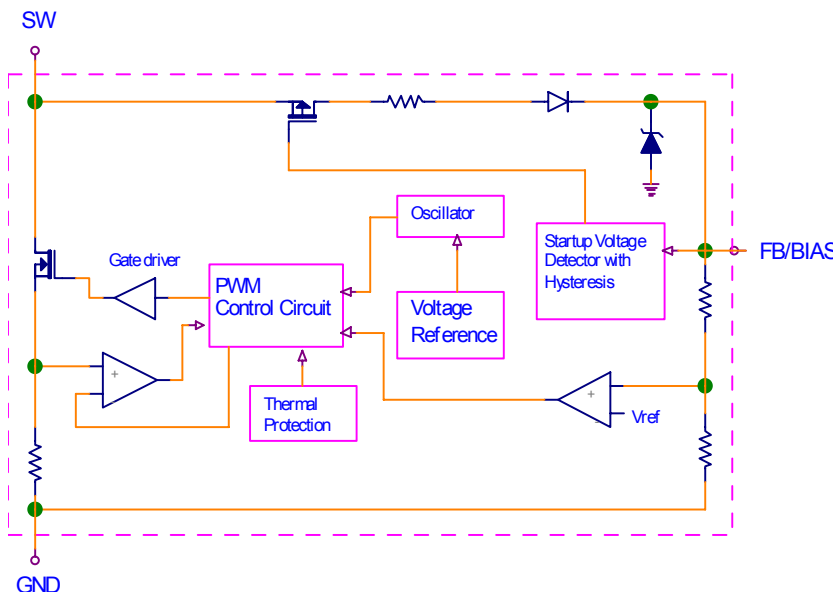

DEVICE MARKING

PIN DESCRIPTION

Pin Number	Pin Name	Pin Function
1	FB/BIAS	Input for both IC feedback and bias supply, acceptable range: 3.6 to 5.8V
2	GND	Control ground and supply return
3	SW	Switch output

ABSOLUTE MAXIMUM RATINGS (Notes 1,2)

Parameter	Symbol	Value	Units
Max Switch Voltage	V_{SW}	-0.3 to +25	V
Max Bias Supply Voltage	$V_{FB/BIAS}$	-0.3 to +6.7	V
Storage Temperature	T_S	-65 to +165	°C
Operating Junction Temperature	T_J	-20 to 125	°C
Max Power Dissipation	P_D	0.6	W
Junction To Ambient Thermal resistance	$R_{\theta,J-A}$	200	°C/W

Note 1. Operation beyond absolute maximum rating or improper use may result in permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods or to conditions beyond absolute maximum rating conditions may adversely affect device reliability. Functional operation under absolute maximum rating conditions is not implied.

Note 2. Devices are ESD sensitive. Handling precautions recommended.

ELECTRICAL CHARACTERISTICS ($T_A = 25^\circ\text{C}$ unless noted)

Parameters	Conditions	Min	Typ	Max	Units
FB/BIAS Clamp voltage	$I_{IN} = 5\text{mA}$	5.9	6.3	6.7	V
FB/BIAS Start Threshold		5.4	5.8	6.2	V
FB/BIAS UV Threshold	After turn on	3.4	3.6	4.0	V
Supply Current	No switching	0.2	0.4	1	mA
	Full load switching, $F_{SW} = 130\text{kHz}$	0.5	0.9	1.5	mA
OFF State Leakage Current	$V_{SW} = 10\text{V}$	0.2	2.2	30	μA
Switch to Bias Resistor	During startup, Note 3		2.5		$\text{k}\Omega$
Rise Time	1000 pF capacitor load with 15 Ω pull up resistor	15	30	70	ns
Fall Time	1000 pF capacitor load with 15 Ω pull up resistor	10	20	50	ns
Output Drive FET On Resistance	25 °C		1.9		Ω
	125 °C, Note 3		2.9		Ω
Thermal Shutdown Temperature	Note 3		145		°C
Thermal Shutdown Hysteresis	Note 3		14		°C
Output Current Limit	$di/dt = 100\text{mA}/\mu\text{s}$		400		mA
Output Current Limit Delay	$di/dt = 165\text{mA}/\mu\text{s}$		150		ns
Output Current Limit Blanking Time		150	250	380	ns
Output Frequency	RYC9114		65		kHz
	RYC9124		125		kHz
Output Frequency Dither			0		kHz
Minimum Duty Cycle			3.9	6	%
Maximum Duty Cycle		65	74	80	%
PWM Gain		0.06	0.09	0.15	%/mV
Input Dynamic Impedance		4.3	5.7	7.2	$\text{k}\Omega$

Note 3. Validated by design, not production tested.

FUNCTIONAL DESCRIPTION

The three-terminal RYC91XX series PWM controller includes a switch pin (SW), a feedback and bias pin (FB/BIAS) and ground pin (GND). The SW pin is an open-drain output with a current sensing circuit in its output path. The open-drain MOSFET is designed to carry the entire primary side peak and RMS currents for up to 5W line-voltage fed power supplies. The startup current source is also supplied through the switch terminal. The FB/BIAS pin accomplishes two functions: 1) Voltage feedback function. The output voltage is normally fed back to this pin through an op-to isolator. And 2) Bias supply function. The IC's bias power is received at this pin. These two functions are internally decoupled for independent performance.

The initial bias power is supplied through the P-Ch MOSFET, the resistor and the blocking diode as shown in the functional block diagram. As the FB/BIAS pin voltage reaches a startup threshold value, the PMOS is turned off and the IC starts to drive the HV transistor in a PWM manner. The initial IC bias voltage is supplied by the energy of the external capacitor on the FB/BIAS terminal until feedback energy is received from the auxiliary winding of the transformer.

APPLICATION INFORMATION

4W Constant Voltage Constant Current Cell-Phone Charger

A typical application schematic is shown above, using the RYC91XX with a BJT as the high voltage transistor. The power supply operates over a universal input range (85–265 VAC) and delivers 6V, 700mA current which is adequate to charge most single-cell Lithium-ion batteries.

The inductors L1 and L2, along with the capacitors C1 and C2, provide both common mode and differential mode attenuations for EMI. This filter along with the Y1 Capacitor C6 and the BJT slew control during switching transitions, ensures the power supply to meet the worldwide EMI standards with a 130 kHz switching frequency.

The high voltage BJT is driven with an emitter switched manner, hence the turn-off storage time is drastically reduced. Resistor R5 limits the base current during turn-on and during forward conduction. Zener diode ZR1 clamps the BJT bias as well as the auxiliary winding output of the transformer to 15V. During startup, a small base and collector current flow into the internal current source of RYC91XX and charge the capacitor C4. As the voltage at the FB/BIAS pin reaches the start threshold level (5.8V), the controller wakes up, performing PWM function and the internal current source is disconnected at the same time. The energy stored in C4 supplies the IC bias power until adequate energy has been transferred to the output and the auxiliary winding.

The error amplifier circuit of U3 provides a constant voltage output. The constant current output is accomplished by the voltage drop across the current sensing resistor R8. As the output current increases this voltage reaches the forward bias voltage of the LED of the op-to isolator, the output control is thus switched to a constant current mode.

Please refer to the appropriate application notes for more details of the application.

PACKAGE INFORMATION

Mechanical Dimensions

DIMENSION	MIN mm	MAX mm	MIN inch	MAX inch
A	4.45	5.08	0.175	0.2
B	4.45	5.08	0.175	0.2
C	3.45	3.68	0.135	0.145
D	12.7		0.5	
E	1.26	1.28	0.0498	0.0502
F	1.14	1.40	0.045	0.055
G	0.13	0.51	0.005	0.02

TO-92 PACKAGE NOTES:

1. Dimensions and tolerance per ANSI Y14.5M-1982.
2. Controlling dimensions: Millimeters
3. Dimensions do not include mold flash. Mold flash shall not exceed 0.15mm [0.006] per side.
4. Interlead flash shall not exceed 0.25 mm [0.010].

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
