Description

The SMV2026 series are silicon surface-mount, hyperabrupt tuning varactor diodes, excellent for use as high-Q tuning elements in an RF voltage controlled oscillator (VCO), voltage-controlled phase shifter, or tunable bandpass filter.

The minimum capacitance ratio from 2 V to 10 V is 2.0, which makes the SMV2026 series suitable for wide bandwidth VCOs and wide phase- range phase shifters.

The SMV2026 is manufactured in a surface-mount, industry-standard SC-79 package and an ultrasmall SOD-882 package that offer very low parasitic inductance and capacitance.

Table 1 describes the packages and markings of the SMV2026 series diodes.

Table 1. Packaging and Marking

	
Single	Single
SC-79 Green™	SOD-882 Green™
SMV2026-079LF Marking: Cathode and AE	SMV2026-040LF Marking: EC1
Ls = 0.70 nH	Ls = 0.45 nH

The Pb-free symbol or "LF" in the part number denotes a lead-free, RoHS-compliant package unless otherwise noted as Green™. Tin/lead (Sn/Pb) packaging is not recommended for new designs.

Electrical and Mechanical Specifications

The absolute maximum ratings for the SMV2026 series are provided in Table 2. Electrical specifications are provided in Table 3. Table 4 summarizes the typical capacitance for reverse voltages between 0 and 20 V.

Typical performance characteristics are illustrated in Figures 1 and 2. The SPICE model for the SMV2026 series of varactor diodes is shown in Figure 3 and the associated model parameters are provided in Table 5.

Package Dimensions

Package dimensions for the SMV2026 series are provided in Figure 4 (SC-79) and Figure 6 (SOD-882). Tape and reel dimensions are provided in Figure 5 (SC-79) and

Figure 7 (SOD-882). For the PCB layout footprint, refer to the Skyworks Application Note, *Suggested PCB Land Pattern Designs for Leaded and Leadless Packages, and Detailed Surface Mount Guidelines for Leadless Packages*, document number 200123.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

Note 1: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.
