ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings

(V_{SS} = 0V)

Parameter	Symbol	Condition		Rating	Unit
Power supply voltage 1	V_{DD}	Ta = +25°C		-0.3 to +6.5	V
Power supply voltage 2	V_{DDL}	Ta = +25°C		-0.3 to +2.0	V
Input voltage	V_{IN}	Ta = +25°C		-0.3 to V_{DD}+0.3*1	V
Output voltage1	V_{OUT1}	Ta = +25°C		-0.3 to V_{DD}+0.3*1	V
Output voltage2	V_{OUT2}	Ta = +25°C		-0.3 to +6.5	V
"H" level output current	I_{OUTH}	Ta = +25°C	1pin	-40*2	mA
			Total	-180*2	
"L" level output current	I_{OUTL}	Ta = +25°C	1pin	+40	mA
			Total	+180	
Power dissipation	PD	Ta = +25°C		1	W
Storage temperature	T_{STG}	—		-55 to +150	°C

*1 6.5V or lower
*2 The current flowing out the LSI through the pin is described in the negative number.
The applicable maximum current is the absolute value.
For example, -1mA means the maximum current 1mA flows out the LSI through the pin.

[Note]
Stresses above the absolute maximum ratings listed in the above table may cause permanent damage to the device.
These are stress ratings only and functional operation of the device at these conditions is not implied.

Thermal characteristics

The maximum chip-junction temperature, T_j max, may be calculated using the following equation.

$T_j \max = T_a \max + P_D \max \times \theta_{ja}$
T_a max: $maximum\ ambient\ temperature$
$P_D\ max$: LSI maximum power dissipation
θ_{ja}: $Package\ junction\ to\ ambient$ thermal resistance

Design a Mounting board by considering heat radiation such as power dissipation and ambient temperature to satisfy the recommended conditions.

The following table shows the each package's thermal resistance for thermal design reference estimated by simulation based on the PCB (printed circuit board) conditions define as a below.

Parameter	Symbol	Condition	Range			Unit
			Min.	Typ.	Max.	
Crystal oscillation frequency *1 *2	f_{XTL}	—	—	32.768	—	kHz
Crystal oscillation start time	T_{XTL}	—	—	—	2	s

*1: The oscillation frequency is determined by the oscillation circuit, crystal resonator and the external capacitance (C_{GL}/C_{DL}). As those parameters changes depending the crystal resonator, it requires evaluation on the actual PCB circuit for matching. Ask crystal resonator makers for matching and confirm the oscillation characteristics.

*2: The quality of oscillation characteristics might be lost, depending on material of PCB, condition of wiring capacitance or parasitic capacitance on the external circuits. Note for designing the external circuit.

- Make the wires on the external circuit as short as possible.
- Place the crystal resonator and oscillation circuit as close to the MCU as possible and make the wires between the external capacitance and crystal resonator as short as possible.
- Ensure no signal line flowing big current runs near the oscillation circuit.
- Ensure no signal line runs under and near the oscillation circuit.
- Make ground of external capacitance the same as MCU ground V_{SS} pin and connect them to the ground that has low variation of current and voltage.
  variation.
- The quality of oscillation characteristics might be lost depending on operating environment due to moisture absorption of PCB and condensation of PCB surface, recommended to have measures such as covering the oscillation circuit with resin.

*1 Sink-out current from V_{DD} to the output pin, which can guarantee the device operation.
*2 Sink-in current from the output pin to V_{SS}, which can guarantee the device operation.
*3 Do not beyond total current.
*4 The total current is on the condition of Duty≤50%(same applies to IOH1).
When the duty>50% the total current is calculated by following formula.
Total current = IOL3 x 50/n (When the duty is n%)
<For an example> When IOL3=100mA and n=80%,
Total current = IOL3 x 50/80 = 62.5mA
Current allowed per 1pin is independent of the duty and specified as IOL1 and IOL2.
Do not apply current larger than Absolute Maximum Ratings.
*5 The current flowing out the LSI through the pin is described in the negative number.
The applicable maximum current is the absolute value.
For example, -1mA means the maximum current 1mA flows out the LSI through the pin.
*6 These values are satisfied with VOH1, VOL1 and VOL2.
