

### General features

- Compliant to USB V2.0 for full-speed (12Mb/s) and low-speed (1.5Mbps) operation
- HBM =  $\pm 14\text{kV}$  on D+, D- lines;  $\pm 5\text{kV}$  on VBUS
- ESD Compliant to IEC-61000-4.2 (level 3) on D+, D- lines
- Separate I/O supply with operation down to 1.6V
- Integrated 3.3V output LDO
- Very low power consumption to meet USB 'suspend' current requirements
- Small QFN16 lead free package 3x3 mm<sup>2</sup>
- No power supply sequencing requirements
- Software controlled re-enumeration
- Integrated D+ pull-up resistor for FS operation

### Description

The STUSB03E is a single chip transceiver that complies with the physical layer specifications of the Universal Serial Bus (USB) v2.0 standard. It has an integrated 5V to 3.3V regulator which allows direct powering from the  $V_{\text{BUS}}$ . The transceiver has an integrated voltage detector to

detect the presence of the  $V_{\text{BUS}}$  voltage and features an internal D+ pull-up resistor implemented in accordance with the 27% resistor ECN.

The STUSB03E also supports Sharing mode when  $V_{\text{BUS}}$  is not present, which allows the D+/D- lines to be shared with other serial protocols.

It supports both full-speed (12Mbps) and low-speed (1.5Mbps) operation. It is also designed to operate down to 1.6V so that it is compatible with lower system voltages of most portable systems, which include PDAs, MP3 Player and Cell phones.

## 2 Pin configuration

Figure 2. Pin connections (Top View)

Table 1. Pin description

Pin N°	Symbol	I/O	Name and function
1	SPD	I	Speed selection input. A logic HIGH operates at edge rates for “fullspeed” operation. A logic LOW operates edge rates for “lowspeed” operation. See also CON pin.
2	RCV	O	Receive Data. Output for USB differential data. (see <a href="#">Table 2</a> )
3	VP	I/O	If OE# = H, VP = Receiver output (+) If OE# = L, VP = Driver input (+) (see <a href="#">Table 2</a> )
4	VM	I/O	If OE# = H, VM = Receiver output (-) If OE# = L, VM = Driver input (-) (see <a href="#">Table 2</a> )
5	CON	I	CONNECT (input). Connects the internal pull-up resistor to D+ if SPD and RSEL are logic high. Controls status of V <sub>PU</sub> pin if SPD or RSEL is logic low.
6	GND		Ground reference
7	SUS	I	Suspend (active-high). Turns off internal circuits to reduce supply current.
8	RSEL	I	Full speed pull-up resistor selection input. If RSEL = 0 the internal pull-up resistor connected to D+ is disabled and an external resistor connected to V <sub>PU</sub> pin must be used.
9	OE#	I	Output Enable (active-low). Enables transceiver data transmission onto the bus. When not active, the transceiver is in the receive mode. (see <a href="#">Table 2</a> )
10, 11	D-, D+	I/O	Differential data lines that conform to the USB v2.0 standard. (see <a href="#">Table 2</a> )
12	VTRM	O	3.3V Reference Supply Output. Requires a 1.0μF decoupling capacitor for stability.
13	V <sub>PU</sub>	O	Pull-up Supply Voltage Output. Used to connect 1.5K pull-up speed detect resistor when RSEL or SPD is logic low. If CON = 0, V <sub>PU</sub> is high impedance. If CON = 1, V <sub>PU</sub> = 3.3V ±10% (see <a href="#">Table 4</a> ).
14	V <sub>BUS</sub>	I	USB Bus Supply Voltage (4V to 5.5V). Supplies power to the USB transceiver and internal circuitry.
15	V <sub>IF</sub>	I	System Interface Supply Voltage (1.6V to 3.6V). Provides reference supply voltage for system I/O interface signals.
16	V <sub>BUSDET</sub>	O	V <sub>BUS</sub> indicator output. When V <sub>BUS</sub> > 4.0V, V <sub>BUSDET</sub> = High; when < 3.6V, V <sub>BUSDET</sub> = Low (V <sub>IF</sub> referred).
EXP	N.C.		Not connected.

### 3 Functional tables

**Table 2. Function selection**

SUS	OE#	D+, D-	RCV	VP/VM	Function
L	L	Driving	Active	Active	Normal transmit mode
L	H	Receiving	Active	Active	Normal receive mode
H	L	Hi-Z	L	Not Active	Low power state
H	H	Hi-Z	L	Active	Receiving during suspend (low power state) <sup>(1)</sup>

(1) During suspend VP and VM are active in order to detect out of band signalling conditions

**Table 3. Sharing mode pin configuration**

Input/output	Status
V <sub>BUS</sub>	Floating or connected to GND
V <sub>IF</sub>	1.6V to 3.6V input
D+, D-, VP, VM	High impedance
RCV	High
SPD	Low
SPD	High impedance
V <sub>BUSDET</sub>	Low
V <sub>PU</sub>	High impedance
#OE, SUS, CON	High impedance inputs

**Table 4. V<sub>PU</sub> Status**

SPD	RSEL	CON	V <sub>PU</sub>
H	H	X	High impedance
H	L	L	High impedance
H	L	H	3.3V ± 10%
L	X	L	High impedance
L	X	H	3.3V ± 10%

**Table 5. Truth table during normal Mode**

OE# = L						
Input		Output			Result	
VP	VM	D+	D-	RCV		
L	L	L	L	X	SE0	
L	H	L	H	L	Logic Low	
H	L	H	L	H	Logic High	
H	H	X	X	X	Undefined	
OE# = H						
Input		Output			RESULT	
D+	D-	VP	VM	RCV		
L	L	L	L	X	SE0	
L	H	L	H	L	Logic Low	
H	L	H	L	H	Logic High	
H	H	X	X	X	Undefined	

X = Undefined

## 4 Maximum ratings

**Table 6. Absolute maximum ratings**

Symbol	Parameter	Value	Unit
$V_{BUS}$	Supply Voltage	6	V
$V+$	All other Inputs	-0.5 to 4.6	V
$I_O$	Output Current (D+, D-)	$\pm 50$	mA
$I_O$	Output Current (all others)	$\pm 15$	mA
$I_I$	Input Current	$\pm 50$	mA
ESD	D+, D-, HBM (Note 3)	$\pm 14$	kV
	$V_{BUS}$ (Note 3)	$\pm 5$	
	All other pins (Note 3)	$\pm 2$	
$T_{STG}$	Storage Temperature Range	-65 to + 150	$^{\circ}\text{C}$
$T_{OPR}$	Operating Temperature Range	-40 to + 85	$^{\circ}\text{C}$

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional Operation under these conditions is not implied.

Note 3. Devices are ESD sensitive. Handling precautions recommended. Human body model, 1.5k in series with 100pF.

**Table 7. Thermal data**

Symbol	Parameter	Value	Unit
$R_{thJA}$	Thermal Resistance Junction-Ambient	59	$^{\circ}\text{C}/\text{W}$

## 5 Electrical characteristics

## 8 Functional description

The STUSB03E is designed to provide USB connectivity in mobile systems where available system supply voltages are not able to satisfy USB requirements. The STUSB03E can operate down to supply voltages of 1.6V and still meet USB physical layer specifications. As shown in the circuit above, the STUSB03E takes advantage of the USB supply voltage,  $V_{BUS}$ , to operate the transceiver. The system voltage,  $V_{IF}$  is used to set the reference voltage used by the digital I/O lines interfacing to the system controller. Internal circuitry provides translation between the USB and system voltage domains.  $V_{IF}$  will typically be the main supply voltage rail for the controller.

In addition, a 3.3V, 10% termination supply voltage,  $V_{PU}$ , is provided to support speed selection.  $V_{PU}$  can be disabled or enabled under software control via the CON input. This allows for software-controlled connect or disconnect states. A 1.5K resistor is required to be connected between this pin and the D- line when operating in low speed mode. In full speed mode either an internal pull-up resistor or an external one connected between  $V_{PU}$  pin and D+ line can be used; the desired configuration is chosen by tying  $R_{SEL}$  pin to  $V_{IF}$  or GND.

The use of ESD transient protection devices is not required for operation, but is recommended.

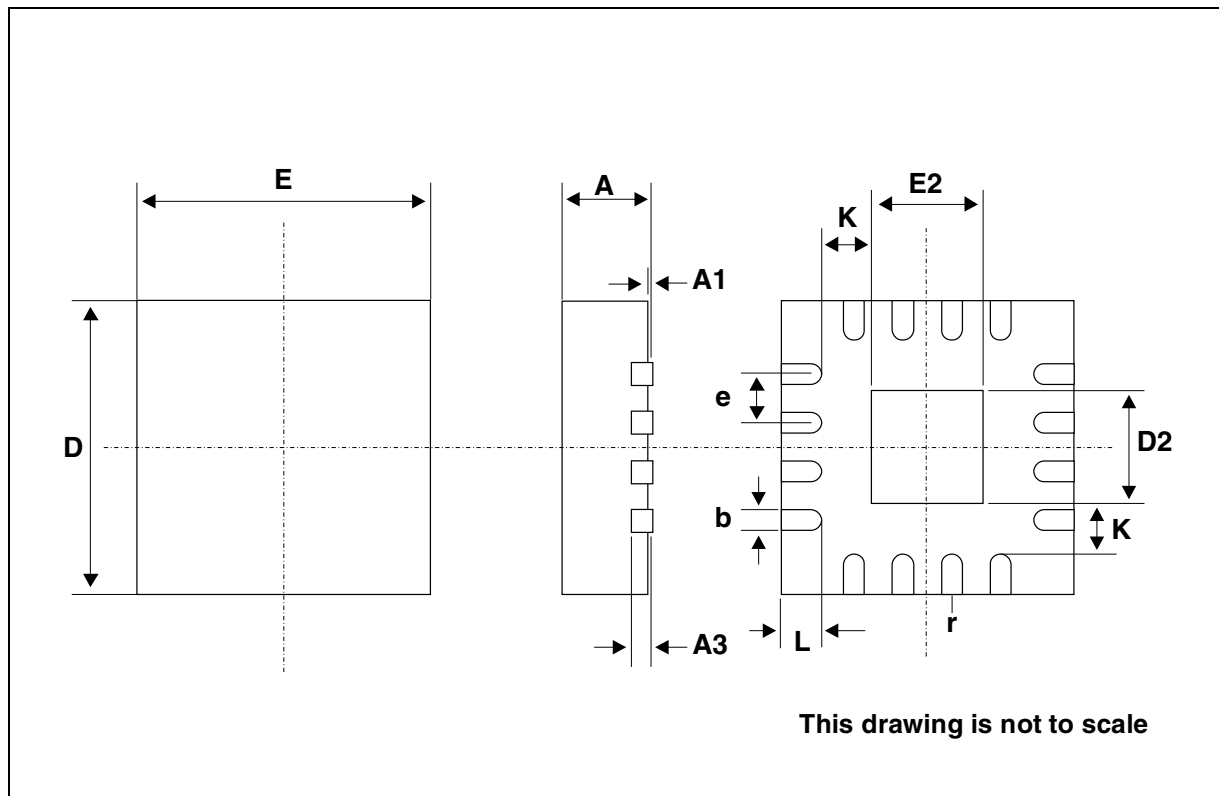

## 9 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
