## 3.3V / 2.5V / 1.8V / 1.5V 3:1:10 LVCMOS Fanout Buffer

### Description

The NB3F8L3010C is a 3:1:10 Clock / Data fanout buffer operating on a 3.3 V / 2.5 V Core  $V_{DD}$  and two flexible 3.3 V / 2.5 V / 1.8 V / 1.5 V  $V_{DDO_n}$  supplies which must be equal or less than  $V_{DD}$ .

A Mux selects between a Crystal input, or either of two differential/SE Clock / Data inputs. Differential Inputs accept LVPECL, LVDS, HCSL, or SSTL and Single-Ended levels. The MUX control lines, SEL0 and SEL1, select CLK0/ $\overline{\text{CLK0}}$ , CLK1/ $\overline{\text{CLK1}}$ , or Crystal input pins per Table 3. The Crystal input is disabled when a Clock input is selected. Output enable pin, OE, synchronously forces a High Impedance state (HZ) when Low per Table 4.

Outputs consist of 10 single-ended LVCMOS outputs.

### Features

- Ten CMOS / LVTTTL Outputs up to 200 MHz
- Differential Inputs Accept LVPECL, LVDS, HCSL, or SSTL
- Crystal Oscillator Interface
- Crystal Input Frequency Range: 10 MHz to 50 MHz
- Output Skew: 10 ps Typical
- Additive RMS Phase Jitter @ 125 MHz, (12 kHz – 20 MHz): 0.03 ps (Typical)
- Synchronous Output Enable
- Output Defined Level When Input is Floating
- Power Supply Modes:
  - ◆ Single 3.3 V
  - ◆ Single 2.5 V
  - ◆ Mixed 3.3 V  $\pm$  5% Core/2.5 V  $\pm$  5% Output Operating Supply
  - ◆ Mixed 3.3 V  $\pm$  5% Core/1.8 V  $\pm$  0.2 V Output Operating Supply
  - ◆ Mixed 3.3 V  $\pm$  5% Core/1.5 V  $\pm$  0.15 V Output Operating Supply
  - ◆ Mixed 2.5 V  $\pm$  5% Core/ 1.8 V  $\pm$  0.2 V Output Operating Supply
  - ◆ Mixed 2.5 V  $\pm$  5% Core /1.5 V  $\pm$  0.15 V Output Operating Supply
- Two Separate Output Bank Power Supplies
- Industrial temp. range -40°C to 85°C
- These are Pb-Free Devices

### Applications

- Clock Distribution
- Networking and Communications
- High End Computing
- Wireless and Wired Infrastructure

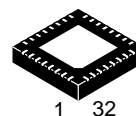

### End Products

- Servers
- Ethernet Switch/Routers
- ATE
- Test and Measurement

Table 1. PIN DESCRIPTION

Number	Name	Type	Input Default	Description
1, 3, 5, 7, 8	Q0, Q1, Q2, Q3, Q4	LVC MOS		Outputs – Bank A
17, 18, 20, 22, 24	Q5, Q6, Q7, Q8, Q9	LVC MOS		Outputs – Bank B
2, 6	VDDOA	Power		Positive Supply Pins for Bank A Outputs Q0 – Q4
19, 23	VDDOB	Power		Positive Supply Pins for Bank B Outputs Q5 – Q9
4, 9, 15, 16, 21, 25, 26, 32	GND	GND		Ground Supply
10	VDD	Power		V <sub>DD</sub> Positive Supply pin for Core and Inputs.
11	XTAL_IN	XTAL OSC / CLK Input		Crystal Oscillator Interface or External Clock Source at LVC MOS Levels
12	XTAL_OUT	XTAL OSC Output		Crystal Oscillator Interface
13	CLK0	Diff / SE Input	Pulldown	Non-inverting clock/data input 0.
14	$\overline{\text{CLK0}}$	Diff / SE Input	Pullup / Pulldown	Inverting differential clock input 0.
27	$\overline{\text{CLK1}}$	Diff / SE Input	Pullup / Pulldown	Inverting differential clock input 1
28	CLK1	Diff / SE Input	Pulldown	Non-inverting clock/data input 1
29	SEL1	LVC MOS / LV TTL Input	Pulldown	Input clock select. See Table 3 for function. Input Pulldown
30	SEL0	LVC MOS / LV TTL Input	Pulldown	Input clock select. See Table 3 for function. Input Pulldown
31	OE	LVC MOS / LV TTL Input	Pulldown	Output Enable Control. See Table 4 for function.
–	EP	–		The Exposed Pad (EP) on the QFN–32 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat–sinking conduit. The pad is electrically connected to the die, and must be electrically connected to GND.

1. All VDD, VDDO<sub>n</sub> and GND pins must be externally connected to a power supply to guarantee proper operation. Bypass each V<sub>DD</sub> and VDDO<sub>n</sub> with 0.01  $\mu$ F CAP to GND.

Table 2. PIN CHARACTERISTICS

Symbol	Parameter	Min	Typ	Max	Unit
C <sub>IN</sub>	Input Capacitance		4		pF

5. XTAL\_IN can be overdriven relative to a signal a crystal would provide.

6. Defined as skew between outputs at the same supply voltage and with equal load conditions. Measured at  $V_{DDO_n}/2$ .

7. This parameter is defined in accordance with JEDEC Standard 65.

8. See phase noise plot.

9. These parameters are guaranteed by characterization. Not tested in production. See Parameter Measurement Information

## APPLICATION INFORMATION

### Recommendations for Unused LVCMOS Output Pins

#### Inputs:

##### CLK/CLK Inputs

For applications not requiring the use of the differential input, both CLK and  $\overline{\text{CLK}}$  can be left floating. Though not required, but for additional protection, a 1 k $\Omega$  resistor can be tied from CLK to ground.

##### Crystal Inputs

For applications not requiring the use of the crystal oscillator input, both XTAL\_IN and XTAL\_OUT can be left floating. Though not required, but for additional protection, a 1 k $\Omega$  resistor can be tied from XTAL\_IN to ground.

##### LVCMOS Outputs

A 33  $\Omega$  series terminating resistor may be used on each clock output if the trace is longer than 1 inch.

### LVCMOS Control Pins

All control pins have internal pulldowns; additional resistance is not required but can be added for additional protection. A 1 k $\Omega$  resistor can be used.

### Power Supplies

**VDD** is the power supply for the core and input circuitry.

**VDDOA** and **VDDOB** are two separate positive power supplies for two banks of outputs:

VDDOA pins 2 and 6 are connected internally for outputs Q0 – Q4.

VDDOB pins 19 and 23 are connected internally for outputs Q5 – Q9.

### Differential Input with Single-Ended Interconnect

Refer to Figure 5 to interconnect a single-ended to a Differential Pair of inputs. The reference bias voltage  $V_{REF} = V_{DD}/2$  is generated by the resistor divider of R3 and R4. Bypass capacitor (C1) can filter noise on the DC bias. This bias circuit should be located as close to the input pin as possible. Adjust R1 and R2 to common mode voltage of the signal input swing to preserve duty cycle.

This configuration requires that the sum of the output impedance of the driver ( $R_o$ ) and the series resistance ( $R_s$ ) equals the transmission line impedance. In addition, matched termination by R1 and R2 will attenuate the signal

amplitude in half. Termination may be done by using  $R_s$  or by using R1 and R2. First,  $R_s = 0$  and then R3 and R4 in parallel should equal the transmission line impedance. For most 50  $\Omega$  applications, R1 and R2 can be 100  $\Omega$ . The differential input can handle full rail LVC MOS signaling, but it is recommended that the amplitude be reduced. The datasheet specifies a differential amplitude which needs to be doubled for a single ended equivalent stimulus.  $V_{ILmin}$  cannot be less than  $-0.3$  V and  $V_{IHmax}$  cannot be more than  $V_{DD} + 0.3$  V. The datasheet specifications are characterized and guaranteed by using a differential signal.

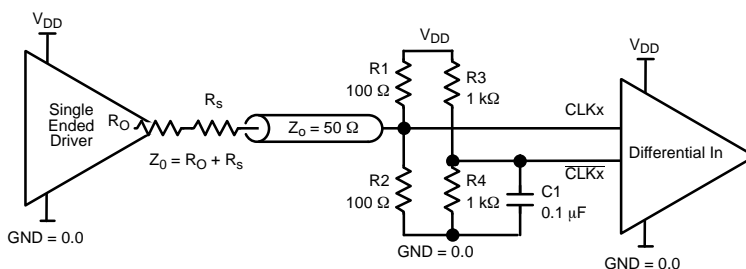

Figure 5. Differential Input with Single-ended Interconnect

### Crystal Input Interface

The device has been characterized with 18 pF parallel resonant crystals. The capacitor values, C1 and C2, shown in Figure 6 below as 15 pF were determined using an 18 pF parallel resonant crystal and were chosen to minimize the ppm error. The optimum C1 and C2 values can be slightly adjusted for different board layouts.

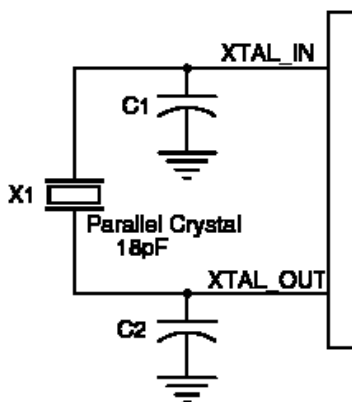

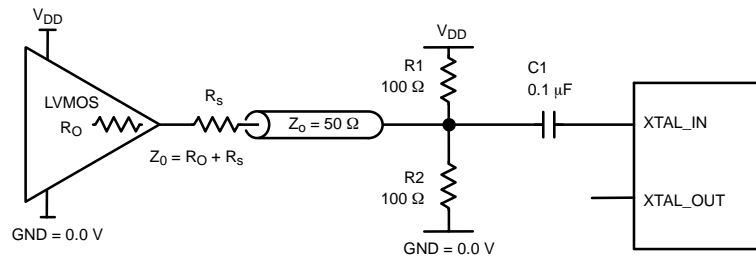

Figure 6. Crystal Input Interface

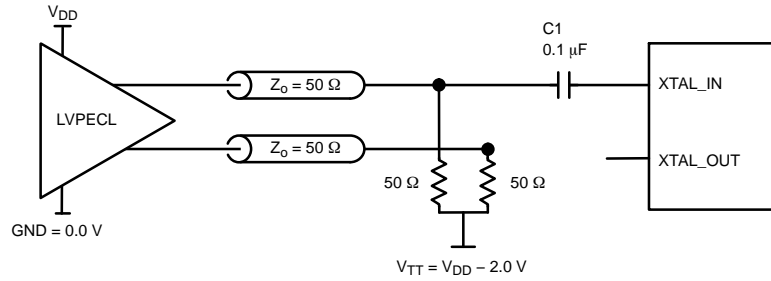

### CLOCK Overdriving the XTAL Interface

The XTAL\_IN input can accept a single-ended LVC MOS signal through an AC coupling capacitor. A general LVC MOS interface diagram is shown in Figure 7 and a general LVPECL interface in Figure 8. The XTAL\_OUT pin must be left floating. The maximum amplitude of the input signal should not exceed 2 V and the input edge rate can be as slow as 10 ns. This configuration requires that the output impedance of the driver ( $R_o$ ) plus the series resistance ( $R_s$ ) equals the transmission line impedance. In addition, matched termination at the crystal input will attenuate the signal in half. This can be done in one of two ways. First, R1 and R2 in parallel should equal the transmission line impedance. For most 50  $\Omega$  applications, R1 and R2 can be 100  $\Omega$ . This can also be accomplished by removing R1 and making R2 50  $\Omega$ . By overdriving the crystal oscillator, the device will be functional, but note, the device performance is guaranteed by using a quartz crystal.

**Figure 7. General Diagram for LVC MOS Driver to XTAL Input Interface Use  $R_S$  or  $R1 / R2$**

**Figure 8. General Diagram for LVPECL Driver to XTAL Input Interface**

### Differential Clock Input Interface

The CLK /  $\overline{\text{CLK}}$  accept LVDS, LVPECL, SSTL, HCSL differential signals. Signals must meet the  $V_{PP}$  and  $V_{CMR}$  input requirements. Figures 9 to 13 show interface examples for the CLK /  $\overline{\text{CLK}}$  input with built-in 50  $\Omega$  terminations driven by the most common driver types. The

input interfaces suggested here are examples only. If the driver is from another vendor, use their termination recommendation. Please consult with the vendor of the driver component to confirm the driver termination requirements.

### VFQFN EPAD Thermal Release Path

In order to maximize both the removal of heat from the package and the electrical performance, a land pattern must be incorporated on the Printed Circuit Board (PCB) within the footprint of the package corresponding to the exposed metal pad or exposed heat slug on the package, as shown in Figure 14. The solderable area on the PCB, as defined by the solder mask, should be at least the same size/shape as the exposed pad/slug area on the package to maximize the thermal/electrical performance. Sufficient clearance should be designed on the PCB between the outer edges of the land pattern and the inner edges of pad pattern for the leads to avoid any shorts. While the land pattern on the PCB provides a means of heat transfer and electrical grounding from the package to the board through a solder joint, thermal vias are necessary to effectively conduct from the surface of the PCB to the ground plane(s). The land pattern must be connected

to ground through these vias. The vias act as “heat pipes”. The number of vias (i.e. “heat pipes”) is application specific and dependent upon the package power dissipation as well as electrical conductivity requirements. Thus, thermal and electrical analysis and/or testing are recommended to determine the minimum number needed. Maximum thermal and electrical performance is achieved when an array of vias is incorporated in the land pattern. It is recommended to use as many vias connected to ground as possible. It is also recommended that the via diameter should be 12 to 13 mils (0.30 to 0.33 mm) with 1 oz copper via barrel plating. This is desirable to avoid any solder wicking inside the via during the soldering process which may result in voids in solder between the exposed pad/slug and the thermal land. Precautions should be taken to eliminate any solder voids between the exposed heat slug and the land pattern. Note: These recommendations are to be used as a guideline only.

### RECOMMENDED SOLDERING FOOTPRINT\*

DIMENSION: MILLIMETERS

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

ON Semiconductor and  are registered trademarks of Semiconductor Components Industries, LLC (SCILLC). SCILLC owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of SCILLC's product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marking.pdf](http://www.onsemi.com/site/pdf/Patent-Marking.pdf). SCILLC reserves the right to make changes without further notice to any products herein. SCILLC makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does SCILLC assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. "Typical" parameters which may be provided in SCILLC data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. SCILLC does not convey any license under its patent rights nor the rights of others. SCILLC products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the SCILLC product could create a situation where personal injury or death may occur. Should Buyer purchase or use SCILLC products for any such unintended or unauthorized application, Buyer shall indemnify and hold SCILLC and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that SCILLC was negligent regarding the design or manufacture of the part. SCILLC is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
