

MAX17523 Evaluation Kit

Evaluates: MAX17523

General Description

The MAX17523 evaluation kit (EV kit) is a fully assembled and tested circuit board that demonstrates the MAX17523 adjustable overcurrent and overvoltage protector. The EV kit features TVS diode on input and Schottky diode on output. Input power to the EV kit uses a 4.5V to 36V input supply.

The EV kit circuit can be configured to demonstrate the device's different current-limit types, adjustable overvoltage, undervoltage, and current-limit threshold.

Features

- 4.5V to 36V Operating Voltage Range
- Features TVS Diode and Schottky Diode
- Evaluates Three Current-Limit Types, Current-Limit Threshold, OVLO, and UVLO
- Proven PCB Layout
- Fully Assembled and Tested

Ordering Information appears at end of data sheet.

Quick Start

Required Equipment

- MAX17523 EV kit
- 36V DC power supply
- Multimeter
- USB-A male to USB-B male cable or 5V DC power supply

Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation:

- 1) Verify that all jumpers are in their default positions.
- 2) Connect the USB cable to J1 from a computer or connect a 5V DC power supply to TP3.
- 3) Verify that LED1 is on.
- 4) Connect a 20V DC power supply to IN. Verify that OUT is 20V.
- 5) Increase voltage on the DC power supply and verify that the OUT voltage goes down and FLAG goes low when input reaches approximately 33V.
- 6) Decrease voltage on the DC power supply and verify that OUT goes back and FLAG goes high when the input reaches approximately 32V.

Detailed Description of Hardware

The MAX17523 EV kit is a fully assembled and tested circuit board that demonstrates the MAX17523 1A adjustable overcurrent and overvoltage protector IC in a 16-pin surface-mount TQFN-EP package.

Using jumper JU1, the EV kit circuit can be configured to evaluate different current-limit thresholds with a different resistor on SETI. Using jumpers JU3–JU5, the EV kit circuit can be configured to evaluate the internal OVLO/UVLO threshold or external threshold using a resistor-divider. Using jumpers JU14 and JU15, the EV kit circuit can be configured to evaluate different current-limit types (autoretry, latching, and continuous). The EV kit also features an LED to indicate the power for logic pins.

Table 1. LED Indicator

| LED | NAME | DESCRIPTION |
|------|-------|---|
| LED1 | POWER | LED1 is on when the V _{BUS} /5V supply for the logic pins is powered |

Current-Limit Threshold

The EV kit features a jumper (JU1) to select current-limit threshold. Install a jumper as shown in [Table 2](#) to change the current-limit threshold.

Use the following equation to calculate the current limit:

$$R_{SETI} (k\Omega) = \frac{6100}{I_{LIM} (mA)}$$

UVLO/OVLO Threshold

Use jumpers JU3–JU5 to select UVLO and OVLO threshold. See [Table 3](#) for jumper settings.

Switch Control

The EV kit features two jumpers (JU6, JU8) to enable or disable the switch. See [Table 4](#) for jumper settings and [Table 5](#) for switch status.

Table 2. Current-Limit Threshold (JU1)

| JUMPER | SHUNT POSITION | DESCRIPTION |
|--------|----------------|--------------------------|
| JU1 | 1-2* | Current limit 0.15A |
| | 3-4 | Current limit 0.5A |
| | 5-6 | Current limit 0.98A |
| | 7-8 | Current limit adjustable |

*Default position.

Table 3. UVLO/OVLO Threshold (JU3–JU5)

| JUMPER | SHUNT POSITION | DESCRIPTION |
|--------|----------------|--|
| JU3 | Installed* | UVLO connected to ground. Internal UVLO threshold is selected. |
| | Not installed | UVLO not connected to ground. Install JU5 to use external resistors to set UVLO threshold. |
| JU4 | Installed* | OVLO connected to ground. Internal OVLO threshold is selected. |
| | Not installed | OVLO not connected to ground. Install JU5 to use external resistors to set OVLO threshold. |
| JU5 | Installed | Use external resistors to set the OVLO/UVLO threshold. |
| | Not installed* | Not using external resistors to set the OVLO/UVLO threshold. |

*Default position.

Table 4. Switch Control (JU6, JU8)

| JUMPER | SHUNT POSITION | DESCRIPTION |
|--------|----------------|---------------------------------------|
| JU6 | 1-2 | HVEN connected to IN through 100kΩ. |
| | 2-3* | HVEN connected to ground. |
| JU8 | Installed* | EN connected to VBUS. |
| | Not installed | EN connected to ground through 100kΩ. |

*Default position.

Table 5. Enable Inputs

| HVEN | EN | SWITCH STATUS |
|------|----|---------------|
| 0 | 0 | On |
| 0 | 1 | On |
| 1 | 0 | Off |
| 1 | 1 | On |

Reverse-Current Block Enable

Use jumper JU9 to enable or disable the reverse-current flow protection. The reverse-current block is enabled when $\overline{\text{RIEN}}$ is logic-low. See [Table 6](#) for jumper settings.

Current-Limit Type Select

The EV kit features jumpers JU12, JU14, JU15 to select different current-limit type and sampled time. See [Table 7](#) for jumper settings.

Table 6. Reverse-Current Block Enable (JU9)

| JUMPER | SHUNT POSITION | DESCRIPTION |
|--------|----------------|--|
| JU9 | Installed | $\overline{\text{RIEN}}$ connected to VBUS. |
| | Not installed* | $\overline{\text{RIEN}}$ connected to ground through 100k Ω . |

*Default position.

Table 7. Current-Limit Type Select (JU12, JU14, JU15)

| JUMPER | SHUNT POSITION | DESCRIPTION |
|--------|----------------|---|
| JU12 | 1-2* | CLTS_MODE high. CLTS1 and CLTS2 are sampled continuously. |
| | 2-3 | CLTS_MODE low. CLTS1 and CLTS2 are sampled only when $V_{\text{IN}} - V_{\text{OUT}} < 0.6\text{V}$. |
| JU14 | 1-2* | CLTS1 high. |
| | 2-3 | CLTS1 low. |
| JU15 | 1-2 | CLTS2 high. |
| | 2-3* | CLTS2 low. |

*Default position.

Output Load Capacitor

Use jumper JU13 to connect output to 330 μF capacitor. See [Table 9](#) for jumper settings.

Table 8. Logic Inputs

| CLTS2 | CLTS1 | CURRENT-LIMIT TYPE |
|-------|-------|--------------------|
| 0 | 0 | Latchoff |
| 0 | 1 | Autoretry |
| 1 | 0 | Continuous |
| 1 | 1 | Continuous |

Table 9. Output Load Capacitor (JU13)

| JUMPER | SHUNT POSITION | DESCRIPTION |
|--------|----------------|---------------------------------|
| JU13 | Installed | OUT connected to C7 and C8. |
| | Not installed* | OUT not connected to C7 and C8. |

*Default position.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
