1. Introduction

The GW.05.0E23 dual band WiFi Hinged Rotatable Fakra Mount Antenna is a high efficiency monopole antenna for Wi-Fi, WLAN, Zigbee, Bluetooth, and 802.11a/b/g/n/ac applications. The direct mount Fakra connector enables a more robust mating to the device compared to a SMA, the locking feature prevents the antenna coming loose due to vibration or shock.

This small antenna fits in places other antennas cannot since the radiating element can be moved and rotated in one hemisphere. For optimized efficiency, keep the element as far away from metal as possible.

Like all monopole antennas, the GW.05 works best when connected directly to the ground-plane of the device main PCB or to the outside of a metal housing. However, it maintains excellent performance even without a ground plane (>50%), making it the best all-around small WiFi terminal antenna on the market. Even compared with other much larger antennas, the GW.05 offers superior high-efficiency wide-band characteristics.

GW.05 is also available as a standard SMA(M) version.
