

Features

- High efficiency and excellent thermal performance
- No minimum load requirement
- Protection against input under-voltage, output over-voltage/over-current/short circuit, and over-temperature.
- Output remote sense
- Fixed frequency operation
- 2,250Vdc input to output isolation
- Encapsulated for harsh environment
- Flanged baseplate available
- Different temperature grades available
- Designed to meet IEC60950-1 2nd edition
- Qualification/Screening satisfy: IPC-9592, MIL-STD-810, MIL-STD-883

Absolute Maximum Ratings

Excessive stresses over these absolute maximum ratings can cause damage to the converter. Operation should be limited to the conditions outlined under the Electrical Specifications.

Parameter	Symbol	Min	Max	Unit
Input Voltage (continuous)	V _i	-0.5	40	Vdc
Input Voltage (< 100ms, operating)	V _i	-	50	Vdc
Input Voltage (continuous, non-operating)	V _i	-	50	Vdc
Storage Temperature	T _{stg}	-55	125	°C

External Load Capacitance	-	-	-	700	μF

Feature Descriptions

ON/OFF

The converter can be turned on and off by changing the voltage between the ON/OFF pin and $V_{in}(-)$. The SYRS1 Series of converters are available with positive logic and negative logic.

For the negative control logic, the converter is ON when the ON/OFF pin is at a logic low level and OFF when the ON/OFF pin is at a logic high level. For the positive control logic, the converter is ON when the ON/OFF pin is at a logic high level and OFF when the ON/OFF pin is at a logic low level.

With the internal pull-up circuitry, a simple external switch between the ON/OFF pin and $V_{in}(-)$ can control the converter.

The logic low level is from 0V to 1.2V and the maximum sink current during logic low is 1mA. The external switch must be capable of maintaining a logic-low level while sinking up to this current. The logic high level is from 3.5V to 15V. The converter has an internal pull-up

circuit that ensures the ON/OFF pin at a high logic level when the leakage current at ON/OFF pin is no greater than 50 μ A.

Remote SENSE

The remote SENSE pins are used to sense the voltage at the load point to accurately regulate the load voltage and eliminate the impact of the voltage drop in the power distribution path.

SENSE(+) and SENSE(-) pins should be connected between the points where voltage regulation is desired. The voltage between the SENSE pins and the output pins must not exceed the smaller of 0.5V or 10% of typical output voltage.

$$[V_{out}(+) - V_{out}(-)] - [SENSE(+) - SENSE(-)] < \min\{0.5V, 10\%V_o\}$$

When remote sense is not used, the SENSE pins should be connected to their corresponding output pins. If the SENSE pins are left floating, the converter will deliver an output voltage slightly higher than its specified typical output voltage.

Output Voltage Adjustment (Trim)

The trim pin allows the user to adjust the output voltage set point. To increase the output voltage, an external resistor is connected between the TRIM pin and SENSE(+). To decrease the output voltage, an external resistor is connected between the TRIM pin and SENSE(-). The output voltage trim range is 80% to 110% of the specified typical output voltage. The circuit configuration for trim down operation is shown in Figure 1.

To decrease the output voltage, the value of the external resistor should be.

$$R_{down} = \left(\frac{511}{\Delta} - 10.22 \right) (k\Omega)$$

Where

$$\Delta = \left(\frac{|V_{nom} - V_{adj}|}{V_{nom}} \right) \times 100$$

and

V_{nom} = Typical Output Voltage

V_{adj} = Adjusted Voltage

The circuit configuration for trim up operation is shown in Figure 2. To increase the output voltage, the value of the resistor should be:

$$R_{up} = \left(\frac{5.11V_o(100 + \Delta)}{1.225\Delta} - \frac{511}{\Delta} - 10.22 \right) (k\Omega)$$

Where

V_o = Typical Output Voltage

Figure 1. Circuit to Decrease Output Voltage

Figure 2. Circuit to Increase Output Voltage

Output Over-Current Protection (OCP)

This converter can be ordered in either latch-off or auto-restart version upon OCP, OVP, and OTP.

With the latch-off version, the converter will latch off when the load current exceeds the limit. The converter can be restarted by toggling the ON/OFF switch or recycling the input voltage.

With the auto-restart version, the converter will operate in a hiccup mode (repeatedly try to restart) until the cause of the over-current condition is cleared.

Output Over-Voltage Protection (OVP)

With the latch-off version, the converter will latch off when the output voltage exceeds the limit. The converter can be restarted by toggling the ON/OFF switch or recycling the input voltage.

With the auto-restart version, the converter will operate in a hiccup mode (repeatedly try to restart) until the cause of the over-voltage condition is cleared.

Over Temperature Protection (OTP)

With the latch-off version, the converter will shut down and latch off if an over-temperature condition is detected. The converter has a temperature sensor located at a carefully selected position in the converter circuit board, which represents the thermal condition of key components of the converter. The thermal shutdown circuit is designed to turn the converter off when the temperature at the sensor reaches 120°C. The module can be restarted by toggling the ON/OFF switch or recycling the input voltage.

With the auto-restart version, the converter will resume operation after the converter cools down.

Design Considerations

As with any DC/DC converter, the stability of the SYRS1 converters may be compromised if the source impedance is too high or inductive. It's desirable to keep the input source ac-impedance as low as possible. Although the converters are designed to be stable without adding external input capacitors for typical

source impedance, it is recommended to add 220 μ F low ESR electrolytic capacitors at the input of the converter for each 100W output power, which reduces the potential negative impact of the source impedance on the converter stability. These electrolytic capacitors should have sufficient RMS current rating over the operating temperature range.

The converter is designed to be stable without additional output capacitors. To further reduce the output voltage ripple or improve the transient response, additional output capacitors are often used in applications. When additional output capacitors are used, a combination of ceramic capacitors and tantalum/polymer capacitors shall be used to provide good filtering while assuring the stability of the converter.

Mechanical Information

Potted, metal case

Potted, metal shield, flange

SYRS1 Series 9 – 36V Input Sixteenth Brick Converters

Potted, baseplate

Potted, flange

Pin	Name	Function
1	Vin(+)	Positive input
2	ON/OFF	Remote control
3	Vin(-)	Negative input
4	Vout(-)	Negative output
5	SENSE(-)	Negative remote sense
6	TRIM	Output voltage adjust
7	SENSE(+)	Positive remote sense
8	Vout(+)	Positive output

Notes:

- 1) All dimensions in mm (inches)
Tolerances: $x \pm .5$ ($.xx \pm 0.02$)
 $.xx \pm .25$ ($.xxx \pm 0.010$)
- 2) Input and function pins are 1.02mm (0.040") dia. with ± 0.10 mm (0.004") tolerance; the standoff shoulders are 2.00mm (0.078") dia. with ± 0.15 mm (0.006") tolerance.
- 3) Output pins are 1.57 mm (0.062") dia. with ± 0.10 mm (0.004") tolerance; the standoff shoulders are 2.46mm (0.097") dia. with ± 0.15 mm (0.006") tolerance.
- 4) All pins are coated with 90%/10% solder, Gold, or Matte Tin finish with Nickel underplating.
- 5) Workmanship meets or exceeds IPC-A-610 Class II
- 6) Baseplate flatness tolerance is 0.10mm (0.004") TIR for surface

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
