

## Single channel high side driver for automotive applications

### Features

|                                   |            |                 |
|-----------------------------------|------------|-----------------|
| Max supply voltage                | $V_{CC}$   | 41V             |
| Operating voltage range           | $V_{CC}$   | 4.5 to 28V      |
| Max on-state resistance (per ch.) | $R_{ON}$   | 50 m $\Omega$   |
| Current limitation (typ)          | $I_{LIMH}$ | 27A             |
| Off state supply current          | $I_S$      | 2 $\mu A^{(1)}$ |

1. Typical value with all loads connected.

- General
  - Inrush current active management by power limitation
  - Very low stand-by current
  - 3.0V CMOS compatible inputs
  - Optimized electromagnetic emissions
  - Very low electromagnetic susceptibility
  - In compliance with the 2002/95/EC european directive
- Diagnostic functions
  - Open Drain status output
  - On-state open load detection
  - Off-state open load detection
  - Output short to  $V_{CC}$  detection
  - Overload and short to ground (power limitation) indication
  - Thermal shut-down indication
- Protections
  - Undervoltage shut-down
  - Overvoltage clamp
  - Load current limitation
  - Self-limiting of fast thermal transients
  - Protection against loss of ground and loss of  $V_{CC}$
  - Over-temperature shut-down with autorestart (thermal shut-down)
  - Reverse battery protected <sup>(a)</sup>
  - Electrostatic discharge protection

### Application

- All types of resistive, inductive and capacitive loads.

### Description

The VN5E050J-E is a single channel high-side driver manufactured in the ST proprietary VIPower M0-5 technology and housed in the tiny PowerSSO-12 package.

The VN5E050J-E is designed to drive automotive grounded loads delivering protection, diagnostics and easy 3V and 5V CMOS-compatible interface with any microcontroller.

The device integrates advanced protective functions such as load current limitation, inrush and overload active management by power limitation, over-temperature shut-off with auto-restart and over-voltage active clamp.

A dedicated active low digital status pin is associated with every output channel in order to provide *Enhanced* diagnostic functions including fast detection of overload and short-circuit to ground, over-temperature indication, short-circuit to  $V_{CC}$  diagnosis and ON & OFF state open-load detection.

The diagnostic feedback of the whole device can be disabled by pulling the STAT\_DIS pin up, thus allowing wired-ORing with other similar devices.

a. See [Application schematic](#).

Table 2. Suggested connections for unused and not connected pins

| Connection / pin | Status      | N.C. | Output      | Input                 | STAT_DIS              |
|------------------|-------------|------|-------------|-----------------------|-----------------------|
| Floating         | X           | X    | X           | X                     | X                     |
| To ground        | Not allowed | X    | Not allowed | Through 10KΩ resistor | Through 10KΩ resistor |

## 2 Electrical specifications

Figure 3. Current and voltage conventions

Note:  $V_F = V_{OUT} - V_{CC}$  during reverse battery condition.

### 2.1 Absolute maximum ratings

Stressing the device above the ratings listed in the “Absolute maximum ratings” tables may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to the conditions in the “Absolute maximum ratings” tables for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

Table 3. Absolute maximum ratings

| Symbol                | Parameter   | Value              | Unit |
|-----------------------|---|--------------------|------|
| V <sub>CC</sub>       | DC supply voltage   | 41                 | V    |
| -V <sub>CC</sub>      | Reverse DC supply voltage   | 0.3                | V    |
| -I <sub>GND</sub>     | DC reverse ground pin current   | 200                | mA   |
| I <sub>OUT</sub>      | DC output current   | Internally limited | A    |
| -I <sub>OUT</sub>     | Reverse DC output current   | 15                 | A    |
| I <sub>IN</sub>       | DC input current  | +10 / -1           | mA   |
| I <sub>STAT</sub>     | DC status current   | +10 / -1           | mA   |
| I <sub>STAT_DIS</sub> | DC status disable current   | +10 / -1           | mA   |
| E <sub>MAX</sub>      | Maximum switching energy<br>(L=3mH; R <sub>L</sub> =0Ω; V <sub>bat</sub> =13.5V; T <sub>jstart</sub> =150°C; I <sub>OUT</sub> = I <sub>limL</sub> (Typ.)) | 104                | mJ   |

**Table 3. Absolute maximum ratings (continued)**

| Symbol           | Parameter   | Value       | Unit |
|------------------|---|-------------|------|
| V <sub>ESD</sub> | Electrostatic discharge<br>(Human Body Model: R=1.5KΩ; C=100pF) |             |      |
|                  | - INPUT   | 4000        | V    |
|                  | - STATUS  | 4000        | V    |
|                  | - STAT_DIS  | 4000        | V    |
|                  | - OUTPUT  | 5000        | V    |
|                  | - V <sub>CC</sub>   | 5000        | V    |
| V <sub>ESD</sub> | Charge device model (CDM-AEC-Q100-011)                          | 750         | V    |
| T <sub>j</sub>   | Junction operating temperature                                  | -40 to 150  | °C   |
| T <sub>stg</sub> | Storage temperature   | - 55 to 150 | °C   |

## 2.2 Thermal data

**Table 4. Thermal data**

| Symbol                | Parameter   | Value                         | Unit |
|-----------------------|---|-------------------------------|------|
| R <sub>thj-case</sub> | Thermal resistance junction-case (max)<br>(with one channel ON) | 2.7                           | °C/W |
| R <sub>thj-amb</sub>  | Thermal resistance junction-ambient (max)                       | See <a href="#">Figure 36</a> | °C/W |

## 2.3 Electrical characteristics

Values specified in this section are for  $8V < V_{CC} < 28V$ ;  $-40^{\circ}C < T_j < 150^{\circ}C$ , unless otherwise stated.

**Table 5. Power section**

| Symbol        | Parameter                         | Test conditions  | Min.   | Typ.                  | Max.                  | Unit                                |
|---------------|-----------------------------------|--|--------|-----------------------|-----------------------|-------------------------------------|
| $V_{CC}$      | Operating supply voltage          |  | 4.5    | 13                    | 28                    | V                                   |

1. To ensure long term reliability under heavy overload or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device is subjected to abnormal conditions, this software must limit the duration and number of activation cycles.

### 3 Application information

Figure 32. Application schematic

#### 3.1 GND protection network against reverse battery

##### 3.1.1 Solution 1: resistor in the ground line (R<sub>GND</sub> only)

This solution can be used with any type of load.

The following is an indication on how to dimension the R<sub>GND</sub> resistor.

1.  $R_{GND} \leq 600\text{mV} / (I_{S(on)max})$ .
2.  $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where -I<sub>GND</sub> is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power dissipation in R<sub>GND</sub> (when V<sub>CC</sub><0: during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared amongst several different HSDs. Please note that the value of this resistor should be calculated with formula (1) where I<sub>S(on)max</sub> becomes the sum of the maximum on-state currents of the different devices.

Please note that if the microprocessor ground is not shared by the device ground then the R<sub>GND</sub> will produce a shift (I<sub>S(on)max</sub> \* R<sub>GND</sub>) in the input thresholds and the status output values. This shift will vary depending on how many devices are ON in the case of several high side drivers sharing the same R<sub>GND</sub>.

If the calculated power dissipation leads to a large resistor or several devices have to share the same resistor then ST suggests Solution 2 is used (see below).

### 3.1.2 Solution 2: diode ( $D_{GND}$ ) in the ground line

A resistor ( $R_{GND}=1k\Omega$ ) should be inserted in parallel to  $D_{GND}$  if the device drives an inductive load.

This small signal diode can be safely shared amongst several different HSDs. Also in this case, the presence of the ground network will produce a shift ( $\sim 600mV$ ) in the input threshold and in the status output values, if the microprocessor ground is not common to the device ground. This shift will not vary if more than one HSD shares the same diode/resistor network.

## 3.2 Load dump protection

$D_{ld}$  is necessary (Voltage Transient Suppressor) if the load dump peak voltage exceeds to  $V_{CC}$  max DC rating. The same applies if the device is subject to transients on the  $V_{CC}$  line that are greater than the ones shown in the ISO T/R 7637/2 table.

## 3.3 MCU I/Os protection

If a ground protection network is used and negative transient are present on the  $V_{CC}$  line, the control pins will be pulled negative. ST suggests that a resistor ( $R_{prot}$ ) be inserted in line to prevent the  $\mu C$  I/Os pins to latch-up.

The value of these resistors is a compromise between the leakage current of  $\mu C$  and the current required by the HSD I/Os (Input levels compatibility) with the latch-up limit of  $\mu C$  I/Os.

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH} - V_{GND}) / I_{IHmax}$$

Calculation example:

For  $V_{CCpeak} = -100V$  and  $I_{latchup} \geq 20mA$ ;  $V_{OH\mu C} \geq 4.5V$

$$5k\Omega \leq R_{prot} \leq 180k\Omega.$$

Recommended  $R_{prot}$  value is  $10k\Omega$ .

### 3.4 Open load detection in Off state

Off-state open-load detection requires an external pull-up resistor ( $R_{PU}$ ) connected between the OUTPUT pin and a positive supply voltage ( $V_{PU}$ ) like the +5V line used to supply the microprocessor.

The external resistor has to be selected according to the following requirements:

1. No false open load indication when load is connected: in this case we have to avoid  $V_{OUT}$  to be higher than  $V_{OLmin}$ ; this results in the following condition  $V_{OUT} = (V_{PU} / (R_L + R_{PU})) R_L < V_{OLmin}$ .
2. No misdetection when load is disconnected: in this case the  $V_{OUT}$  has to be higher than  $V_{OLmax}$ ; this results in the following condition  $R_{PU} < (V_{PU} - V_{OLmax}) / I_{L(off2)}$ .

Because  $I_{s(OFF)}$  may significantly increase if  $V_{out}$  is pulled high (up to several mA), the pull-up resistor  $R_{PU}$  should be connected to a supply that is switched OFF when the module is in standby.

The values of  $V_{OLmin}$ ,  $V_{OLmax}$  and  $I_{L(off2)}$  are available in the Electrical characteristics section.

**Figure 33. Open load detection in Off state**

### 3.5 Maximum demagnetization energy ( $V_{CC} = 13.5V$ )

Figure 34. Maximum turn-off current versus inductance

Note: Values are generated with  $R_L = 0 \Omega$ . In case of repetitive pulses,  $T_{jstart}$  (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

## 4 Package and PCB thermal data

### 4.1 PowerSSO-12 thermal data

Figure 35. PowerSSO-12 PC board

Note: Layout condition of  $R_{th}$  and  $Z_{th}$  measurements (PCB: Double layer, Thermal Vias, FR4 area= 77mm x 86mm, PCB thickness=1.6mm, Cu thickness=70  $\mu$ m (front and back side), Copper areas: from minimum pad lay-out to 8cm<sup>2</sup>).

Figure 36.  $R_{thj-amb}$  Vs. PCB copper area in open box free air condition

Figure 37. PowerSSO-12 thermal impedance junction ambient single pulse

Equation 1: pulse calculation formula

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

where  $\delta = t_p/T$

Figure 38. Thermal fitting model of a single channel HSD in PowerSSO-12 (a)

- a. The fitting model is a simplified thermal tool and is valid for transient evolutions where the embedded protections (power limitation or thermal cycling during thermal shutdown) are not triggered.

Table 13. Thermal parameter

| Area/island (cm <sup>2</sup> ) | Footprint | 2   | 8   |
|--------------------------------|-----------|-----|-----|
| R1 (°C/W)                      | 0.7       |     |     |
| R2 (°C/W)                      | 2.8       |     |     |
| R3 (°C/W)                      | 3         |     |     |
| R4 (°C/W)                      | 8         | 8   | 7   |
| R5 (°C/W)                      | 22        | 15  | 10  |
| R6 (°C/W)                      | 26        | 20  | 15  |
| C1 (W.s/°C)                    | 0.001     |     |     |
| C2 (W.s/°C)                    | 0.0025    |     |     |
| C3 (W.s/°C)                    | 0.0166    |     |     |
| C4 (W.s/°C)                    | 0.2       | 0.1 | 0.1 |
| C5 (W.s/°C)                    | 0.27      | 0.8 | 1   |
| C6 (W.s/°C)                    | 3         | 6   | 9   |

## 5 Package and packing information

### 5.1 ECOPACK® packages

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second-level interconnect. The category of Second-Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97.

The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).

### 5.2 Package mechanical data

Figure 39. PowerSSO-12 package dimensions

Table 14. PowerSSO-12 mechanical data

| Symbol | Millimeters |       |       |
|--------|-------------|-------|-------|
|        | Min.        | Typ.  | Max.  |
| A      | 1.250       |       | 1.620 |
| A1     | 0.000       |       | 0.100 |
| A2     | 1.100       |       | 1.650 |
| B      | 0.230       |       | 0.410 |
| C      | 0.190       |       | 0.250 |
| D      | 4.800       |       | 5.000 |
| E      | 3.800       |       | 4.000 |
| e      |             | 0.800 |       |
| H      | 5.800       |       | 6.200 |
| h      | 0.250       |       | 0.500 |
| L      | 0.400       |       | 1.270 |
| k      | 0°          |       | 8°    |
| X      | 2.200       |       | 2.800 |
| Y      | 2.900       |       | 3.500 |
| ddd    |             |       | 0.100 |

### 5.3 Packing information

Figure 40. PowerSSO-12 tube shipment (no suffix)

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
