

DisplayPort 1:1 Signal Repeater and Signal Conditioner

Check for Samples: [SN75DP119](#)

FEATURES

- **DP signal repeater**
- **Supports Data Rates up to 2.7Gbps**
- **Fixed Equalizer With 3 Selectable Settings**
- **12kV ESD HBM**
- **Temperature Range: 0..85°C**
- **14 Pin 3.5x3.5mm RGY Package or 36-Pin 6.0x6.0mm RHH Package**

APPLICATIONS

- **eDP**
- **Desktop PC**
- **Notebook PC**
- **PC Docking Station**
- **PC Standalone Video Card**

DESCRIPTION

The SN75DP119 is a 1-lane or 2-lane embedded DisplayPort (eDP) repeater that regenerates the DP high speed digital link. The device compensates for pcb related frequency loss and signal reflections. This is especially helpful in designs with long pcb traces or when there is a FET switch in the signal path.

Four levels of differential output voltage swing (V_{OD}) and any combination of pre-emphasis using these V_{OD} levels are supported. The output swing and pre-emphasis are configured through device control inputs. The available output swing levels are 300mV_{PP}, 400mV_{PP}, 600mV_{PP} or 750mV_{PP}. Therefore, the output pre-emphasis level can be configured to 0dB, 2.0dB, 2.5dB, 3.5dB, 5.5dB, 6dB, or 8dB. This is a good solution for embedded link applications, such as the connection from the GPU to the notebook internal panel. To adjust the output signal level adaptively during link training, the implementation needs to control the device control inputs.

The SN75DP119 supports programmable integrated receiver equalization circuitry. This equalization circuitry can be used to help improve signal integrity in applications where the input link has a high level of insertion loss. The equalizer can be set to 3dB or 6dB equalization. The equalizer can also be turned off.

The SN75DP119 consumes between 64mW and 175mW depending on the selected mode of operation. The device also supports an ultra low power standby mode. In this mode, the outputs are disabled and the device draws less than 700μW of power.

The device is characterized for an extended operational temperature range from 0°C to 85°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

TYPICAL IMPLEMENTATIONS

PIN FUNCTIONS

PIN		DESCRIPTION
SIGNAL	I/O	
MAIN LINK INPUT PINS		
IN0p/n	I [100Ω diff]	DisplayPort Main Link Channel 0 Differential Input
IN1p/n		DisplayPort Main Link Channel 1 Differential Input
MAIN LINK OUTPUT PINS		
OUT0p/n	O [100Ω diff]	DisplayPort Main Link Channel 0 Differential Output
OUT1p/n		DisplayPort Main Link Channel 1 Differential Output
CONTROL PINS		
EN	3-level Input [CMOS]	Enable. This input is a 3-level input. If the input is left open, the internal input biasing pulls the input level to VCC/2. The input can also be pulled high or low externally. This allows to configure the device for 1-channel mode, 2-channel mode or power down mode. EN = HIGH: Device in Normal Mode, both outputs OUT1 and OUT2 are enabled; EN = VCC/2 (input left floating): Device in Normal mode, 2 nd output is disabled; EN = LOW: Device in Power Down mode. All outputs are high-impedance; Inputs are ignored
PRE_CTL	3-level Input [CMOS]	Configures the output pre-emphasis level. This input is a 3-level input. If the input is left open, the internal input biasing pulls the input level to VCC/2. The input can also be pulled high or low externally. This allows to configure the pre-emphasis for 3 different levels. See Table 4 for configuration details.
VOD_CTL	3-level Input [CMOS]	Configures the output amplitude VOD level. This input is a 3-level input. If the input is left open, the internal input biasing pulls the input level to VCC/2. The input can also be pulled high or low externally. This allows to configure 3 different output swing amplitudes. See Table 4 for configuration details.
EQ_CTL	3-level Input [CMOS]	Configures the EQ input setting for both differential inputs. This input is a 3-level input. If the input is left open, the internal input biasing pulls the input level to VCC/2. The input can also be pulled high or low externally. This allows to configure the pre-emphasis for 3 different levels. EQ_CTL = LOW: 0dB (EQ turned off) EQ_CTL = VCC/2 (input left floating): 3dB fixed EQ_CTL = HIGH (input tied to VCC): 6dB fixed EQ
SUPPLY AND GROUND PINS		
VCC	pwr	3.3V Supply
GND	pwr	Ground

STATUS DETECT AND OPERATING MODES FLOW DIAGRAM

The SN75DP119 switches between the power saving and the active modes in the following way:

Figure 3. SN75DP119 Operational Modes Flow Chart

Table 3. Description of SN75DP119 Modes

MODE	CHARACTERISTICS	CONDITIONS
ShutDown Mode	Least amount of power consumption (all circuitry turned off); outputs are high-impedance	EN is low
2- channel Active Mode	Data transfer (normal operation); The device outputs OUTx represents the data received on the input INx. The input EQ and output pre-emphasis and output swing voltage level are controlled through the external control pins.	EN is high (both main link outputs enabled)
1-channel Active Mode	Data transfer (normal operation); The device output OUT0 represents the data received on the input IN0. The 2 nd channel (IN1 and OUT1) are disabled. The input EQ and output pre-emphasis and output swing voltage level are controlled through the external control pins.	EN is VCC/2 (only main link channel 0 enabled)

PRE-EMPHASIS AND VOD OUTPUT SWING SETTINGS

The SN75DP119 allows configuring output pre-emphasis and output swing through the external control inputs. The following options are valid:

Table 4. Pre-Emphasis and V_{OD} Output Swing Configuration

	PRE_CTL = LOW	PRE_CTL = VCC/2 (INPUT LEFT FLOATING)	PRE_CTL = HIGH
VOD_CTL = LOW	V _{OD} = 300 mV _{PP} ; 2.5 dB pre-emphasis (lowest power consumption)	V _{OD} = 300 mV _{PP} ; 6 dB pre-emphasis	V _{OD} = 300 mV _{PP} ; 8.5 dB pre-emphasis
VOD_CTL = VCC/2 (input left floating)	V _{OD} = 400 mV _{PP} ; no pre-emphasis	V _{OD} = 400 mV _{PP} ; 3.5 dB pre-emphasis	V _{OD} = 400 mV _{PP} ; 5.5 dB pre-emphasis
VOD_CTL = HIGH	V _{OD} = 600 mV _{PP} ; no pre-emphasis	V _{OD} = 600 mV _{PP} ; 2.5 dB pre-emphasis	V _{OD} = 800 mV _{PP} ; no pre-emphasis

ORDERING INFORMATION⁽¹⁾

(1) This current consumption also applies to VOD=400mV with 5.5 dB pre-emphasis or VOD=600mV output swing and 2dB pre-emphasis

(2) This current consumption also applies to VOD=300mV with 2 dB pre-emphasis

(3) This current consumption also applies to VOD=300mV with 6dB pre-emphasis or VOD=400mV output swing and 3.5dB pre-emphasis

MAIN LINK IO

The SN75DP119 is designed to support the DisplayPort high speed differential main link with three levels of output voltage swing and three levels of pre-emphasis. The main link I/Os of the SN75DP119 are designed to be compliant with the DisplayPort 1.1a specification.

RECOMMENDED OPERATING CONDITIONS

	MIN	NOM	MAX	UNIT
MAIN LINK DIFFERENTIAL INPUT AND OUTPUT PINS IN[4:1] AND OUT[4:1]				
V_{ID} Peak-to-peak input differential voltage – HBR (high bit rate)	0.15		1.4	V _{PP}
V_{ID} Peak-to-peak input differential voltage – LBR (low bit rate)	0.15		1.4	V _{PP}
d_R Data rate			2.7	Gbps
C_{AC} AC coupling capacitance (each input and each output line)	1×75		2×200	nF
R_{tdiff} Differential output termination resistance	80	100	120	Ω
V_{Oterm} Output termination voltage (AC coupled)	0		2	V
$t_{SK(in\ HBR)}$ Intra-pair skew at the input package pins using 2.7 Gbps input data rate			100	ps
$t_{SK(in\ LBR)}$ Intra-pair skew at the input package pins using 1.62 Gbps input data rate			300	ps
$t_{R/F}$ Input rise and fall time			160	ps

ELECTRICAL CHARACTERISTICS

APPLICATION INFORMATION

Device Schematic

Figure 12 provides a simple schematic reference for the 14-pin package. In addition to this schematic sufficient VCC decoupling for the 3.3V power supply is necessary.

Figure 12. Simplified Schematic drawing

Layout Recommendation

Data rates of 2.7Gbps require fast edge rate, which can cause EMI radiation if the pcb is not designed carefully. Decoupling with small current loops is recommended. It is recommended to place the de-coupling cap as close as possible to the device and on the same side of the pcb (see Figure 13). Choose the capacitor such that the resonant frequency of the capacitor does not align closely with 2.7GHz. Also provide several GND vias to the thermal pad to minimize the area of current loops.

Figure 13. De-Coupling Layout Recommendation

PACKAGING INFORMATION

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Only one of markings shown within the brackets will appear on the physical device.

PLASTIC QUAD FLATPACK NO-LEAD

4203539-2/1 06/2011

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - QFN (Quad Flatpack No-Lead) package configuration.
 - The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
 - Pin 1 identifiers are located on both top and bottom of the package and within the zone indicated. The Pin 1 identifiers are either a molded, marked, or metal feature.
 - Package complies to JEDEC MO-241 variation BA.

RGY (S-PVQFN-N14)

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

PLASTIC QUAD FLATPACK NO-LEAD

4208122-2/0 11/11

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.

PLASTIC QUAD FLATPACK NO-LEAD

4205094/E 06/11

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. QFN (Quad Flatpack No-Lead) Package configuration.
 - D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
 - F. Falls within JEDEC MO-220.

RHH (S-PVQFN-N36)

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

NOTE: All linear dimensions are in millimeters

RHH (S-PQFP-N36)

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SCBA017, SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - F. Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
