SENSING AND CONTROL

Product Catalog

Honeywell

SENSORS AND SWITCHES

Honeywell offers a wide selection of products and technology capability for applications in medical devices and equipment; heating, ventilation, air-conditioning and refrigeration; information technology; home appliances; motor control and automotive passenger cars. This catalogue contains a selection of our most popular, established product listings. To view our complete range of products, visit our web site at www.honeywell.com/sensing.

How to use this catalogue

For each referenced listing, key specification parameters, descriptions and mounting drawing information are presented. These listings illustrate our capabilities while the specifications included allow easy differentiation between similar products. For products with no specific reference numbers, please contact your local Honeywell sales office.

There are, of course, many more product options available. Full product specification information may be accessed on our web site (www.honeywell.com/sensing). At the Home page enter the catalogue listing reference in the SEARCH box and click GO! This will take you directly to the interactive catalogue/specification search tables for this listing. Alternatively, select and click the interactive catalogue icon on the Home page and then choose a product category against which to do a specification search.

Also on the web site you can access installation instructions, application notes, Frequently Asked Questions (FAQs), selection guides and additional technical information.

Mounting dimensions

Mounting dimensions shown in each product section are for reference only. For exacting layout work, request an engineering drawing from your nearest Honeywell sales office. Where dual dimensions are shown on mounting drawings, the first or upper one is millimetres (mm) and the second or lower is inches (in). Where single dimensions are shown, they are millimetres (mm), unless otherwise stated.

To order these products

Simply contact your local Honeywell Distributor or your local Honeywell office. More information on Honeywell products and how to contact us can be found at <http://locator.micro.honeywell.com/>

Honeywell – delivering excellence

To assist in delivering the right products for our customers' applications, we listen to them to understand their needs. Using techniques such as "Voice of the Customer" and "Concept Engineering," we aim to deliver the products and solutions. As part of Honeywell we can use local knowledge and understanding combined with global expertise and resources to achieve this. We can deploy many key technologies to bring innovative solutions to customers' problems.

Our products are manufactured to work well and to last. We use Six Sigma Plus productivity to ensure this is the case. We have award winning manufacturing facilities around the world and recognised world class business excellence in manufacturing and supply chain management to deliver on time, anywhere in the world.

Our e-business approach offers instant access to product information, technical support and application knowledge through our Internet site. Check out our powerful new interactive catalogue that can search and find the right products for customers' needs and deliver a drawing ready for incorporation in a CAD system direct to your desk.

And of course, we manage our whole business for the benefit of our customers, using an acknowledged world-class business excellence approach that incorporates Six Sigma principles.

CONTENTS

Pressure Sensors Page 4

Absolute, differential, gage and vacuum gage pressure sensors for media that are compatible with a silicon diaphragm. These sensors are often ideal for low-cost, commercial-grade applications such as printed circuit boards. Small and reliable, they aim to offer excellent repeatability and high accuracy under varying environmental conditions.

Mass Airflow Sensors Page 13

Amplified and unamplified microbridge mass airflow sensors aim at providing a sensitive, fast response and high accuracy over a broad range of gas and air flows.

Force Sensors Page 16

Compact, extremely sensitive devices for precise, reliable performance in many applications that requires precision force measurement.

Humidity Sensors Page 18

Relative humidity sensors with on-chip signal conditioning. Chemically resistant packaging to accommodate many harsh environments. Sensor construction consists of a planar capacitor with a second polymer layer to protect against dirt, dust, oils and other hazards.

Temperature Sensors - RTDs Page 19

Platinum and silicon-based thin film resistance temperature devices (RTDs) for appropriate applications requiring small package size, accuracy and linear outputs.

Temperature Sensors - Thermistors Page 21

Precision Hi-Rel negative temperature coefficient (NTC) thermistors and positive temperature coefficient (PTC) thermistors for use in a broad variety of temperature measurement and control applications.

Temperature Sensors - Probes Page 27

A variety of customized probes for use in the automotive and other industries.

Thermal Cutoffs Page 30

Dependable organic thermal cutoffs in temperatures ranging from 72 °C to 240 °C [162 °F to 464 °F]. They are available in various lead lengths and configurations.

Thermostats Redi-Temp® Page 32

Redi-Temp® is a line of standard thermostats offered in a range of pre-set temperatures. These standard products are available for immediate delivery. They are often useful for low-volume applications where standard configurations are acceptable.

Thermostats - Commercial Page 34

Dependable bi-metal thermostats include a choice of automatic or manual reset, phenolic or ceramic housings and a variety of mounting brackets and terminal options.

Thermostats - Precision Page 42

Hermetic and non-hermetic thermostats in standard and custom packages for use in a wide variety of precision applications.

Thermostats - High Reliability Page 63

Meet the stringent requirements of military and aerospace industries for dielectric strength, moisture resistance, vibration, shock and hermetic seal. These products meet all domestic and international approvals, as well as appropriate military specifications.

Combi-sensor Page 65

Liquid pressure/temperature sensor that uses piezoresistive and thermistor sensing technology to measure water pressure and temperature.

Heaters Page 66

Wire-wound, chemically-etched, high temperature and transparent heaters in a variety of sizes and geometries.

Magnetic Position Sensors Page 68

Hall effect and magnetoresistive sensors for many applications that require accurate, reliable outputs.

Infrared Products Page 74

Optoelectronic standard infrared emitting diodes (IREDs), sensors and assemblies for object presence, limit and motion sensing, position encoding and movement encoding.

Current Sensors Page 81

Adjustable linear null balance, digital and linear output current sensors for monitoring ac or dc current.

Liquid Level Sensors Page 87

Sensitive sensors in a variety of housing types for detecting the presence or absence of a wide range of liquids.

Basic Switches Page 89

Standard, miniature and subminiature switches available in a range of enclosures and with a variety of actuators. They are often ideal for use alone or built into assemblies.

Turbidity Sensors Page 99

Turbidity sensing aims to provide a quick, practical indication of the relative amount of solids suspended in water or liquids.

Pin 1 is notched, Pin 2 is next to Pin 1, etc.

Honeywell pressure sensors are small, low cost and reliable. They promote excellent repeatability, high accuracy and reliability under varying environmental conditions. In addition, they feature highly consistent operating characteristics from one sensor to the next and interchangeability without recalibration.

We offer three pressure sensor measurement types—absolute, differential and gage—including vacuum gage and bidirectional types. A wide variety of pressure ranges, along with both amplified and unamplified versions, are available.

Honeywell pressure sensors are best used in applications which require precision pressure measurement.

Mass Airflow Sensors

Mass Airflow sensors contain a thin-film, thermally isolated bridge structure that consists of a heater and temperature sensing elements. The bridge structure promotes sensitivity and fast response to the flow of air or other gas over the chip.

State-of-the-art chip design and manufacturing techniques allow the microbridge to be sensitive, fast and small. Used in appropriate applications where airflow needs to be measured.

Supply voltage: 8 Vdc to 15 Vdc
Operating temperature: -25 °C to 85 °C [-13 °F to 185 °F]
Media compatibility: Dry gas only

AWM2000 Series

The AWM2000 Series microbridge mass airflow sensor is a passive device comprised of two Wheatstone bridges and has bidirectional sensing capability. The heater control circuit is required for operation per specifications. The sensing bridge supply circuit is also required for operation per specifications. These two circuits are not on board the package and must be supplied in the application. The differential amplifier is often a useful interface for the sensing bridge. It can be used to introduce gain and to voltage offsets to the sensor output.

Signal conditioning: Unamplified (-44.5 mVdc to 44.5 mVdc)
Port style: Straight
Sensor resistance: 5 kOhm

FLOW/PRESSURE RANGE	REFERENCE
±200 sccm	AWM2100V
±4.0 in H ₂ O (10 mBar)	AWM2200V
±1000 sccm (1 SLPM)	AWM2300V

AWM3000 Series

Like the AWM2000 Series, the dual Wheatstone bridges control airflow measurement. The AWM3000 Series is amplified; therefore, it can be used to increase the gain and to introduce voltage offsets to the sensor output. The heater control circuit and the sensing bridge supply circuit are on board the package.

Signal conditioning: Amplified (1 Vdc to 5 Vdc)
Port style: Straight

FLOW/PRESSURE RANGE	REFERENCE
±200 cm	AWM3100V
+2.0 in H ₂ O (5 mBar)	AWM3200V
±1000 sccm (1 SLPM)	AWM3300V

AWM4000 Series

The microbridge mass airflow sensor operates on the theory of heat transfer. Mass airflow is directed across the surface of the sensing elements. Output voltage varies in proportion to the mass air or other gas flow through the inlet and outlet ports of the package. The specially designed housing precisely directs and controls the airflow across the microstructure sensing element. Mechanical design of the package typically allows it to be easily mounted to printed circuit boards.

The microbridge mass airflow sensor has a unique silicon chip based on advanced microstructure technology. It consists of a thin-film, thermally isolated bridge structure containing heater and temperature sensing elements. The bridge structure provides a sensitive and fast response to the flow of air or other gas over the chip. Dual sensing elements positioned on both sides of a central heating element indicate flow direction as well as flow rate. Laser trimmed thick film and thin film resistors provide consistent interchangeability from one device to the next.

Port style:

Manifold

AWM5000 Series - High Flow

AWM5000 Series microbridge mass airflow sensors feature a venturi type flow housing. They measure flow as high as 20 standard liters per minute (SLPM) while inducing a maximum pressure drop of 2.25 in H₂O. The microbridge chip is in direct contact with the flow stream, greatly reducing error possibilities due to orifice or bypass channel clogging.

The rugged plastic package has been designed to withstand common mode pressures up to 50 psi, and the small sensing element allows 100 g of shock without compromising performance. The included "AMP" compatible connector provides reliable connection in many demanding applications.

Each AWM5000 sensor contains circuitry which performs amplification, linearization, temperature compensation and gas calibration. A 1 Vdc to 5 Vdc linear output is possible for all listings regardless of flow range (5, 10, 15, or 20 SLPM) or calibration gas (nitrogen, carbon dioxide, nitrous oxide or argon). All calibration is performed by active laser.

Signal conditioning:

Amplified (1 Vdc to 5 Vdc)

Port style:

Threaded, 1/4 in NPT

CAUTION

PRODUCT DAMAGE

AWM Series Microbridge Mass Airflow Sensors are not designed to sense liquid flow and will be damaged by liquid flow through the sensor.

Failure to comply with these instructions could result in product damage.

AWM700 Series

AWM700 Series microbridge mass airflow sensors provide in-line flow measurement with a specially designed bypass flow housing. The sensors measure flow as high as 200 standard litres per minute (SLPM) while inducing a pressure drop of 1 inch H₂O, typically. The AWM700 has a high flow range capability in a small package.

Signal conditioning: Amplified (1 Vdc to 5 Vdc)
Port style: Tapered, 22 mm

---	------------------------------

NOTICE

LAMINAR FLOW

Due to the fast response time of the sensor, these specifications were generated using laminar flow. Airflow instability or “turbulence” present in the airstream will result in an increase in measurement uncertainty.

The turbulent flow problem can be corrected by either straightening the airflow using flow laminarizing or by slowing the response of the sensor using a simple RC time constant on the output of the sensor. This, of course, slows down the sensor response time. The values needed depend on the amount of turbulence present in the application.

Several techniques for laminarizing the flow include adding hex shaped honeycombs, foam, screen materials or adding constrictors (frits) to the flow stream. There are various commercial laminar flow elements that can be purchased. Unfortunately the greater the efficiency of the laminarizer, the greater the increase in pressure drop in order to establish a given flow rate. Plastic honeycomb material probably gives the most improvement for the least pressure drop. In any test fixture, the avoidance of sharp radii is an absolute requirement.

AWM90000 Series

The AWM90000 Series microbridge mass airflow sensors are available in two versions, mass flow and differential pressure. The AWM92100V has a flow range of ±200 sccm with a pressure drop of only 0.49 mBar, typically. The AWM92200V is a differential pressure version that has a range of ±2 in H₂O.

The AWM90000 Series has a 1 ms response time, operates with a supply voltage from 8.0 Vdc to 15.0 Vdc, while consuming only 50 mW of power. The compact plastic package will withstand a maximum overpressure of 25 psi without compromising performance.

Signal Conditioning: Unamplified
Port Style: Straight

Force Sensors

Force sensors operate on the principle that the resistance of silicon-implanted piezoresistors will increase when the resistors flex under any applied force. The sensor concentrates force from the application, through the stainless steel plunger, directly to the silicon sensing element. The amount of resistance changes in proportion to the amount of force being applied. This change in circuit resistance results in a corresponding mV output level.

FSG Series

Supply voltage: 360 mV span @ 10 Vdc
Operating temperature: -40 °C to 85 °C [-40 °F to 185 °F]
Sensitivity: 0.20 mV/g min., 0.24 mV/g typ., 0.28 mV/g max.
Overforce: 5500 g

Plunger actuator - force range 1500 g

Non-compensated

REFERENCE
FSG15N1A

FSL Series

Supply voltage: 60 mV span @ 5 Vdc
Operating temperature: -40 °C to 85 °C [-40 °F to 185 °F]
Sensitivity: 0.10 mV/g min., 0.12 mV/g typ., 0.14 mV/g max.
Overforce: 4500 g

Ball bearing actuator - force range 500 g

Non-compensated

Model 1865 Force/Pressure Transducer

Model 1865 is a high-performance transducer specifically designed to address the needs of certain medical and specialized OEM applications. Offering laser-trimmed compensation, Model 1865 may be specified to operate with either a constant current or voltage supply.

Model 1865 employs a solid state piezoresistive pressure transducer mounted in a plastic package. For applications where force is applied by a flexible membrane to the sensor, such as found in infusion pumps, Model 1865's precision height silicone diaphragm provides long life and is often a reliable replacement for older force or load cell transducers. Utilizing a silicon rubber diaphragm, Model 1865 is compatible with some liquid media applications. Model 1865 may be operated in either current or voltage excitation, and its output may be amplified or signal conditioned, as required. The semiconductor-based sensor offers high resolution using its Wheatstone bridge strain gage design. The height of the unit's patented, poured-in-place silicon rubber diaphragm is controlled to promote sensitivity to low pressure. This diaphragm is bonded to a plastic header and transmits force applied through a special silicone gel to the diaphragm of a silicon piezoresistive die. The back of the die is exposed to atmospheric pressure, which results in a gage pressure output.

Pressure over-range protection: 3X span or 60 psi, whichever is least
Media/materials compatibility

Top side: Room atmosphere, directly applied force, and liquids compatible with dimethyl silicon, polyetherimide (Ultem®)

Bottom side: Non-corrosive dry gasses and fluids compatible with silicon, pyrex, RTV silicone and ceramic

Sensor: Gage pressure
Diaphragm: Dimethyl silicone
Compensation: Laser-trimmed normalized output

FS Series Force/Pressure Sensor

The FS01/FS03 Sensors are special low-cost, piezoresistive-based force sensors. These high-level voltage output, calibrated and temperature-compensated sensors give an accurate and stable output over a 5 °C to 50 °C [41 °F to 122 °F] temperature range. They offer simple operation from a single 5.0 Vdc supply. The FS01/FS03 sensors feature an integrated circuit sensor element and laser-trimmed, thick-film ceramic in a small plastic housing. Their extremely small size often enables the use of multiple sensors in limited available space. This package also provides excellent corrosion resistance and isolation to external package stress.

Supply voltage: 12.0 Vdc
Operating temperature: 0 °C to 70 °C [32 °F to 158 °F]
Maximum force: 7 lb

PRESSURE	REFERENCE
0 lb to 1.5 lb	FS01
0 lb to 3.0 lb	FS03

Humidity Sensors

HIH-4000 Series

The HIH-4000 Series humidity sensors are designed specifically for high volume OEM users. Direct input to a controller or other device is made possible by this sensor's linear voltage output. With a typical current draw of only 200 μ A, the HIH-4000 Series is often ideally suited for low drain, battery operated systems. Tight sensor interchangeability reduces or eliminates OEM production calibration costs. Individual sensor calibration data is available.

These sensors deliver instrumentation-quality RH sensing performance in a competitively priced, solderable SIP. Available in two lead spacing configurations, the RH sensor is a laser trimmed, thermoset polymer capacitive sensing element with on-chip integrated signal conditioning.

Package style: Solderable SIP

CAUTION PRODUCT DAMAGE

The inherent design of this component causes it to be sensitive to the electrostatic discharge (ESD). To prevent ESD-induced damage and/or degradation, take normal ESD precautions when handling this product.

Failure to comply with these instructions could result in product damage

Relative Humidity/Temperature and Relative Humidity sensors are configured with integrated circuitry to provide on-chip signal conditioning. These sensors contain a capacitive sensing die set in thermoset polymers that interacts with platinum electrodes. The laser trimmed sensors have an interchangeability of ± 5 % from 0 %RH to 60 %RH, with stable, low drift performance.

Absorption based humidity sensors provide both temperature and %RH (Relative Humidity) outputs. On-chip signal processing ensures linear voltage output versus %RH. Sensor laser trimming offers accuracy of ± 2.5 %, and achieves 2 %RH accuracy with calibration.

Supply voltage: 4.0 Vdc to 5.8 Vdc
Operating humidity range: 0 %RH to 100 %RH, non-condensing
Operating temperature range: -40 °C to 85 °C [-40 °F to 185 °F]

HIH Series

HIH-3602 Monolithic integrated circuit

HIH-3602-A and HIH-3602-C RH sensors combine both relative humidity and temperature sensing in a TO-5 housing with a hydrophobic sintered stainless steel filter. The temperature sensor is thermally connected with the RH sensor making the HIH-3602-A/C often ideal for measuring dew point and other absolute moisture terms.

Package style: TO-5 can
Termination: 0,46 mm [0.18 in]
NIST certification: NIST calibration sensor-specific printout

HIH-3602-L Integrated circuit

The HIH-3602-L Relative Humidity (RH) sensor delivers instrumentation-quality RH sensing performance in a rugged, low cost, slotted TO-39 housing. On-board signal conditioning reduces product development times while a typical current draw of only 200 μ A makes the HIH-3602-L perfect for battery powered systems. This sensor should be shielded from bright light.

Package style: TO-39 can

Temperature Sensors - RTDs

Honeywell's thin-film RTD (Resistance Temperature Detector) temperature sensors feature two distinct series. These sensors are laser-trimmed for accuracy and interchangeability. Linear outputs are stable and fast.

The TD Series Temperature Sensors are silicon-based RTDs. They offer 2000 Ohm nominal resistance at 20 °C. Temperature range of -40 °C to 150 °C [-40 °F to 302 °F].

The HEL Series Temperature Sensors are platinum RTDs, offering 100 Ohm or 1000 Ohm versions and temperature ranges of -200 °C to 540 °C [-300 °F to 1000 °F].

HEL-700 Series 100/1000 Ohm Platinum RTD

Supply voltage: 4 Vdc to 9 Vdc
Base resistance and interchangeability: 1000 ±2 Ohm (±0.2 %) @ 0 °C (standard)

Temperature Sensors - Thermistors

Thermistors change resistance with a change in temperature. They do not amplify, rectify, polarize or generate a signal. The thermistor temperature may be changed by the surrounding temperature or by self-heating the thermistor by passing a current through it.

Most applications such as temperature measurement and control or copper coil compensation require that the power dispersed in a thermistor be kept to a minimum so as not to perceptibly self-heat the thermistor. Other applications depend entirely on the self-heating effect. When the surrounding temperature is fixed, the resistance of a thermistor is largely a function of power being dispersed within it, raising its temperature above its environment. Under these operating conditions, the temperature may rise 100 °C to 200 °C [121 °F to 392 °F] and the resistance may be lowered to 1/1000th of its original value at low current.

This self-heating characteristic provides a whole field of uses for the thermistor. In the self-heat state it is thermally sensitive (its resistance will be changed) to any condition, changing the rate at which heat is conducted away from it. If the rate of heat removal is ideally fixed, then the thermistor is sensitive to power input and suited for use in voltage or power level control applications.

Glass Encapsulated Chip (GEC) Thermistors

The GEC thermistors are high-quality, hermetically-sealed, glass-encapsulated chip thermistors in an axial lead package. They cover the full temperature range of -60 °C to 300 °C [-76 °F to 572 °F]. These rugged sensors are designed for many applications which demand reliability at low cost. The uniform dimensions often are ideally suited for automated assembly.

- Operating temperature:** -60 °C to 300 °C [-76 °F to 572 °F]
- Encapsulation:** DO-35 glass
- Lead material:** Tinned copper-clad steel
- Dissipation constant (DC):** 2.5 mW/°C in still air min.
- Time constant (TC):** 4 s in still air max.
- Resistance range at 25 °C [77 °F]:** 1 kOhm to 1 MOhm

Epoxy-coated or Uncoated Chip Thermistors

Epoxy-coated or uncoated chip thermistors are available in a broad range of custom resistance values and R/T curves. They are also available in two lead types:

- Uninsulated: 0,2032 mm [0.008 in] diameter, tinned copper for 1 kOhm or less, and tinned copper alloy for greater than 1 kOhm.
- Insulated: 0,254 mm [0.010 in] diameter, nickel wire, Teflon®-insulated, 38,1 mm [1.5 in] long and furnished with 6,35 mm [0.25 in] stripped ends of 0,4064 mm [0.016 in] and 0,508 mm [0.020 in] tin-plated copper leads.

Operating temperature range: -40 °C to 125 °C [-40 °F to 257 °F]*

Encapsulation: Epoxy-coated or uncoated

- Lead material:**
- Uninsulated: tinned copper/copper alloy
 - Insulated: tinned copper/copper alloy with nickel wire Teflon

Dissipation constant (DC): 0.75 mW/°C in still air min.

Time constant (TC): 15 s in still air max.

Resistance range at 25 °C [77 °F]: 100 Ohm to 100 kOhm

*Very accurate (±0.2 °C) when used between 0 °C to 70 °C [32 °F to 158 °F]. Other ranges and tolerances are available.

Disc Thermistors

Uncoated or epoxy-coated Disc thermistors are available in a broad range of custom resistance values and R/T curves. They are only available with uninsulated leads. Diameters range from 2,54 mm [0.1 in] to 10,16 mm [0.4 in]. They are often ideally suited for low-cost applications with a maximum temperature of 150 °C [302 °F]. They are also typically well suited for PC board mount and are available on tape and reel.

Operating temperature range: -60 °C to 150 °C [-76 °F to 302 °F]
Encapsulation: Epoxy-coated or uncoated
Lead material: Uninsulated: tinned copper/copper alloy
Dissipation constant (DC): Varies with size, ranges from 3 mW/°C to 8 mW/°C
Time constant (TC): Varies with size ranges from 10 s to 32 s
Resistance range at 25 °C [77 °F]: 100 Ohm to 100 kOhm

Standard Bead Thermistors

Standard Bead thermistors are hermetically-sealed in glass. These small units provide maximum stability when used to 300 °C [572 °F] for high temperature design requirements. They are often ideally suited for many stringent military, aerospace and oceanographic applications.

Operating temperature range: -60 °C to 300 °C [-76 °F to 572 °F]
Encapsulation: Glass hermetic seal
Lead material: Platinum iridium
Dissipation constant (DC): 0.4 mW/°C in still air min.
Time constant (TC): 4 s in still air max.
Resistance range at 25 °C [77 °F]: 200 Ohm to 1 MOhm

Small Bead Thermistors

Small Bead Thermistors feature relatively uniform size, offer ultra-fast time response and are highly sensitive to electric power. They are often ideally suited for use in low heat capacity applications and their micro size many times makes them perfect for use in extremely small assemblies such as catheters and hypodermic needles. They are also often used in self-heat applications such as gas analysis, gas flow measurement and thermal conductivity analysis.

Operating temperature range: -60 °C to 300 °C [-76 °F to 572 °F]
Encapsulation: Glass hermetic seal
Lead material: Platinum iridium
Dissipation constant (DC): 0.1 mW/°C in still air min.
Time constant (TC): 1 s in still air max.
Resistance range at 25 °C [77 °F]: 2 kOhm to 100 kOhm

Glass Probe Thermistors

Glass Probe thermistors are shock resistant, rugged, glass-encapsulated units that are ideally suited for immersion in fluid and convenient for mounting in air sensor assemblies. They are available in two configurations: standard and mini.

Operating temperature range: -60 °C to 300 °C [-76 °F to 572 °F]
Encapsulation: Glass
Lead material: Dumet (copper-clad Ni-Fe wire)
Dissipation constant (DC):

- Standard: 1.0 mW/°C in still air min.
- Mini: 0.7 mW/°C in still air min.

Time constant (TC):

- Standard: 22 s in still air max.
- Mini: 10 s in still air max.

Resistance range at 25 °C [77 °F]: 1 kOhm to 10 MOhm

E-I Matched Bead Thermistors

E-I Matched Bead thermistors are designed for use in many gas chromatography and other thermal conductivity gas analysis instruments. Each bead is mounted to a special hermetically-sealed header. For maximum sensitivity, the higher resistance units should be used at higher ambient temperatures.

Operating temperature range: -60 °C to 300 °C [-76 °F to 572 °F]
Encapsulation: Glass hermetic seal
Lead material: Tinned Ni-Fe

OPTIONS

Helium-matched assembly

Characteristics: 115-802EDJ-801
Resistance at 25 °C [77 °F]: 8000 Ohm ±25 %
Resistance at 0 °C [32 °F] (approx.): 23,200 Ohm
Resistance at 50 °C [122 °F] (approx.): 3,200 Ohm
Ratio of resistance 0 °C/50 °C: 6.56 to 7.99
Beta nominal at 25 °C: 3495 K
Temperature coefficient at 25 °C: -3.9 %/°C
Time constant (TC) still air max.: 1 s
Dissipation constant (DC) still air min.: 0.16 mW/°C
DC helium: 0.5 mW/°C
Power rating (air): 45 mW
Power rating (helium): 140 mW
Max. ambient temperature: 250 °C [482 °F]

Resistance at max. operating temperature: 25 Ohm

2 % resistance at 25 °C [77 °F]

DESCRIPTION	REFERENCE
Two 111-802EAJ-H01 each mounted on a glass hermetic seal and matched in helium to within 30 mV, 25 mV and 20 mV of each other at 2 mA, 5 mA, 10 mA and 15 mA.	115-802EDJ-801

Air-matched assembly

Characteristics: 115-202CDK-801
Resistance at 25 °C [77 °F]: 2000 Ohm ±25 %
Resistance at 0 °C [32 °F] (approx.): 4900 Ohm
Resistance at 50 °C [122 °F] (approx.): 890 Ohm
Ratio of resistance 0 °C/50 °C: 4.95 to 6.95
Beta nominal at 25 °C: 3000 K
Temperature coefficient at 25 °C: -3.4 %/°C
Time constant (TC) still air max.: 1 s
Dissipation constant (DC) still air min.: 0.16 mW/°C
DC helium: 0.5 mW/°C
Power rating (air): 15 mW
Power rating (helium): 60 mW
Max. ambient temperature: 100 °C [212 °F]
Max. operating temperature (including self-heat): 150 °C [302 °F]
Resistance at max. operating temperature: 88 Ohm

5 % resistance at 25 °C [77 °F]

DESCRIPTION	REFERENCE
Two 111-202CAK-H01 each mounted on a glass hermetic seal and matched in air to within 15 mV of each other at 5 mA, 10 mA and 15 mA.	115-202CDK-801

ICL Inrush Current Limiter Thermistors

ICL Inrush Current Limiter thermistors are a cost-effective way of limiting the inrush of current that may damage components in a switching power supply and in other power devices when the equipment is turned on. These devices have solderable leads and are PC board mountable.

Operating temperature range: -40 °C to 185 °C [-40 °F to 365 °F]
Maximum steady state current: 1 A to 30 A
Encapsulation: Black silicone
Lead material: Tinned copper
Dissipation constant (DC): 12.7 mW/°C to 23 mW/°C
Time constant (TC): 32 s to 93 s
Resistance range at 25 °C [77 °F]: 0.5 Ohm to 220 Ohm ±20 %
Resistance at max. steady state current: 0.01 Ohm to 2.34 Ohm
Max. diameter: 9.5 mm [0.374 in] to 32.0 mm [1.260 in]
Max. thickness: 5.0 mm [0.204 in] to 8.0 mm [0.327 in]
Lead diameter: 0.8 mm [0.032 in] to 1.0 mm [0.040 in]

Temperature Sensors - Probes

Temperature Sensor Probes are finished thermistor assemblies complete with thermistor housing, extension leads and usually a connector. A variety of customized packages are available.

NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

ES120 Series Coolant/Oil Temperature Sensor Probes

The ES120 probe is a thermistor mounted into a plastic lead frame and assembled into a metal body. This subassembly is then overmolded to produce both the electrical connection system and the hexagonal shape for easy installation. The all-plastic design reduces heat loss through the sensor, thereby reducing wind chill effects.

- Operating temperature range:** -40 °C to 155 °C [-40 °F to 311 °F]
- Encapsulation:** NTC (Negative Temperature Coefficient) encapsulated in thermal epoxy
- Lead material:** Terminals are 2,8 mm x 0,8 mm [0.11 in x 0.03 in] brass with a copper flash protection layer with final plating to customer requirement (silver, tin, gold, etc.)
- Dissipation constant:** Tor values (time to reach 63.2 % of the difference between two temperatures) are typically 19 s rising temperature and 14 s falling temperature
- Time constant:** None
- Resistance range at 25 °C [77 °F]** 2.5 kOhm at 20 °C [68 °F] ±5 %

SERIES NAME
ES120 Coolant/Oil Temperature Sensor Probe

ES110 Series Inlet Air Temperature Sensor Probes

The ES110 probe is a thermistor mounted into a plastic lead frame and assembled into a metal body. This subassembly is then overmolded to produce both the electrical connection system and the hexagonal shape for easy installation. Two end configurations are available depending upon response required or degree of protection. The all-plastic design reduces heat loss through the sensor, thereby reducing wind chill effects.

- Operating temperature range:** -40 °C to 155 °C [-40 °F to 311 °F]
- Encapsulation:** Standard NTC (Negative Temperature Coefficient) epoxy protection
- Lead material:** Terminals are 2,8 mm x 0,8 mm [0.11 in x 0.03 in] brass with a copper flash protection layer with final plating to customer requirement (silver, tin, gold, etc.)
- Dissipation constant:** 0.85 mW/°C in still air at 25 °C [77 °F]
- Time constant:** 1 s in liquids, 12 s max. in still air
- Resistance range at 25 °C [77 °F]** 2.5 kOhm at 20 °C [68 °F] ±5 %

SERIES NAME
ES110 Inlet Air Temperature Sensor Probe

Air Conditioning Temperature Sensor Probes

A fully overmolded and protected sensor incorporating a specially developed NTC (Negative Temperature Coefficient) to withstand many very aggressive, damp operating conditions. The housing is snap fit promoting easy assembly.

Operating temperature range: -30 °C to 100 °C [-22 °F to 212 °F]
Encapsulation: Special NTC epoxy coating
Lead material: Terminals are 2,8 mm x 0,8 mm [0.11 in x 0.03 in] brass with a copper flash protection layer with final plating to customer requirement (silver, tin, gold, etc.)
Dissipation constant: 2.5 mW/°C in still air
Time constant: 2 s in water, 15 s max. in still air
Resistance range at 25 °C [77 °F]: 9 kOhm at 0 °C [32 °F] ±1.5 %

NAME
Air Conditioning Temperature Sensor Probe

Earth Return (Ground) Temperature Sensor Probes

An all-metal temperature sensor, with the body being the ground, incorporating a flat disc thermistor held flush on the base of the body by a spring-loaded pressure pad. This sensor provides a quick response to small variations in high temperature changes.

Operating temperature range: -40 °C to 155 °C [-40 °F to 311 °F]
Encapsulation: NTC (negative temperature coefficient) encapsulated in a silicone paste
Lead material: Standard Lucar type or other variations
Dissipation constant: 3 mW/°C in still air
Time constant: 10 s in automotive coolant
Resistance range at 25 °C [77 °F]: Per customer requirements

NAME
Earth Return (Ground) Temperature Sensor Probe

Refrigerant Temperature Sensor Probes

A fully sealed, quick response temperature sensor suitable for use in many HVAC systems.

Operating temperature range: -40 °C to 140 °C [-40 °F to 284 °F]
Encapsulation: NTC (Negative Temperature Coefficient) encapsulated in a thermal heat paste
Lead material: Terminals are 1,5 mm x 0,6 mm [0.06 in x 0.02 in] brass with a copper flash protection layer with final plating to customer requirement (silver, tin, gold, etc.)
Dissipation constant: Tor values (time to reach 63.2 % of the difference between two temperatures) are typically 10 s rising temperature and 6 s falling temperature
Time constant: None
Resistance range at 25 °C [77 °F]: 2.5 kOhm at 20 °C [68 °F], calibrated at ±3 % at 100 °C [212 °F]

NAME
Refrigerant Temperature Sensor Probe

Surface Temperature Sensor Probes

Sensor assembly is designed to have good heat conductivity between the thermistor element and the area to be monitored. Time response is consistent with the thermal conductivity of the surface being measured. Multiple configurations allow sensor to be mounted, bolted, riveted or attached adhesively.

Operating temperature range: -60 °C to 150 °C [-76 °F to 302 °F]
Encapsulation: Thermally conductive epoxy used to pot discrete component into surface-style housing
Lead material: Insulated lead wires and terminals when required, other options available
Dissipation constant: 3.3 mW/°C to 12 mW/°C (varies with size and housing style)
Time constant: 1 s to 40 s (application dependent)
Resistance range at 25 °C [77 °F]: Per customer requirements

NAME
Surface Temperature Sensor Probe

Air/Gas Temperature Sensor Probes

Air/Gas probes contain an exposed thermistor element because gas is not as good a heat conductor or thermal sink as a liquid, and because time response is normally an important consideration. The sensor housing may be composed of plastic or other thermally conductive materials to reduce conduction and heat from the gas circulating around the thermistor. Multiple configurations allow easy mounting.

Operating temperature range:	-60 °C to 150 °C [-76 °F to 302 °F]
Encapsulation:	None, sensing element is exposed
Lead material:	Insulated lead wires and terminals when required, other options available
Dissipation constant:	0.1 mW/°C to 3 mW/°C (design specific)
Time constant:	4 s to 150 s (application and design dependent)
Resistance range at 25 °C [77 °F]:	Per customer requirements

NAME
Air/Gas Temperature Sensor Probe

Immersion Temperature Sensor Probes

Custom designed and application specific, immersion probes are designed to be directly placed in the liquid medium to be measured. A large variety of housing alloys are available. Multiple configurations allow easy mounting.

Operating temperature range:	-60 °C to 300 °C [-76 °F to 572 °F]
Encapsulation:	NTC (Negative Temperature Coefficient) encapsulated in housing appropriate to the application
Lead material:	Insulated lead wires and terminals when required, other options available
Dissipation constant:	5 mW/°C to 10 mW/°C (varies with size and housing style)
Time constant:	1 s to 12 s (design dependent)
Resistance range at 25 °C [77 °F]:	Per customer requirements

NAME
Immersion Temperature Sensor Probe

Thermal Cutoffs

Thermal Cutoffs include products for use in a wide array of small appliances, major appliances, office copy machines, automotive and HVAC equipment. These devices are available in various lead lengths and configurations. Honeywell offers versions that are compliant with European Directive 2002/95/EC, otherwise known as RoHS (Restriction of Hazardous Substances), in electrical and electronic equipment.

NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

NOTICE

- To maximize product life, use a 30 °C [86 °F] min. differential between the operating ambient temperature at the fuse location and the specified functioning temperature of the fuse being used. Maintain a 40 °C [104 °F] min. differential between devices with functioning temperatures above 200 °C [392 °F].
- Under no condition should the thermal cutoff be exposed to a continuous normal temperature rating in excess of 200 °C [392 °F]. Only proper testing of the above will determine the selected thermal cutoff's suitability within the application.

D Series

The D Series responds to temperature by interrupting an electrical circuit when the operating and/or environmental temperature exceeds the thermal rating of the fuse. This is accomplished when the organic pellet experiences a phase change, allowing the spring activated contacts to permanently open the circuit.

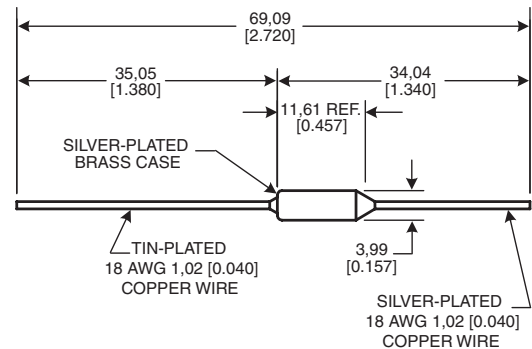

Operating temperature range: 72 °C to 240 °C [162 °F to 464 °F]
Environmental exposure range: see notice

NAME
DXXX-002

NAME
DXXX-001

NAME
DXXX-003

RD Series

The RD Series responds to temperature by interrupting an electrical circuit when the operating and/or environmental temperature exceeds the thermal rating of the fuse. This is accomplished when the organic pellet experiences a phase change, allowing the spring activated contacts to permanently open the circuit.

The electrical resistance of an RD Series thermal cutoff is comparable to that found in an equal length of 18 gage solid copper wire. With proper heat flow, heat generation below 15 A is minimal. Above 15 A, the upper limit on current capacity will depend on the environment for each specification.

Operating temperature range: 72 °C to 240 °C [162 °F to 464 °F]
Environmental exposure range: see notice on previous page

Thermostats - Redi-Temp®

3455RC 15 A High Temperature Universal Thermostat Series

Shipped from stock, the 3455RC Series thermostats are often suitable for applications such as copy machines, power supplies, telecommunications and ovens. UL, CSA and European approval agencies listings available.

Electrical rating: 15 A resistive max., 120 Vac
Housing material: High density ceramic base
Operating temperature range: 0 °C to 150 °C [32 °F to 302 °F]
Environmental exposure range: -18 °C to 288 °C [0 °F to 550 °F]

Redi-Temp® is a line of standard thermostat products offered in a range of pre-set temperatures. These products are available standard for immediate delivery. They are often useful for low-volume applications where standard configurations are acceptable, as well as for evaluating new designs and prototypes.

3100 SPST Hermetic Thermostat Series

Shipped from stock, the 3100 Series thermostats are often suitable for applications such as computers, medical electronics, power supplies, industrial controls and test equipment. They feature a laser-welded hermetic seal, are pre-set and tamper-proof. UL listings available.

Electrical rating: 30 A resistive max., 120 Vac/240 Vac
Environmental exposure range: -62 °C to 288 °C [-80 °F to 550 °F]

3600 Series Subminiature Thermostats TO-5 Package

Shipped from stock, the 3600 Series thermostats feature logic-level switching with gold contacts, have no power budget and are wave solderable with a hermetic seal. They are often suitable for applications such as power supplies, logic boards, telecommunications, medical electronics and robotics.

Electrical rating: 15 A resistive max., 120 Vac
Dielectric strength: 500 Vac, 60 Hz for 1 s
Operating temperature range: -40 °C to 100 °C [-40 °F to 212 °F]
Environmental exposure range: -50 °C to 177 °C [58 °F to 351 °F]

Thermostats - Commercial

Commercial thermostats include products for use in a wide array of small and major appliances, automotive applications, office copy machines, heat and smoke detectors and HVAC equipment. These snap-action thermostats include automatic or manual reset options, phenolic or ceramic housings, and a variety of mounting brackets and terminal options.

NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

NOTICE

Limitations: Type 2455RM/2450CM is intended as a manual reset control. It is not to be used on applications where a limit thermostat is required unless backup protection is provided. Units have been tested by UL for 1,000 cycles under load, 5,000 cycles no load, and are not considered limit devices.

WARNING PERSONAL INJURY

Do not use the bi-metallic, snap action thermostat components as final safety devices in any application. Their intended use is to provide an electrical disruption in the application circuit in the event of a change in temperature conditions.

Failure to comply with these instructions could result in death or serious injury.

2450R/2450HR/2455R Series Phenolic Automatic Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product. These products are factory calibrated to the customer's specification.

Reset type:	Automatic
Amperage capacity:	15 A resistive max.
Housing material:	Phenolic
Operating temperature range:	0 °C to 150 °C [32 °F to 302 °F]
Environmental exposure range:	0 °C to 150 °C [32 °F to 302 °F]

2450RC/2450RCH/2455RC Series Ceramic Automatic Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product.

Reset type:	Automatic
Amperage capacity:	15 A resistive max.
Housing material:	Ceramic
Operating temperature range:	0 °C to 260 °C [32 °F to 500 °F]
Environmental exposure range:	-20 °C to 287 °C [0 °F to 550 °F]

SERIES NAME
2450RC Ceramic Automatic Reset Thermostat

2450CM/2455RM Series Ceramic and Phenolic Manual Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. The circuit will stay open above room ambient temperature until the manual reset button is pressed. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product.

Reset type:	Manual
Amperage capacity:	15 A resistive max.
Housing material:	Ceramic or phenolic
Operating temperature range:	52 °C to 232 °C [125 °F to 450 °F] (ceramic) 52 °C to 150 °C [125 °F to 302 °F] (phenolic)
Environmental exposure range:	10 °C to 260 °C [50 °F to 500 °F] (ceramic) 10 °C to 150 °C [50 °F to 302 °F] (phenolic)

2450A/2455RA Series Heat Detection Thermostats

The gold contacts open or close on a temperature rise of 47 °C to 107 °C [117 °F to 225 °F].

Reset type: Automatic
Amperage capacity: 15 A resistive max.
Housing material: Phenolic, epoxy-sealed cap and terminals
Operating temperature range: 47 °C to 107 °C [117 °F to 225 °F]
Environmental exposure range: 0 °C to 150 °C [32 °F to 302 °F]

2455RBV Series Overmolded Automatic Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product.

Reset type: Automatic
Amperage capacity: 15 A resistive max.
Housing material: Ceramic or phenolic, epoxy overmold
Operating temperature range: -12 °C to 105 °C [10 °F to 221 °F]
Environmental exposure range: -18 °C to 121 °C [0 °F to 250 °F]

SERIES NAME
2455RBV Overmolded Automatic Reset Thermostat

2450R/2450RCH/2455R/2455RCH/2467RC/2467RCH Series "One-shot" ½ in Thermostats

Products are designed for high limit applications where automatic reset is not desired.

Reset type: None
Amperage capacity: 15 A resistive max.
 21 A resistive max. (2467RC/2467RCH Series)
Housing material: ceramic or phenolic, with or without epoxy-sealed cap and terminal
Operating temperature range: 52 °C to 260 °C [125 °F to 500 °F] (ceramic)
 52 °C to 250 °C [125 °F to 500 °F] (ceramic) (2467RC Series)
 52 °C to 150 °C [125 °F to 302 °F] (phenolic)
Environmental exposure range: -18 °C to 316 °C [0 °F to 600 °F] (ceramic)
 -18 °C to 150 °C [0 °F to 302 °F] (phenolic)

2450R Series Annular Ring Cap Automatic Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product.

Reset type:	Automatic
Amperage capacity:	15 A resistive, 12 Vdc
Housing material:	Phenolic, can be partially or totally sealed against water ingress
Operating temperature range:	-10 °C to 55 °C [14 °F to 131 °F]
Environmental exposure range:	-40 °C to 130 °C [-40 °F to 266 °F]
Life cycle capability:	300 K at 12 Vdc, 10 A
Low temperature differential:	Down to 8 °C [46 °F]
Switch temperature tolerance:	±3 °C

SERIES NAME
2450R Phenolic Annular Ring Cap Automatic Reset Thermostat

2450R/2455R Series Protected Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. Basic thermostat is protected from the environment by sealing it in a metal housing or encapsulating it in epoxy.

Reset type:	Automatic
Amperage capacity:	15 A resistive, 12 Vdc
Housing material:	Brass, aluminium, stainless steel and epoxy
Operating temperature range:	15 °C to 130 °C [59 °F to 266 °F]
Environmental exposure range:	-40 °C to 155 °C [-40 °F to 311 °F]

SERIES NAME
2450R Protected Thermostat
2455R Protected Thermostat

2450R Series Fully Sealed Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product.

Reset type:	Automatic
Amperage capacity:	15 A resistive, 12 Vdc
Housing material:	Phenolic housing, aluminium cap totally encapsulated in water-resistant epoxy
Operating temperature range:	-10 °C to 55 °C [14 °F to 131 °F]
Environmental exposure range:	-40 °C to 130 °C [-40 °F to 266 °F]
Life cycle capability:	300 K at 12 Vdc, 10 A
Low temperature differential:	Down to 8 °C [46 °F]
Switch temperature tolerance:	±3 °C

Thermostats - Precision

Precision snap-action thermostats include both hermetic and non-hermetic devices for use in a wide array of applications including computers, copy machines, aircraft, radar equipment, medical equipment and electronic control systems. We also offer custom-packaged thermostats for application flexibility and industrial-grade thermostats designed to operate in extreme environmental conditions.

NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

NOTICE

Limitations: Type 3455RM/3450CM is intended as a manual reset control. It is not to be used on applications where a limit thermostat is required unless backup protection is provided. Units have been tested by UL for 1,000 cycles under load, 5,000 cycles no load, and are not considered limit devices.

⚠ WARNING PERSONAL INJURY

Do not use the bi-metallic, snap action thermostat components as final safety devices in any application. Their intended use is to provide an electrical disruption in the application circuit in the event of a change in temperature conditions.

Failure to comply with these instructions could result in death or serious injury.

3001/3004 Series Non-Hermetic Thermostats

The 3001/3004 Series are factory pre-set, single pole, single throw thermal switches available to open and close on temperature rise. The phenolic base is made dust-proof by a metal closure which also provides thermal and electrical isolation for the silver contacts. The low silhouette design of the 3001 Series makes it an excellent choice where a non-hermetic precision unit is required for tight tolerances. The 3004 Series offers a metal sleeve insert-rivet construction and higher spacing to meet European approval agency requirements. It is also UL recognized and CSA certified.

- Amperage:** 1 A to 3 A (3001, 3001U Series)* 2 A to 4 A (3004 Series)*
 - Housing material:** Phenolic base with metal closure
 - Operating temperature range:** -18 °C to 168 °C [0 °F to 335 °F]
 - Environmental exposure range:** -18 °C to 177 °C [0 °F to 350 °F]
 - Dielectric strength:** MIL-STD-202, Method 301
1500 Vac 60 Hz terminal to case (2000 Vac 3004)
 - Insulation resistance:** MIL-STD-202, Method 302, Cond. B
500 MOhm, 500 Vdc applied
 - Contact resistance:** MIL-STD-202, Method 307, 50 mOhm
 - Hermetic seal:** MIL-STD-202, Method 112, Cond. A, 1x10⁻⁵ atm cc/s
 - Moisture resistance:** MIL-STD-202, Method 106
- *Based on 240 Vac and life-cycle dependent. Call for further details.

- 3001U Series Non-Hermetic Thermostat
- 3004 Series Non-Hermetic Thermostat

3100/3106 Series Hermetic Thermostats

The 3100/3106 Series is a single pole, single throw switch activated by a snap-action bimetal disc. Temperature calibrations are pre-set at the factory and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically-sealed steel housing with a glass-to-metal seal at the terminal junction. It is manufactured and tested to meet or exceed critical commercial and industrial specifications. The 3106 Series has gold alloy contacts for low voltage applications.

Amperage:	0.5 A resistive (3106 Series) 7 A resistive (3100 Series)
Housing material:	Steel housing with glass-to-metal seal at terminal junction
Operating temperature range:	-29 °C to 260 °C [-20 °F to 500 °F] (3100 Series) -29 °C to 204 °C [-20 °F to 400 °F] (3106 Series)
Environmental exposure range:	-62 °C to 288 °C [-80 °F to 550 °F]
Dielectric strength:	MIL-STD-202, Method 301 1250 Vac 60 Hz terminal to case (3100, 3100U, 3106 Series) 1500 Vac 60 Hz terminal to case (3100UX Series)
Insulation resistance:	MIL-STD-202, Method 302, Cond. B 50 MOhm, 500 Vdc applied
Contact resistance:	MIL-STD-202, Method 307 25 mOhm (3106 Series) 50 mOhm (3100 Series)
Hermetic seal:	MIL-STD-202, Method 112, Cond. A 1x10 ⁻⁵ atm cc/s
Moisture resistance:	MIL-STD-202, Method 106

SERIES NAME

- 3100 Hermetic Thermostat
- 3100U Hermetic Thermostat
- 3100UX Hermetic Thermostat
- 3106 Hermetic Thermostat

3150/3156 Series Low Silhouette Hermetic Thermostats

The 3150/3156 Series is a single pole, single throw switch activated by a snap-action bimetal disc. Temperature calibrations are pre-set at the factory and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically-sealed steel housing with a glass-to-metal seal at the terminal junction. The low silhouette and compact design often make it especially well suited for applications that require miniaturization. The 3156 Series has gold alloy contacts for low voltage applications.

Amperage:	0.5 A resistive (3156 Series) 7 A resistive (3150 Series)
Housing material:	Steel housing with glass-to-metal seal at terminal junction
Operating temperature range:	-29 °C to 177 °C [-20 °F to 350 °F]
Environmental exposure range:	-62 °C to 260 °C [-80 °F to 500 °F]
Dielectric strength:	MIL-STD-202, Method 301 750 Vac 60 Hz terminal to case (3150, 3156 Series) 1250 Vac 60 Hz terminal to case (3150U, 3156U Series) 1500 Vac 60 Hz terminal to case (3150UX Series)
Insulation resistance:	MIL-STD-202, Method 302, Cond. B 50 MOhm, 500 Vdc applied
Contact resistance:	MIL-STD-202, Method 307 25 mOhm (3156 Series) 50 mOhm (3150 Series)
Hermetic seal:	MIL-STD-202, Method 112, Cond. A 1x10 ⁻⁵ atm cc/s
Moisture resistance:	MIL-STD-202, Method 106

3600/3601 Series TO-5 Thermal Switches

The 3600/3601 Series is a single pole, single throw, bimetal snap-action switch available to open or close on temperature rise. These devices are specifically designed and often suited for mounting on products such as printed circuit boards to protect against hazardous temperatures associated with the thermal density of components on backplanes, flexible circuitry and sophisticated time-based circuits.

Amperage:	1 A resistive
Housing material:	nickel
Operating temperature range:	40 °C to 120 °C [104 °F to 248 °F]
Environmental exposure range:	-50 °C to 150 °C [-58 °F to 302 °F]
Dielectric strength:	500 Vac 60 Hz for one second, terminal to case
Insulation resistance:	20 MOhm at 500 Vdc
Contact resistance:	60 MOhm
Hermetic seal:	1x10 ⁻³ atm cc/s

 3601 Series TO-5 Thermal Switch

3000 Series Custom-packaged Thermostats

The 3000 Series incorporates a Honeywell thermostat assembled in a custom package for use in a variety of applications that require flexibility in mounting and terminal configurations. A typical product includes a 3100 hermetic internal thermostat with a terminal selection, housing selection and customized part number. These custom package devices operate in many extreme environmental conditions, such as exposure to hazardous substances, dust particles and liquid immersion.

Amperage: 7 A resistive
Housing material: Stainless steel or brass
Operating temperature range: -29 °C to 260 °C [-20 °F to 500 °F]
Environmental exposure range: -62 °C to 288 °C [-80 °F to 550 °F]
Dielectric strength: MIL-STD-202, Method 301
 1250 Vac 60 Hz terminal to case

Insulation resistance: MIL-STD-202, Method 302
 50 MOhm to 500 MOhm
Contact resistance: MIL-STD-202, Method 307
 50 mOhm max.
Hermetic seal: MIL-STD-202, Method 112, Condition A
 1 x 10⁻⁵ atm cc/s
Moisture resistance: MIL-STD-202 Method 106

3800 Series Industrial-grade Thermostats for Severe Duty Applications

The 3800 Series is often used where high levels of vibration and mechanical shock are common but a military device is not required. It is easily customized for use in a variety of applications.

Amperage:	7 A resistive
Housing material:	Steel housing with glass-to-metal seal at terminal junction
Operating temperature range:	-29 °C to 260 °C [-20 °F to 500 °F]
Environmental exposure range:	-62 °C to 260 °C [-80 °F to 500 °F]
Dielectric strength:	MIL-STD-202, Method 301 1250 Vac terminal to case
Insulation resistance:	MIL-STD-202, Method 302, Cond. B 50 MOhm min. terminal to case
Contact resistance:	MIL-STD-202, Method 307 50 mOhm max.
Hermetic seal:	MIL-STD-202, Method 112, Cond. A 1 x 10 ⁻⁵ atm cc/s
Moisture resistance:	MIL-STD-202, Method 106
Vibration (random):	MIL-STD-202, Method 214 30 g, 20 Hz to 2,000 Hz
Vibration (sinusoidal):	MIL-STD-202, Method 204, Condition D 20 G, 20 Hz to 2,000 Hz
Mechanical shock:	MIL-STD-202, Method 213, 400 G
Thermal shock:	MIL-STD-202, Method 107, Cond. B
Acceleration:	MIL-STD-202, Method 212, 20 G

SERIES NAME
3800 Industrial Grade Thermostat

3450R/3450HR/3455R Series Phenolic Automatic Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product. These products are factory calibrated to the customer's specification.

Reset type:	Automatic
Amperage capacity:	15 A resistive max.
Housing material:	Phenolic
Operating temperature range:	0 °C to 150 °C [32 °F to 302 °F]
Environmental exposure range:	0 °C to 150 °C [32 °F to 302 °F]

3450CM/3455RM Series Ceramic and Phenolic Manual Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. The circuit will stay open above room ambient temperature until the manual reset button is pressed. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product.

Reset type:	Manual
Amperage capacity:	15 A resistive max.
Housing material:	Ceramic or phenolic
Operating temperature range:	52 °C to 232 °C [125 °F to 450 °F] (ceramic) 52 °C to 150 °C [125 °F to 302 °F] (phenolic)
Environmental exposure range:	10 °C to 260 °C [50 °F to 500 °F] (ceramic) 10 °C to 150 °C [50 °F to 302 °F] (phenolic)

High Amperage Custom Package Thermostats: Non-Hermetic Internal Thermostats Only

These custom designed Series 3000 packages include a non-hermetic non-adjustable, snap action 3450RC/3455RC thermostat. Performance characteristics are outlined elsewhere in this catalog. Housing material varies with customer requirements. Brass, stainless steel, and other materials are available. Customized wire, terminals and size may be designed to suit requirements.

Terminal/Bracket Orientations (Intermediate angles available on special request.)

3200 Series Aerospace

The 3200 Series is a single pole, single throw switch activated by a snap-action bimetal disc. Temperature calibrations are pre-set at the factory and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically sealed steel housing, with a glass-to-metal seal at the terminal junction. It is manufactured and tested to meet or exceed critical military and aerospace specifications for spaceflight use, including temperature stability, shock, vibration and cleanliness.

Amperage:	5 A resistive
Housing material:	Steel housing with glass-to-metal seal at terminal junction
Operating temperature range:	-51 °C to 163 °C [-60 °F to 325 °F]
Environmental exposure range:	-65 °C to 177 °C [-85 °F to 350 °F]
Dielectric strength:	MIL-STD-202, Method 301, 1250 Vac
Insulation resistance:	MIL-STD-202, Method 302, 500 MOhm
Contact resistance:	MIL-STD-202, Method 307, 0.025 Ohm max.
Hermetic seal:	MIL-STD-202, Method 112, Cond. C
Moisture resistance:	MIL-STD-202, Method 106
Shock:	MIL-STD-202, Method 213, 750 G
Vibration:	MIL-STD-202, Method 204, 30 G MIL-STD-202, Method 214, 50 G MIL-STD-202, Method 212, 20 G
Acceleration:	MIL-STD-202, Method 212, 20 G
Thermal shock:	MIL-STD-202, Method 107, Cond. B
Salt (1) spray:	MIL-STD-202, Method 101, Cond. B

SERIES NAME
3200 Series Aerospace

High Reliability thermostats are manufactured to meet the stringent requirements of the military and aerospace industries for dielectric strength, moisture resistance, vibration, shock and hermetic seal. They meet all domestic and international approvals, as well as appropriate military specifications (i.e., MIL-S-24236).

NOTE: The products in this section do not follow the “how to use this catalogue” instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

3MS1 QPL Series Military

The 3MS1 Series is a single pole, single throw switch activated by a snap-action bimetal disc. Temperature calibrations are pre-set at the factory, and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically sealed steel housing with a glass-to-metal seal at the terminal junction. It is qualified to MIL-S-24236 and is QPL listed for military applications.

Amperage:	5 A resistive
Housing Material:	Steel housing with glass-to-metal seal at terminal junction
Operating temperature range:	-46 °C to 190 °C [-50 °F to 375 °F]
Environmental exposure range:	-65 °C to 260 °C [-85 °F to 500 °F]
Dielectric strength:	MIL-STD-202, Method 301, 1250 Vac
Insulation resistance:	MIL-STD-202, Method 302, 500 MOhm
Contact resistance:	MIL-STD-202, Method 307, 0.050 Ohm max.
Hermetic seal:	MIL-STD-202, Method 112 Cond. C
Moisture resistance:	MIL-STD-202, Method 106
Shock:	MIL-STD-202, Method 213, 100 G
Vibration:	MIL-STD-202, Method 204, 20 G
Acceleration:	MIL-STD-202, Method 212, 20 G
Thermal shock:	MIL-STD-202, Method 107, Cond. B
Salt (1) spray:	MIL-STD-202, Method 101, Cond. B

3153 Series Low Silhouette

The 3153 Series is a single pole, single throw switch activated by a snap-action bimetal disc. Temperature calibrations are pre-set at the factory, and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically sealed steel housing, with a glass-to-metal seal at the terminal junction. The low silhouette and compact design often make it especially well-suited for applications that require miniaturization. Acceptance testing is performed in accordance with MIL-S-24236, Table III.

Amperage:	6 A resistive
Housing Material:	Steel housing with glass-to-metal seal at terminal junction
Operating temperature range:	-29 °C to 177 °C [-20 °F to 350 °F]
Environmental exposure range:	-65 °C to 260 °C [-85 °F to 500 °F]
Dielectric strength:	MIL-STD-202, Method 301, 1250 Vac
Insulation resistance:	MIL-STD-202, Method 302, 500 MOhm
Contact resistance:	MIL-STD-202, Method 307, 0.050 Ohm max.
Hermetic seal:	MIL-STD-202, Method 112, Cond. C
Moisture resistance:	MIL-STD-202, Method 106
Shock:	MIL-STD-202, Method 213, 100 G
Vibration:	MIL-STD-202, Method 204, 20 G
Thermal shock:	MIL-STD-202, Method 107, Cond. B

Combi-sensor

The Combi-sensor is a liquid pressure/temperature sensor that uses piezoresistive and thermistor sensing technology to measure water pressure and temperature. It is designed for use in boiler system water pressure and inflow temperature measurement applications.

Pressure range:	0 bar to 3.0 bar relative
Accuracy:	±2 % over full range
Response time:	<3 s
Operating temperature:	5 °C to 110 °C [41 °F to 203 °F]
Overpressure:	5 bar for 1 hour
Burst pressure:	9 bar for 1 min
Power supply:	5 Vdc ±10 %
Voltage output:	0.5 Vdc to 4.5 Vdc ratiometric to Vs
Maximum current limit:	250 mA (not self-limiting) (for reverse polarity)
NTC (Negative Temperature Coefficient) characteristics:	10 kOhm at 25 °C ±3 % beta(25/85) = 3998 K ±2 %
Connection:	Lumberg rast 2.5 edge connector ESL code 312-600

Heaters

Heaters are resistive devices that are used in a variety of applications such as airborne valves, appliances, satellites and medical electronics. They are available in flat, molded-to-shape, spiral wrap, transparent, composite and high temperature configurations. Honeywell uses a variety of materials to manufacture its heaters. These include silicone, which can easily be vulcanized to metal parts; Kapton®, noted for its thermal stability over a wide temperature range; as well as other flexible dielectric materials. Heaters are available with single, multiple or variable watt densities to customize heat output to unique application needs. They may also be bonded to other system parts or combined with Honeywell thermostats, thermistors, thermocouples, temperature sensors and thermal fuses to form custom-engineered heating systems. Optional PSA (Pressure Sensitive Adhesive) is available with all series.

NOTE: The products in this section do not follow the “how to use this catalogue” instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

3100 Series Silicone Wire-wound Heaters

The 3100 Series contains resistive wire encased between two layers of fiberglass-supported silicone rubber. All bonding adhesives are uncured silicone rubber. These heaters are cured under pressure and temperature during manufacturing. The multi-stranded resistance wires allow wire-wound heaters to conform to three dimensional shapes. Optional PSA (Pressure Sensitive Adhesive) is available with all series.

Maximum power: 40 W/in²
Operating/storage temperature range: 250 °C [482 °F] max.
 200 °C [392 °F] max. (UL)
Size constraints: None, virtually any size and shape
Geometry: Specific to customer requirements
Heater trace pattern: Specific to customer requirements

SERIES NAME
3100 Silicone Wire-wound Heater

3200 Series Silicone Chemically etched Heaters

The 3200 Series contains resistive foil traces encased between two layers of fiberglass-supported silicone rubber. All bonding adhesives are uncured silicone rubber. These heaters are cured under pressure and temperature during their manufacturing. They are often the optimal choice for multiple watt densities or varying trace geometry requirements.

Maximum power: 40 W/in²
Operating/storage temperature range: 250 °C [482°F] max.
 200 °C [392 °F] max. (UL)
Size constraints: 0,61 m x 0,61 m [24 in x 24 in]
Geometry: Specific to customer requirements
Heater trace pattern: Specific to customer requirements

SERIES NAME
3200 Silicone Chemically etched Heater

3400 Series Kapton® or High Temperature Insulated Heaters

The 3400 Series contains etched, resistive foil encased between two layers of Kapton. The Kapton Insulated Heaters use an acrylic thermoset bonding adhesive, while the Kapton Insulated High Temperature Heaters use a Teflon™ bonding adhesive. Insulated heaters are often used in applications where thin profile and or low material outgassing are important considerations.

- Maximum power:** 40 W/in²
- Operating/storage temp. range:**
- Kapton insulated: 177 °C [350 °F] max.
 - Kapton high temperature insulated: 260 °C [500 °F] max.
- Size constraints:** 0,61 m x 0,61 m [24 in x 24 in]
- Geometry:** Specific to customer requirements within size constraints
- Heater trace pattern:** Specific to customer requirements

SERIES NAME
3400 Kapton or High Temperature Insulated Heater

78000 Series Transparent Heaters

The 78000 Series heater resistive element consists of a very thin layer of ITO (Indium Tin Oxide) electrically sputtered on PET polyester film. The electrical connection is made via silver ink or carbon bus bars laid on top of the ITO. Wire connections are made via ring terminals eyeleted to the silver or carbon bus bars or flexible tail/connector. Transparent heaters are often used to warm liquid crystal displays (LCDs) in cold, moist environments.

- Maximum power:** 5 W/in²
- Operating/storage temp. range:** -40 °C to 85 °C [-40 °F to 185 °F]
- Size constraints:** 0,60 m x 0,43 m [22 in x 17 in]
- Geometry:** Specific to customer requirements within size constraints
- Heater trace pattern:** Continuous layer of ITO (Indium Tin Oxide) evenly sputtered across entire surface

SERIES NAME
78000 Transparent Heater

Magnetic Position Sensors

SS41/SS400 Series and SS51/SS500 Series Hall-effect Digital Position Sensors

The SS41/SS51 Series Bipolar Hall-effect Sensors offer reverse polarity protection, as well as a wide operating voltage and temperature range. The SS400/SS500 Series position sensors have a thermally balanced circuit over the full operating temperature range. The negative compensation slope is optimized to match the negative temperature coefficient of lower-cost magnets. Bipolar, latching, and unipolar magnetic types are available.

Supply voltage: 4.5 Vdc to 24 Vdc (SS41/SS51)
3.8 Vdc to 30 Vdc (SS400/SS500)

Operating temperature: -40 °C to 150 °C [-40 °F to 302 °F]

Honeywell's Solid State Position Sensor family includes digital and analog Hall-effect position sensors, magnetoresistive digital sensors, Hall-effect vane sensors, gear tooth sensors, Hall-effect basic switches, and magnets. Solid State Position Sensors promote reliability, high speed and long life and are directly compatible with other electronic circuits.

Position sensors are often used in applications which require accurate, reliable outputs. They are found in brushless dc motors, utility meters, welding equipment, vending machines, home appliances and computers.

SS490 Series Ratiometric Hall-effect Linear Position Sensors

Package style: Plastic radial lead IC
Supply voltage: 4.5 Vdc to 10.5 Vdc
Operating temperature: -40 °C to 150 °C [-40 °F to 302 °F]

SS94 Series Ratiometric Hall-effect Linear Position Sensors

The SS94 utilizes a Hall-effect integrated circuit chip which promotes increased temperature stability and performance. Laser-trimmed thick film resistors on the ceramic substrate and thin film resistors on the integrated circuit reduce null and gain shifts over temperature which results in consistent sensitivity from one device to the next

Package style: Ceramic
Operating temperature: -40 °C to 125 °C [-40 °F to 257 °F]
 -55 °C to 150 °C [-67 °F to 302 °F](SS94B1A only)

OPTIONS

Magnetic range: -420 Gauss to 420 Gauss

PACKAGE STYLE	REFERENCE
Radial lead IC	SS494B
Surface mount	SS494B-S
Surface mount reel	SS494B-SP

Magnetic range: -670 Gauss to 670 Gauss

PACKAGE STYLE	REFERENCE
Radial lead IC	SS495A
Radial lead IC	SS495A1
Surface mount	SS495A1-S

2SS Series Magnetoresistive Digital Position Sensors

2SS Series position sensors have magnetoresistive material integrated on silicon and encapsulated in a plastic package. The integrated circuit provides a digital output in response to very low magnetic fields.

Supply voltage: 3.8 Vdc to 30 Vdc
Operating temperature: -40 °C to 150 °C [-40 °F to 302 °F]
Maximum operating point: 25 Gauss
Minimum release point: 5 Gauss

Omnipolar

PACKAGE STYLE	REFERENCE
Radial lead IC	2SS52M
Surface Mount	2SS52M-S

SS552MT Series Surface-Mount Sensors

Package style: Surface mount
Supply voltage: 3.8 Vdc to 30 Vdc
Operating temperature: -40 °C to 150 °C [-40 °F to 302 °F]

PACKAGE STYLE	REFERENCE
Surface Mount	SS552MT

5SS Series Hall-effect Digital Position Sensors

5SS Series Hall-effect digital sensors detect a unipolar target and function as a magnetically operated solid state switch.

Package style: Threaded boss, quick-connect terminals
Operating temperature: -40 °C to 150 °C [-40 °F to 302 °F]
 -40 °C to 100 °C [-40 °F to 212 °F]
Output type: Sink

OPTIONS

Unipolar

SUPPLY VOLTAGE	OPERATE POINT	RELEASE POINT	REFERENCE
6 Vdc to 16 Vdc	34.0 mT [340 G] max.	3.0 mT [30 G] min.	513SS16
4.5 Vdc to 9.0 Vdc	40.0 mT [400 G] max.	5.7 mT [57 G] min.	55SS13

Bipolar

SUPPLY VOLTAGE	OPERATE POINT	RELEASE POINT	REFERENCE
6 Vdc to 16 Vdc	14.0 mT [140 G] max.	-14 mT [-140 G] min.	517SS16

6SS Series Hall-effect Digital Position Sensors

6SS Series position sensors act on unipolar targets, provide dual output and function as a magnetically operated solid state switch.

Package style: PCB DIP IC
Operating temperature: -40 °C to 150 °C [-40 °F to 302 °F]
 -40 °C to 100 °C [-40 °F to 212 °F]
Output type: Sink

SUPPLY VOLTAGE	OPERATE POINT	RELEASE POINT	REFERENCE
6 Vdc to 16 Vdc	49.5 mT [495 G] max.	5.0 mT [50 G] min.	613SS2
4.5 Vdc to 9.0 Vdc	57.5 mT [575 G] max.	8.2 mT [82 G] min.	65SS4

103SR Series Cylindrical Hall-effect Position Sensors

Hall-effect position sensors in a rugged aluminum housing. These position sensors meet NEMA 3, 3R, 12 and 13 sealing requirements.

Package style: Aluminum
Operating temperature: -40 °C to 100 °C [-40 °F to 212 °F]

Linear

MAGNETIC RANGE	SUPPLY VOLTAGE	SENSITIVITY @ 25 °C	REFERENCE
-670 to 670 Gauss	4.5 Vdc to 10.5 Vdc	3.125 mV/G	103SR19A-1

Unipolar

OPERATING POINT (MAX.)	RELEASE POINT (MIN.)	SUPPLY VOLTAGE	REFERENCE
400 Gauss	250 Gauss	4.5 Vdc to 24 Vdc	103SR13A-1
90 Gauss	45 Gauss	4.5 Vdc to 24 Vdc	103SR14A-1

Bipolar

OPERATING POINT (MAX.)	RELEASE POINT (MIN.)	SUPPLY VOLTAGE	REFERENCE
50 Gauss	-50 Gauss	4.5 Vdc to 24 Vdc	103SR17A-1

Bipolar latching

OPERATING POINT (MAX.)	RELEASE POINT (MIN.)	SUPPLY VOLTAGE	REFERENCE
50 Gauss	-50 Gauss	4.5 Vdc to 24 Vdc	103SR18A-1

SR3/SR4 Series Cylindrical Digital Position Sensors

The SR3 Series Hall-effect digital position sensors are enclosed in a plastic cylindrical housing and meet NEMA 3, 3R, 3S, 4, 4X, 12 and 13 requirements. The sensors are capable of operation at frequencies exceeding 100 Hz. The SR4 Series digital position sensors contain a magnetoresistive sensing element. The SR4 Series will typically sense either a north or south pole at a level of 15 Gauss.

Package style: Plastic - PBT
Operating temperature: -40 °C to 85 °C [-40 °F to 185 °F]

OPTIONS

Bipolar

OPERATING POINT (MAX.)	RELEASE POINT (MIN.)	SUPPLY VOLTAGE	REFERENCE
90 Gauss	-90 Gauss	4.5 Vdc to 24 Vdc	SR3B-A1

Unipolar

OPERATING POINT (MAX.)	RELEASE POINT (MIN.)	SUPPLY VOLTAGE	REFERENCE
150 Gauss	-50 Gauss	4.5 Vdc to 24 Vdc	SR3C-A1
400 Gauss	185 Gauss	4.5 Vdc to 24 Vdc	SR3F-A1
350 Gauss	260 Gauss	4.5 Vdc to 24 Vdc	SR3G-A1

Omnipolar

OPERATING POINT (MAX.)	RELEASE POINT (MIN.)	SUPPLY VOLTAGE	REFERENCE
25 Gauss	5 Gauss	3.8 Vdc to 30 Vdc	SR4P3-A1

SR13 Series Hall-effect Digital Position Sensors

SR13 series Hall-effect digital position sensors permit quick and easy sensor installation, with snap-in and flat mount sensor packages, and can house any of the present SS400 Series sensors or any similarly sized sensing elements.

Package style: Plastic snap-in
Supply voltage: 3.8 Vdc to 30 Vdc
Operating temperature: -40 °C to 150 °C [-40 °F to 302 °F]

OPTIONS

Maximum Operating Point and Minimum Release Point are specified @ 25 °C

Unipolar

OPERATING POINT (MAX.)	RELEASE POINT (MIN.)	REFERENCE
180 Gauss	75 Gauss	SR13C-A1
115 Gauss	20 Gauss	SR13D-A1
390 Gauss	235 Gauss	SR13F-A1

Bipolar latching

OPERATING POINT (MAX.)	RELEASE POINT (MIN.)	REFERENCE
85 Gauss	-85 Gauss	SR13R-A1

SR16 Series Cost-effective Digital Vane Sensors

SR16 Series competitively priced Hall-effect digital vane sensors contain an internal magnet and Hall-effect sensor mounted in a dual tower configuration.

Package style: Dual tower
Supply voltage: 3.8 Vdc to 30 Vdc
Operating temperature: -20 °C to 85 °C [-4 °F to 185 °F]

OPTIONS

Type J4

PACKAGE STYLE PCB/Molex 5557 connector
REFERENCE SR16C-J4

Type J6

PACKAGE STYLE Wire exit
REFERENCE SR16C-J6

Type N

PACKAGE STYLE PCB mount leads
REFERENCE SR16C-N

SR17 Series Cost-effective Digital Vane Sensors

SR17 Series competitively priced Hall-effect digital vane sensors are designed for position and speed sensing and are offered in a side-mount twin tower package.

Package style: Side looker mounting
Supply voltage: 3.8 Vdc to 30 Vdc
Operating temperature: -20 °C to 85 °C [-4 °F to 185 °F]

OPTIONS

Type J6

PACKAGE STYLE Side mount wire exit
REFERENCE SR17C-J6

Type J7

PACKAGE STYLE 41 in wire leads and connector

880	20	3.5 mW/cm ² min.	SE5470-004

Optoelectronics is the integration of optical principles and semiconductor electronics. Optoelectronic components are reliable, cost-effective sensors. Standard infrared emitting diodes (IREDs), IR detectors and assemblies are covered.

Infrared sensors are often used for presence sensing, motion sensing, position encoding, limit sensing, movement detection and counting.

Plastic package

T1, end-emitting - SEP8505/8705

Side-emitting - SEP8506/8706

Side-emitting - SEP8736

HOD Series Single Fiber Duplex Modules

The HOD Series allows full duplex communication over a single fiber link. These products may also be used where a dual fiber solution is neither possible nor economical. Each duplex module consists of one on-axis port and one off-axis port, each configured with the appropriate devices.

Link bandwidth: dc to 160 MHz
Link budgets: 2 km [1.24 miles] or greater
Operating temperature: 0 °C to 70 °C [32 °F to 158 °F]

Current Sensors

Closed Loop Current Sensors

Closed loop current sensors measure ac, dc and impulse currents over 0 A to 25 A, 0 A to 50 A, 0 A to 100 A, 0 A to 600 A and 0 A to 1200 A ranges. The CSN series is based on the Hall-effect principle and the null balance or zero magnetic flux method (feedback system). The magnetic flux in the sensor core is constantly controlled at zero. The amount of current required to balance zero flux is the measure of the primary current flowing through the conductor, multiplied by the ratio of the primary to secondary windings. This closed loop current is the output from the device and presents an image of the primary current reduced by the number of secondary turns at any time. This current can be expressed as a voltage by passing it through a resistor.

The CSN Series has a high overload capacity, a high level of electrical insulation between primary and secondary circuits and a rapid response rate. Lightweight and compact, and with no restriction on input current waveform, the sensors are often ideal for variable speed drives, power supplies, feedback control systems, robotics/welding equipment and general overcurrent protection.

Sensed current type: ac or dc
EMC: EN 50082-2, EN 50081-2
Accuracy: <0.5 %
Housing material: UL94-V0

Current sensors monitor ac or dc current. Included are adjustable linear, null balance, digital and linear current sensors.

Digital current sensors can sound an alarm, start a motor, open a valve or shut down a pump. The linear signal duplicates the waveform of the current being sensed, and can be used as a feedback element to control a motor or regulate the amount of work being done by a machine.

CSN Series Magnetostrictive (MR) Current Sensor

The CSN Series MR Current Sensor builds on patented Honeywell technology to offer superior sensor performance and accuracy in current measuring applications. There is virtually no offset drift over the entire operating temperature range. The sensor operates from a +5 V unipolar supply and has an accessible, internal 2.5 V voltage reference. The sensor can operate from either the internal voltage reference or an external voltage reference, thus enabling several sensors to be used without offset imbalance.

Mounting: PCB on 11 pins
Accuracy: $\pm 0.32\%$ @ $-40\text{ }^{\circ}\text{C}$ to $85\text{ }^{\circ}\text{C}$ [$-40\text{ }^{\circ}\text{F}$ to $185\text{ }^{\circ}\text{F}$]
Thermal drift of offset current: $< \pm 10\text{ }\mu\text{A}$ @ $-40\text{ }^{\circ}\text{C}$ to $85\text{ }^{\circ}\text{C}$ [$-40\text{ }^{\circ}\text{F}$ to $185\text{ }^{\circ}\text{F}$]
Internal reference voltage: +2.5 Vdc

CSNS Series Closed Loop Current Sensors

The CSNS Series closed loop current sensor offers a flexible solution for measuring currents up to ±600 A. These small sensors have a large primary through hole to accept either a cable or a variety of busbar sizes. The sensors can be mounted vertically or horizontally and come with connection options of integral Molex type connector or a flying lead. The sensors are closed loop devices and based on the principle of Hall effect and null balance method. The output from the current sensor is the balancing current that is the perfect image of the primary current reduced by the number of secondary turns at any time. The current can be expressed as a voltage by passing it through a load resistor.

Large-housed style

Mounting:

Panel (see order guide)

Sensed current range:

±1200 A

Coil turns:

5000 (50 Ohm coil)

Supply voltage:

±12 Vdc to ±18 Vdc

CONNECTOR	REFERENCE

Open Loop Current Sensors

CSL Series Linear Current Sensors

CSL Series linear current sensors incorporate our 91SS12-2 and SS94A1 linear output Hall-effect transducer (LOHET™). These sensors cover measuring ranges from 0 A to 950 A. The sensing element is assembled in a printed circuit board mountable housing. This housing is available in four configurations. Normal mounting is with 0.375 in long 4-40 screw and square nut (not provided) inserted in the housing or a 6-20 self-tapping screw. The combination of the sensor, flux collector and housing comprises the holder assembly. These sensors are ratiometric.

Sensed current type: ac or dc
Housing: PBT polyester

OPTIONS

PCB bottom mount

SENSED CURRENT RANGE	SUPPLY VOLTAGE	REFERENCE
0 A to 75 A	8 Vdc to 16 Vdc	CSLA1DE
0 A to 92 A	6 Vdc to 12 Vdc	CSLA2DE
0 A to 150 A	6 Vdc to 12 Vdc	CSLA2DG
0 A to 225 A	8 Vdc to 16 Vdc	CSLA1DJ
0 A to 225 A	6 Vdc to 12 Vdc	CSLA2DJ
0 A to 325 A	8 Vdc to 16 Vdc	CSLA1DK
0 A to 400 A	6 Vdc to 12 Vdc	CSLA2DK

CSL Series (continued)

NOTES

- 1 - Air gap in toroid is 1.90 (0.075)
- 2 - Gauss level in air gap is 6.0 to 7.0 Gauss per NI
- 3 - Recommended mounting is 4-40 square nut & 0.375 long 4,40 screw
- 4 - See 91SS12-2 for electrical characteristics
- 5 - Conventional current flow in direction indicated will cause an increase in hall voltage

CSD Series Digital Current Sensor

Each Honeywell CS Series digital current sensor provides a logic-level output that changes from approximately V_{supply} to 0.5 Vdc when the sensed current exceeds the operate point. Each digital sensor will sense ac or dc current, but when sensing ac current, the output will turn off at every zero crossing. Maximum current limited only by conductor size.

Housing: PET polyester
Operating temperature: -25 °C to 85 °C [-13 °F to 185 °F]

Liquid Level Sensors

Honeywell Liquid Level Sensors incorporate a voltage level switch which provides a digital output that denotes the presence or absence of liquid. The mode of operation is derived from the principle of total internal reflection. An LED and detector are housed within a plastic dome at the head of the device. When no liquid is present, all light from the LED is totally internally reflected from the dome boundary to the detector. When liquid covers the dome, the effective refractive index at the dome/liquid boundary changes, allowing some light from the LED to escape. Thus the amount of light received by the voltage level switch is reduced and the output switches, denoting the presence of liquid. This method of liquid level sensing is very fast and instantaneous for water.

Principle - in air

LLE Series Enhanced Liquid Level Sensor

The LLE Series enhanced liquid level sensors use a phototransistor trigger which provides a digital output that denotes the presence or absence of liquid. This series incorporates reverse polarity, over voltage, short circuit and transient protection.

- Termination:** 250 mm lead wires
- Supply voltage:** +5 Vdc to +12 Vdc
- Pressure range:** 0 bar to 5 bar (plastic housing)
0 bar to 25 bar (metal housing)
- Operating temperature:** -25 °C to 80 °C [-13 °F to 176 °F]
-40 °C to 125 °C [-40 °F to 257 °F] (high)
- Storage temperature:** -30 °C to 85 °C [-22 °F to 185 °F]
- Seal washer:** Vamac® or Nitrile rubber
- Output function:** High in air

LLN Series Industrial Liquid Level Sensors

The LLN Series industrial liquid level sensors are designed for many harsh industrial environments with extremes in temperature, pressure, vibration and shock. The LLN Series has reverse polarity and overvoltage protection. Housed in stainless-steel, the LLN Series has long life and is easy to clean. The LLN Series terminates using industry standard quick-connect connectors.

Wiring diagram

Basic Switches

These listings include standard size basics, miniature and subminiature switches. The precision snap-action mechanisms are offered with a wide variety of actuators and operating characteristics. Basic switches are often ideal for applications requiring compactness, light weight, accurate repeatability and long life.

They are best used for presence/absence detection where physical contact with object is permissible. Very economical.

OPTIONS

Note: BA/BE plunger position distance from mounting hole = 19 mm [0.75 in]

BZ/BA/BM/BE Series Basic Switches

BZ/BA/BM/BE Series standard basic switches are used for simple or precision on/off application needs.

As well as the catalogue listings presented here, we offer other versions with higher temperature ratings, different termination options, different electrical ratings and Single Pole, Single Throw (SPST) circuitry. Refer to our Web site for details.

Voltage:	250 Vac

Turbidity Sensors

APMS-10 Series

The APMS-10 wash process sensor application kit includes the sensor, PC interface and the software required to apply the Honeywell wash process sensor in bath or other wet applications. Once installed, the kit enables the user to begin taking measurements of water quality. To run the wash process application, the user must supply a PC that meets the specified hardware requirements and an 8 Vdc to 30 Vdc power supply. Wash process sensors provide an integrated package of a microprocessor and sensing functions that measures turbidity, conductivity and/or temperature. Information from the sensor may be used in an adaptive control scheme to monitor and control the application process to help improve process quality and minimize consumption of energy, water, materials and time. Each of the sensing functions is conditioned by the internal microprocessor. All data transmitted to the host system is supplied by the microprocessor via a 5 Vdc custom communications protocol. The sensor operates in slave mode, waiting for the host system to request sensor information.

Supply voltage: 8 Vdc to 30 Vdc
Ratio range: 0 NTU to 4000 NTU
Output type: RS-232 Serial link, slave mode

Turbidity sensing provides a quick, practical indication of the relative amount of solids suspended in water or liquids. Conductivity sensing gives a relative measurement of the ionic concentration of a given liquid. Turbidity sensors can provide inputs to the control algorithms of dishwashers and clothes washers. Many industrial and commercial bath applications may make use of integrated turbidity and conductivity sensing to improve product quality, minimize ingredient consumptions and reduce waste water discharge.

Package style: Tank mount
Operating temperature: 20 °C to 60 °C [68 °F to 140 °F]

APMS-10 Kit specifications

REFERENCE
 APMS-10GRCF-KIT

APMS-11 Series

The Low NTU turbidity sensor application kit includes the sensor and installation instructions to apply the sensor in a bath or other wet applications. Once installed, the sensor enables the user to measure the relative amount of particulate in solution. To run the application, the user must supply a 5 Vdc power supply that meets the specified tolerance and solicits analog output from the output pin of the device. Low NTU turbidity sensors provide an integrated package of optic devices, amplification and trim potentiometer capability. This sensor may be used in an adaptive control scheme to monitor and control the wash process to help improve process quality and minimize consumption of energy, water, materials and time.

Supply voltage: 4.9 Vdc to 5.1 Vdc
Ratio range: 0 NTU to 600 NTU
Output type: 0 Vdc to 5 Vdc analog

REFERENCE

Honeywell

www.honeywell.com/sensing

Honeywell Sensing and Control designs, manufactures and markets the industry's most extensive line of sensing and control technologies available from a single switch or sensor manufacturer. You can trust Honeywell for developing the right products for your applications.

Warranty/Remedy

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell's standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective.

The foregoing is buyer's sole remedy and is in lieu of all warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.

Sales and Service

Honeywell serves its customers through a worldwide network of sales offices, representatives and distributors. For application assistance, current specifications, pricing or name of the nearest Authorized Distributor, contact your local sales office or:

Honeywell

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
