

## General Description

The MAX17270 evaluation kit (EV kit) evaluates the MAX17270. The MAX17270 is a 3-output switching regulator that regulates three outputs using a single, small 2.2µH inductor.

The MAX17270 EV kit features two independent circuits to evaluate two different IC packages of the MAX17270. Both circuits on the EV kit operate over an input range of 2.7V to 5.5V. Each circuit provides three jumper-configurable outputs, with voltages from 0.8V to 5V for each output channel. Each circuit output on the EV kit delivers up to 50mA/75mA/80mA of current depending on the input voltage to the output voltage ratio.

The EV kit comes with the MAX17270ETE+ and the MAX17270ENE+ installed.

## Features

- Two Independent Circuits on One Board
  - Evaluates the MAX17270 IC in a 16-pin TQFN
  - Evaluates the MAX17270 IC in a 4 x 4 Bump, 0.4mm Pitch WLP
- 2.7V to 5.5V Input Range
- 0.8V to 5V Configurable Output Voltage
- Up to 50mA/75mA/80mA Output Current
- Proven 4-Layer 1oz Copper PCB Layout
- Demonstrates Compact Solution Size
- Fully Assemble and Tested

**Ordering Information** appears at end of data sheet.

## Quick Start

### Required Equipment

- MAX17270 EV kit
- 2.7V to 5.5V, 1A DC power supply
- Electronic load capable of 100mA
- Digital voltmeter (DVM)

### Procedure

#### <<Testing the TQFN Circuit>>

The EV kit is fully assembled and tested. Follow the steps below to verify board operation.

**Caution: Do not turn on power supply until all connections are completed.**

- 1) Verify that jumpers JU1 to JU6 are in their default positions, as shown in [Table 1](#) through [Table 4](#).
- 2) Connect the 2.7V to 5.5V power supply between the IN1 and nearest PGND1 terminal posts.
- 3) Turn on the power supply and set the power supply output to 3V.
- 4) Verify that the output voltage at OUT1 and nearest PGND1 terminal posts is 1.0V.
- 5) Verify that the output voltage at OUT2 and nearest PGND1 terminal posts is 1.8V.
- 6) Verify that the output voltage at OUT3 and nearest PGND1 terminal posts is 3.3V.
- 7) Connect the electronic load between OUT1 and PGND1. Set the electronic load to 50mA
- 8) Enable the electronic load and verify that OUT1 is still 1.0V
- 9) Connect the electronic load between OUT2 and PGND1. Set the electronic load to 75mA
- 10) Enable the electronic load and verify that OUT2 is still 1.8V
- 11) Connect the electronic load between OUT3 and PGND1. Set the electronic load to 80mA
- 12) Enable the electronic load and verify that OUT3 is still 3.3V

**Procedure**

**<<Testing the WLP Circuit>>**

The EV kit is fully assembled and tested. Follow the steps below to verify board operation.

**Caution: Do not turn on power supply until all connections are completed.**

- 13) Verify that jumpers JU101 to JU106 are in their default positions, as shown in [Table 5](#) through [Table 8](#).
- 14) Connect the 2.7V to 5.5V power supply between the IN and nearest PGND terminal posts.
- 15) Turn on the power supply and set the power supply output to 3V.
- 16) Verify that the output voltage at OUT101 and nearest PGND terminal posts is 1.0V.
- 17) Verify that the output voltage at OUT102 and nearest PGND terminal posts is 1.8V.
- 18) Verify that the output voltage at OUT103 and nearest PGND terminal posts is 3.3V.
- 19) Connect the electronic load between OUT101 and PGND. Set the electronic load to 50mA.
- 20) Enable the electronic load and verify that OUT101 is still 1.0V.

- 21) Connect the electronic load between OUT102 and PGND. Set the electronic load to 75mA.
- 22) Enable the electronic load and verify that OUT102 is still 1.8V.
- 23) Connect the electronic load between OUT103 and PGND. Set the electronic load to 80mA.
- 24) Enable the electronic load and verify that OUT103 is still 3.3V.

**Detailed Description of Hardware**

The MAX17270 EV kit evaluates the MAX17270. The MAX17270 is a 3-output switching regulator that regulates three outputs using a single, small 2.2µH inductor.

The MAX17270 EV kit features two independent circuits to evaluate two different IC packages of the MAX17270, the 16-pin TQFN and the 4x4 bump, 0.4mm pitch, WLP. Both circuits on the EV kit operates over an input voltage range of 2.7V to 5.5V. Each circuit provides three output channels. Each output channel provides an output with a jumper-configurable voltage from 0.8V to 5V. Each circuit output channel delivers up to 50mA/75mA/80mA of current depending on the input voltage to the output voltage ratio.

The EV kit comes with the MAX17270ETE+ and the MAX17270ENE+ installed.

**Table 1. EN1–EN3 (JU1 – JU3) on MAX17270 (TQFN) Circuit**

1–2	R110 = 11.8k	2.5V	1A
1–3*	R111 = 8.45k	3.3V	1A
1–4	R112 = 0	5V	1A

\*Default position.

**Enable Function for the MAX17270ETE+ (TQFN) Circuit**

The MAX17270 (TQFN) circuit on the EV kit provides three jumpers JU1, JU2, and JU3 to individually enable or disable each output channel. Refer to [Table 1](#) for jumper setting of jumpers JU1, JU2, and JU3.

**Output Voltage Selection for the MAX17270ETE+ (TQFN) Circuit**

The MAX17270 (TQFN) circuit on the EV kit provides three jumpers JU4, JU5, and JU6 (RSEL1, RSEL2 and RSEL3) to configure the output voltage for each output channel. Refer to [Table 2](#), [Table 3](#), and [Table 4](#) for jumper setting of jumpers JU4, JU5, and JU6.

**Enable Function for the MAX17270ENE+ (WLP) Circuit**

The MAX17270 (WLP) circuit on the EV kit provides three jumpers JU101, JU102, and JU103 to individually enable or disable each output channel. Refer to [Table 5](#) for jumper setting of jumpers JU101–JU103.

**Ordering Information**

PART	TYPE
MAX17270EVKIT#	EV Kit

#Denotes RoHS compliant.

**Output Voltage Selection for the MAX17270ENE+ (WLP) Circuit**

The MAX17270 (WLP) circuit on the EV kit provides three jumpers JU104, JU105, and JU106 (RSEL101, RSEL102, and RSEL103) to configure the output voltage for each output channel. Refer to [Table 6](#), [Table 7](#), and [Table 8](#) for jumper setting of jumpers JU104, JU105, and JU106.

**Spare Inductors**

The MAX17270 EV kit provides spare inductors on the PCB's bottom side. The spare inductors can be used to reconfigure the EV kit output current ratings.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
