 <p>The graph shows the Drain-Source Breakdown Voltage (BV_{DSS}) in Volts (V) on the y-axis (ranging from 600 to 850) versus the TJ Junction Temperature in degrees Celsius (°C) on the x-axis (ranging from -55 to 150). The curve shows a positive correlation, starting at approximately 630V at -55°C and rising to about 815V at 150°C.</p>	 <p>The graph shows the Drain Current (I_D) in Amperes (A) on the y-axis (ranging from 0 to 80) versus the Gate-To-Source Voltage (V_{GS}) in Volts (V) on the x-axis (ranging from 0 to 8). Two curves are shown for different temperatures: 25°C and 150°C. The 25°C curve shows a higher drain current for a given gate voltage compared to the 150°C curve, indicating a decrease in transconductance with increasing temperature.</p>
