

## GPIO ICs Series

# Key Encoder IC

## BU1851GUW

No.09098EAT03

### ●Description

Key Encoder IC can monitor up to 8x8 matrix (64 keys), which means to be adaptable to Qwerty keyboard. We adopt the architecture that the information of the only key which status is changed, like push or release, is encoded into the 8 bits data. This can greatly reduce the CPU load which tends to become heavier as the number of keys increase. (Previously, all key's status is stored in the registers.)

Furthermore, auto sleep function contribute to low power consumption, when no keys are pressed. It is also equipped with the various functions such as ghost key rejection, N-key Rollover, Built-in power on reset and oscillator.

### ●Features

- 1) Monitor up to 64-matrix keys
- 2) Under 5 $\mu$ A Stand-by Current
- 3) Built-in Power On Reset
- 4) Ghost key rejection

### ●Absolute maximum ratings

(Ta=25°C)

Item	Symbol	Value	Unit	comment
Supply Voltage <sup>*1</sup>	VDD	-0.3 ~ +4.5	V	
Input voltage	VI	-0.3 ~ VDD +0.3 <sup>*1</sup>	V	
Storage temperature range	Tstg	-55 ~ +125	°C	
Package power	PD	272 <sup>*2</sup>	mW	

This IC is not designed to be X-ray proof.

<sup>\*1</sup> It is prohibited to exceed the absolute maximum ratings even including +0.3 V.

<sup>\*2</sup> Package dissipation will be reduced each 2.72mW/°C when the ambient temperature increases beyond 25°C.

### ●Operating Conditions

Item	Symbol	Limit			Unit	Condition
		Min	Typ	Max		
Supply voltage range (VDD)	VDD	2.20	3.30	3.60	V	
Input voltage range	V <sub>IN</sub>	-0.2	-	VDD+0.2	V	
Operating temperature range	Topr	-30	25	+85	°C	
External clock	Fclk	0.8	1.0	1.2	MHz	CLKSEL=VDD
External resistor	Rxi	118.8	120	121.2	k $\Omega$	To Xi pin, when CLKSEL=VSS

## ● Pin-out Functional Descriptions

PIN name	I/O	Function	Init	Cell Type
VDD	-	Power supply (Core, I/O)	-	-
VSS	-	GND	-	-
XRST	I	Reset (Low Active)	I	A
CLKSEL	I	H: External clock is used L: Internal CR oscillator is used	I	B
XI	I	External clock input when "CLKSEL" is H. 120kΩ is attached up to VDD when "CLKSEL" is L.	I	G
XO	O	Test pin <sup>1</sup>	L	C
KINT	O	Key Interrupt	H	C
KSCL	I	Clock for serial interface	I	A
KSDA	I/O	Serial data inout for serial interface	I	D
ROW0	I	Row input from key matrix (Pull-up)	I Pull-up	E
ROW1	I			
ROW2	I			
ROW3	I			
ROW4	I			
ROW5	I			
ROW6	I			
ROW7	I			
COL0	O	Column output to key matrix	L	C
COL1	O			
COL2	O			
COL3	O			
COL4	O			
COL5	O			
COL6	O			
COL7	O			
PORENB	I	Power on reset enable (Low Active)	I	B
TESTM0	I	Test Pin <sup>2</sup>	I	F
TESTM1	I			
TESTM2	I			
TESTM3	I			

<sup>1</sup>Note: This pin must be open in normal operation.

<sup>2</sup>Note: All these pins must be tied down to GND in normal operation.

Fig.4 Equivalent IO circuit diagram

## ● Functional Description

### 1. Power mode

The device enters the state of Power Down when XRST="Low". When XRST=High after powered, the device enters the standby state.

#### Power On Reset

A Power On Reset logic is implemented in this device. Therefore, it will operate correctly even if the XRST port is not used. In this case, the XRST port must be connected to high (VDD), and the PORENB port must be connected to low (VSS). If you don't want to use Power On reset, you must connect PORENB port to high (VDD).

#### Power Down State

The device enters Power Down state by XRST="Low". An internal circuit is initialized, and key encoding and 3wire interface are invalid. Power On Reset becomes inactive during this state.

#### Stand-by State

The device enters the stand-by state by setting XRST to "High". In this state, the device is waiting for keys pressed. When a key is pressed, the state will change to operation. Power On Reset is active in this state if PORENB = low.

#### Operating State

The device enters the operating state by pressing keys. The device will scan the key matrix and encode the key code, and then the 3wire interface tries to start communication by driving KINT "Low". See sec.2 for the details. After communicating with host device, when no keys are pressed, the device returns to the stand-by state. Power On Reset is active in this state if PORENB=low.

### 2. 3wire Interface

Fig.5 Protocol

Figure 5 shows the protocol of BU1851. BU1851 protocol basically consists of 3 wire configuration (KINT, KSCL, and KSDA) as shown above. Note that this 3wire interface is completely different from I2C and other standard bus interface.

#### Procedure

1. When BU1851 detects key events, KINT interrupt is generated to host with driving Low.
2. After the host detects KINT interrupt, the host is supposed to send start bit.
3. After BU1851 detects start bit, the 8bit data (key code) transmission on KSDA will start synchronized with the rising edge of KSCL clock signal, which is sent from the host.
4. 8 bit data are followed by "0" (9<sup>th</sup> bit is always "0"), and then BU1851 drives High on KINT line.

#### timeout

Fig.6 shows the 3wire timeout sequence. It is suppose to happen when Host doesn't response anything in a certain time.

1. bu1851 generates KINT interrupt.
2. But Host doesn't response within 500ms.
3. BU1851 stops KINT, and tries to communicate again by generating KINT.
4. BU1851 will go into the stand-by state when the communication fails five times.

Fig.6 3wire timeout

See also "3wire interface AC characteristics".

## 3. Key code Assignment

Table 1 shows the key code assignment. These key codes are sent through KSDA line corresponding to the pushed or released keys as indicated in section 2.

Table.1 Key code

		ROW0	ROW1	ROW2	ROW3	ROW4	ROW5	ROW6	ROW7

COL7	M	0x08	0x18	0x28	0x38	0x48	0x58	0x68	0x78
	B	0x88	0x98	0xA8	0xB8	0xC8	0xD8	0xE8	0xF8

M: Make Key (the code when the key is pressed)

B: Break Key (the code when the key is released)

4. Ghost Key Rejection

Ghost key is an inevitable phenomenon as long as key-switch matrices are used. When three switches located at the corners of a certain matrix rectangle are pressed simultaneously, the switch that is located at the last corner of the rectangle (the ghost key) also appears to be pressed, even though the last key is not pressed. This occurs because the ghost key switch is electrically shorted by the combination of the other three switches (Fig.7). Because the key appears to be pressed electrically, it is impossible to distinguish which key is the ghost key and which key is pressed. The BU1851 solves the ghost key problem to use the simple method. If BU1851 detects any three-key combination that generates a fourth ghost key, and BU1851 does not report anything, indicating the ghost keys are ignored. This means that many combinations of three keys are also ignored when pressed at the same time. Applications requiring three-key combinations (such as <Ctrl><Alt><Del>) must ensure that the three keys are not wired in positions that define the vertices of a rectangle (Fig. 8). There is no limit on the number of keys that can be pressed simultaneously as long as the keys do not generate ghost key events.

Fig.7 Ghost key phenomenon

Fig.8 Valid three key combinations

● 3wire Interface AC characteristics

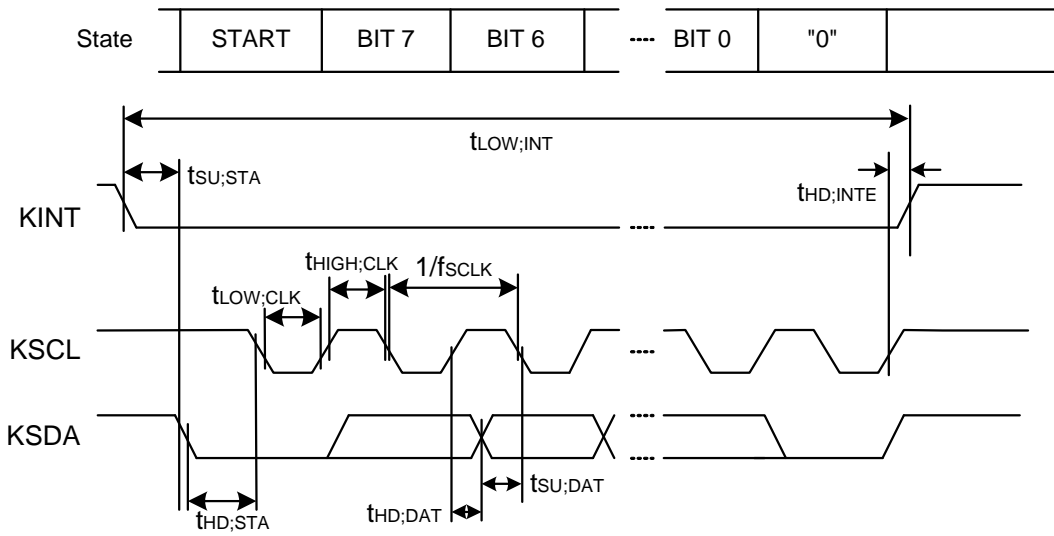

Fig.9 3wire interface AC timing

VDD=3.30V, Topr=25°C, CLKSEL=H (Sysclk = External Clock)

Item	Symbol	Min	Typ	Max	Unit	Condition
KSCL Clock Frequency	$f_{SCLK}$	-	-	21.5	kHz	
START Condition Setup Time	$t_{SU,STA}$	0.030	-	500	ms	
START Condition Hold Time	$t_{HD,STA}$	20	-	-	$\mu$ s	
KSCL Low Time	$t_{LOW,CLK}$	23	-	-	$\mu$ s	
KSCL High Time	$t_{HIGH,CLK}$	23	-	-	$\mu$ s	
Data Setup Time	$t_{SU,DAT}$	$t_{HIGH,CLK} - (1/Sysclk) \times 12$	-	$t_{HIGH,CLK} - (1/Sysclk) \times 10$	$\mu$ s	
Data Hold Time	$t_{HD,DAT}$	$(1/Sysclk) \times 10$	-	$(1/Sysclk) \times 12$	$\mu$ s	
KINT End Hold Time	$t_{HD,INTE}$	$(1/Sysclk) \times 3$	-	$(1/Sysclk) \times 5$	$\mu$ s	
KINT Low Time	$t_{LOW,INT}$	500	-	1200	ms

# Notice

## Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment <sup>(Note 1)</sup>, transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - Installation of protection circuits or other protective devices to improve system safety
  - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
  - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - Sealing or coating our Products with resin or other coating materials
  - Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

**Precautions Regarding Application Examples and External Circuits**

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

**Precaution for Electrostatic**

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

**Precaution for Storage / Transportation**

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

**Precaution for Product Label**

QR code printed on ROHM Products label is for ROHM's internal use only.

**Precaution for Disposition**

When disposing Products please dispose them properly using an authorized industry waste company.

**Precaution for Foreign Exchange and Foreign Trade act**

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

**Precaution Regarding Intellectual Property Rights**

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:
2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

**Other Precaution**

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

**General Precaution**

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
