ecoSWITCH™ Advanced Load Management

Controlled Load Switch with Low R_{ON}

The NCP45541 load switch provides a component and area-reducing solution for efficient power domain switching with inrush current limit via soft-start. In addition to integrated control functionality with ultra low on-resistance, this device offers system monitoring via power good signaling. This cost effective solution is ideal for power management and hot-swap applications requiring low power consumption in a small footprint.

Features

- Advanced Controller with Charge Pump
- Integrated N-Channel MOSFET with Low R_{ON}
- Input Voltage Range 0.5 V to 13.5 V
- Soft-Start via Controlled Slew Rate
- Adjustable Slew Rate Control
- Power Good Signal
- Extremely Low Standby Current
- Load Bleed (Quick Discharge)
- This is a Pb-Free Device

Typical Applications

- Portable Electronics and Systems
- Notebook and Tablet Computers
- Telecom, Networking, Medical, and Industrial Equipment
- Set-Top Boxes, Servers, and Gateways
- Hot-Swap Devices and Peripheral Ports

Table 1. PIN DESCRIPTION

Pin	Name	Function
1, 13	V _{IN}	Drain of MOSFET (0.5 V – 13.5 V), Pin 1 must be connected to Pin 13
2	EN	NCP45541-H – Active-high digital input used to turn on the MOSFET, pin has an internal pull down resistor to GND
		NCP45541-L – Active-low digital input used to turn on the MOSFET, pin has an internal pull up resistor to V _{CC}
3	V _{CC}	Supply voltage to controller (3.0 V – 5.5 V)
4	GND	Controller ground
5	SR	Slew rate adjustment; float if not used
6	PG	Active-high, open-drain output that indicates when the gate of the MOSFET is fully driven, external pull up resistor ≥ 1 kΩ to an external voltage source required; tie to GND if not used.
7	BLEED	Load bleed connection, must be tied to V _{OUT} either directly or through a resistor ≤ 100 MΩ
8	NC	No connect, internally floating but pin may be tied to V _{OUT}
9–12	V _{OUT}	Source of MOSFET connected to load

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. PG is an open-drain output that requires an external pull up resistor ≥ 1 kΩ to an external voltage source.
2. Surface-mounted on FR4 board using 1 sq-in pad, 1 oz Cu.
3. Surface-mounted on FR4 board using the minimum recommended pad size, 1 oz Cu.
4. Tested by the following methods @ T_A = 25°C:
ESD Human Body Model tested per JESD22-A114
ESD Charged Device Model per ESD STM5.3.1
Latch-up Current tested per JESD78
5. Rating is for all pins except for V_{IN} and V_{OUT} which are tied to the internal MOSFET's Drain and Source. Typical MOSFET ESD performance for V_{IN} and V_{OUT} should be expected and these devices should be treated as ESD sensitive.

APPLICATIONS INFORMATION

Enable Control

The NCP45541 has two part numbers, NCP45541-H and NCP45541-L, that only differ in the polarity of the enable control.

The NCP45541-H device allows for enabling the MOSFET in an active-high configuration. When the V_{CC} supply pin has an adequate voltage applied and the EN pin is at a logic high level, the MOSFET will be enabled. Similarly, when the EN pin is at a logic low level, the MOSFET will be disabled. An internal pull down resistor to ground on the EN pin ensures that the MOSFET will be disabled when not being driven.

The NCP45541-L device allows for enabling the MOSFET in an active-low configuration. When the V_{CC} supply pin has an adequate voltage applied and the EN pin is at a logic low level, the MOSFET will be enabled. Similarly, when the EN pin is at a logic high level, the MOSFET will be disabled. An internal pull up resistor to V_{CC} on the EN pin ensures that the MOSFET will be disabled when not being driven.

Power Sequencing

The NCP45541 devices will function with any power sequence, but the output turn-on delay performance may vary from what is specified. To achieve the specified performance, there are two recommended power sequences:

1. $V_{CC} \rightarrow V_{IN} \rightarrow V_{EN}$
2. $V_{IN} \rightarrow V_{CC} \rightarrow V_{EN}$

Load Bleed (Quick Discharge)

The NCP45541 devices have an internal bleed resistor, R_{BLEED} , which is used to bleed the charge off of the load to ground after the MOSFET has been disabled. In series with the bleed resistor is a bleed switch that is enabled whenever the MOSFET is disabled. The MOSFET and the bleed switch are never concurrently active.

It is required that the BLEED pin be connected to V_{OUT} either directly (as shown in Figure 28) or through an external resistor, R_{EXT} (as shown in Figure 27). R_{EXT} should not exceed 100 M Ω and can be used to increase the total bleed resistance and decrease the load bleed rate.

Care must be taken to ensure that the power dissipated across R_{BLEED} is kept at a safe level. The maximum

continuous power that can be dissipated across R_{BLEED} is 0.4 W. R_{EXT} can be used to decrease the amount of power dissipated across R_{BLEED} .

Power Good

The NCP45541 devices have a power good output (PG) that can be used to indicate when the gate of the MOSFET is fully charged. The PG pin is an active-high, open-drain output that requires an external pull up resistor, R_{PG} , greater than or equal to 1 k Ω to an external voltage source, V_{TERM} , compatible with input levels of other devices connected to this pin (as shown in Figures 27 and 28).

The power good output can be used as the enable signal for other active-high devices in the system (as shown in Figure 29). This allows for guaranteed by design power sequencing and reduces the number of enable signals needed from the system controller. If the power good feature is not used in the application, the PG pin should be tied to GND.

Slew Rate Control

The NCP45541 devices are equipped with controlled output slew rate which provides soft start functionality. This limits the inrush current caused by capacitor charging and enables these devices to be used in hot swap applications.

The slew rate can be decreased with an external capacitor added between the SR pin and ground (as shown in Figures 27 and 28). With an external capacitor present, the slew rate can be determined by the following equation:

$$\text{Slew Rate} = \frac{K_{SR}}{C_{SR}} \text{ [V/s]} \quad (\text{eq. 1})$$

where K_{SR} is the specified slew rate control constant, found in Table 4, and C_{SR} is the slew rate control capacitor added between the SR pin and ground. The slew rate of the device will always be the lower of the default slew rate and the adjusted slew rate. Therefore, if the C_{SR} is not large enough to decrease the slew rate more than the specified default value, the slew rate of the device will be the default value. The SR pin can be left floating if the slew rate does not need to be decreased.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
