

# Input/Output Rail-to-Rail Low Supply Current CMOS Operational Amplifier for Automotive

## BU7244YFV-C

### General Description

BU7244YFV-C is an input/output rail-to-rail CMOS operational amplifier that operates on a wide temperature range and low supply current. It is suitable for a sensor amplifier and battery-powered equipment which require low input bias current.

### Features

- AEC-Q100 Qualified<sup>(Note 1)</sup>
  - Input/Output Rail-to-Rail
  - Low Operating Supply Voltage
  - Low Supply Current
  - Low Input Bias Current
  - Wide Operating Temperature Range
- <sup>(Note 1)</sup> Grade 1

### Applications

- Sensor Amplifiers
- Battery-powered Equipment
- Automotive Electronics

### Key Specifications

- Operating Supply Voltage Range
  - Single Supply: 1.8 V to 5.5 V
  - Dual Supply:  $\pm 0.90$  V to  $\pm 2.75$  V
- Operating Temperature Range:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
- Supply Current: 360  $\mu\text{A}$  (Typ)
- Input Offset Current: 1 pA (Typ)
- Input Bias Current: 1 pA (Typ)

### Special Characteristic

- Input Offset Voltage  
 $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ : 12 mV (Max)

### Package

SSOP-B14

W(Typ) x D(Typ) x H(Max)

5.00 mm x 6.40 mm x 1.35 mm

### Pin Configuration

### Pin Description

Pin No.	Pin Name	Function
1	OUT1	Output 1
2	IN1-	Inverting input 1
3	IN1+	Non-inverting input 1
4	VDD	Positive power supply
5	IN2+	Non-inverting input 2
6	IN2-	Inverting input 2
7	OUT2	Output 2
8	OUT3	Output 3
9	IN3-	Inverting input 3
10	IN3+	Non-inverting input 3
11	VSS	Negative power supply/Ground
12	IN4+	Non-inverting input 4
13	IN4-	Inverting input 4
14	OUT4	Output 4

## Block Diagram

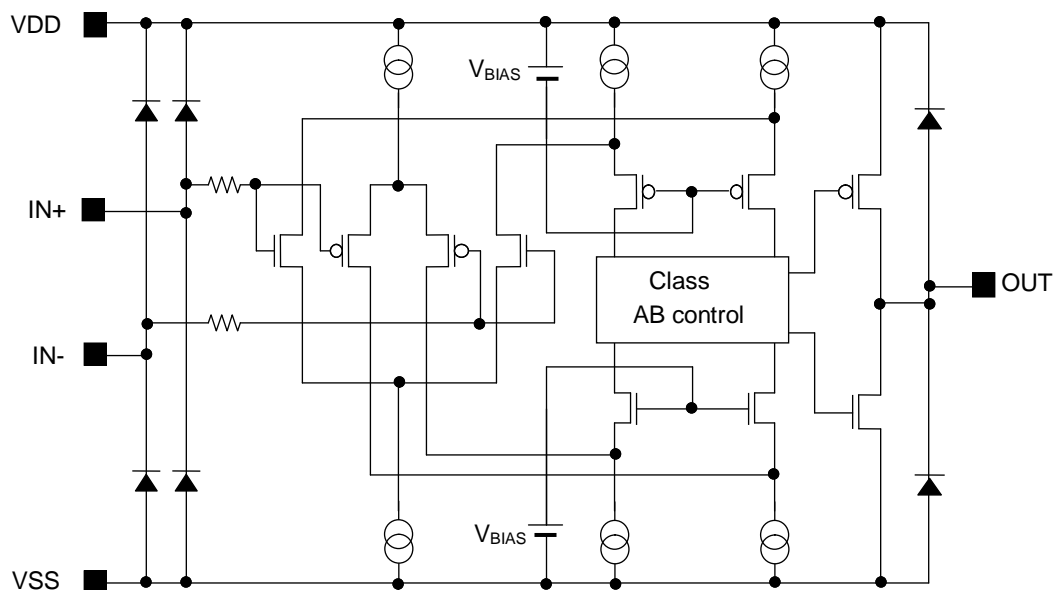

Figure 1. Block Diagram

## Absolute Maximum Ratings (Ta=25 °C)

Parameter	Symbol	Rating	Unit
Supply Voltage	$V_{DD}-V_{SS}$	7	V
Power Dissipation	$P_d$	0.87 <sup>(Note 2,3)</sup>	W
Differential Input Voltage <sup>(Note 4)</sup>	$V_{ID}$	$V_{DD} - V_{SS}$	V
Common-mode Input Voltage Range	$V_{ICM}$	$(V_{SS} - 0.3) \text{ to } (V_{DD} + 0.3)$	V
Input Current	$I_I$	$\pm 10$	mA
Storage Temperature Range	$T_{stg}$	-55 to +150	°C
Maximum Junction Temperature	$T_{jmax}$	150	°C

**Caution 1:** Operating the IC over the absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is operated over the absolute maximum ratings.

**Caution 2:** Should by any chance the maximum junction temperature rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. In case of exceeding this absolute maximum rating, design a PCB with power dissipation taken into consideration by increasing board size and copper area so as not to exceed the maximum junction temperature rating.

(Note 2) To use at temperature above Ta=25 °C reduce 7.0 mW/°C.

(Note 3) Mounted on an FR4 glass epoxy PCB 70 mm×70 mm×1.6 mm (Copper foil area less than 3 %).

(Note 4) The differential input voltage indicates the voltage difference between inverting input and non-inverting input.  
The input pin voltage is set to more than VSS.

## Recommended Operating Conditions

Parameter	Symbol	Min	Typ	Max	Unit
Operating Supply Voltage	$V_{opr}$	1.8 $\pm 0.90$	3.0 $\pm 1.5$	5.5 $\pm 2.75$	V
Operating Temperature	$T_{opr}$	-40	+25	+125	°C

**Electrical Characteristics** (Unless otherwise specified  $V_{DD}=3\text{ V}$ ,  $V_{SS}=0\text{ V}$ ,  $T_a=25\text{ }^{\circ}\text{C}$ )

Parameter	Symbol	Temperature Range	Limit			Unit	Conditions
			Min	Typ	Max		
Input Offset Voltage <sup>(Note 5,6)</sup>	$V_{IO}$	25 °C	-	1	10	mV	$V_{DD}=1.8\text{ V}$ to $5.5\text{ V}$
		Full range	-	-	12		
Input Offset Current <sup>(Note 5)</sup>	$I_{IO}$	25 °C	-	1	-	pA	-
Input Bias Current <sup>(Note 5,6)</sup>	$I_B$	25 °C	-	1	300	pA	-
		Full range	-	-	6000	pA	-
Supply Current <sup>(Note 6)</sup>	$I_{DD}$	25 °C	-	360	750	$\mu\text{A}$	$R_L=\infty$ , $A_V=0\text{ dB}$ , $V_{IN+}=1.5\text{ V}$
		Full range	-	-	1200		
Maximum Output Voltage (High) <sup>(Note 6)</sup>	$V_{OH}$	25 °C	$V_{DD}-0.05$	-	-	V	$R_L=10\text{ k}\Omega$
		Full range	$V_{DD}-0.10$	-	-		
Maximum Output Voltage (Low) <sup>(Note 6)</sup>	$V_{OL}$	25 °C	-	-	$V_{SS}+0.05$	V	$R_L=10\text{ k}\Omega$
		Full range	-	-	$V_{SS}+0.10$		
Large Signal Voltage Gain <sup>(Note 6)</sup>	$A_V$	25 °C	70	100	-	dB	$R_L=10\text{ k}\Omega$
		Full range	65	-	-		
Common-mode Input Voltage Range	$V_{ICM}$	25 °C	0	-	3	V	-
Common-mode Rejection Ratio	CMRR	25 °C	45	70	-	dB	-
Power Supply Rejection Ratio	PSRR	25 °C	60	80	-	dB	-
Output Source Current <sup>(Note 6,7)</sup>	$I_{SOURCE}$	25 °C	4	10	-	mA	$V_{OUT}=V_{DD}-0.4\text{ V}$
		Full range	2	-	-		
Output Sink Current <sup>(Note 6,7)</sup>	$I_{SINK}$	25 °C	5	15	-	mA	$V_{OUT}=V_{SS}+0.4\text{ V}$
		Full range	3	-	-

Gain Bandwidth Product	GBW	25 °C	-	1	-	MHz	$C_L=25\text{ pF}$ , $A_V=40\text{ dB}$
Phase Margin	$\theta$	25 °C	-	50	-	deg	$C_L=25\text{ pF}$ , $A_V=40\text{ dB}$
Total Harmonic Distortion + Noise	THD+N	25 °C	-	0.05	-	%	$V_{OUT}=0.8\text{ V}_{P-P}$ , $f=1\text{ kHz}$
Channel Separation	CS	25 °C	-	100	-	dB	$A_V=40\text{ dB}$ , $V_{OUT}=1\text{ V}_{rms}$

(Note 5) Absolute value

(Note 6) Full range:  $T_a=-40\text{ }^{\circ}\text{C}$  to  $+125\text{ }^{\circ}\text{C}$ 

(Note 7) Consider the power dissipation of the IC under high temperature environment when selecting the output current value.

When the output pins are short-circuited continuously, the output current may decrease due to the temperature rise by the heat generation of inside the IC.

## Description of Terms in Electrical Characteristics

Described below are descriptions of the relevant electrical terms used in this datasheet. Items and symbols generally used are also shown. Note that item names and symbols, and their meanings may differ from those on another manufacturer's or general documents.

### 1. Absolute Maximum Ratings

Absolute maximum rating items indicates the condition which must not be exceeded even if it is instantaneous. Applying of a voltage exceeding the absolute maximum ratings or use outside the temperature range which is provided in the absolute maximum ratings cause characteristic deterioration or destruction of the IC.

#### 1.1 Supply Voltage ( $V_{DD}/V_{SS}$ )

This indicates the maximum voltage that can be applied between the positive power supply pin and the negative power supply pin without deteriorating the characteristics of internal circuit or without destroying it.

#### 1.2 Differential Input Voltage ( $V_{ID}$ )

This indicates the maximum voltage that can be applied between the non-inverting input pin and the inverting input pin without deteriorating the characteristics of the IC or without destroying it.

#### 1.3 Common-mode Input Voltage Range ( $V_{ICM}$ )

This indicates the maximum voltage that can be applied to the non-inverting input pin and inverting input pin without deteriorating the characteristics of the IC or without destroying it. Common-mode Input Voltage Range of the maximum ratings does not assure normal operation of IC. For normal operation, use the IC within the Common-mode Input Voltage Range characteristics.

#### 1.4 Power Dissipation (Pd)

This indicates the power that can be consumed by the IC when mounted on a specific board at the ambient temperature 25 °C (normal temperature). As for package product, Pd is determined by the temperature that can be permitted by the IC in the package (maximum junction temperature) and the thermal resistance of the package.

### 2. Electrical Characteristics

#### 2.1 Input Offset Voltage ( $V_{IO}$ )

This indicates the voltage difference between non-inverting and inverting pins. It can be translated as the input voltage difference required for setting the output voltage at 0 V.

#### 2.2 Input Offset Current ( $I_{IO}$ )

This indicates the difference of input bias current between the non-inverting and inverting pins.

#### 2.3 Input Bias Current ( $I_B$ )

This indicates the current that flows into or out from the input pin. It is defined by the average of input bias currents at the non-inverting and inverting pins.

#### 2.4 Supply Current ( $I_{DD}$ )

This indicates the current of the IC itself flowing under the specified conditions and under no-load or steady-state conditions.

#### 2.5 Maximum Output Voltage (High) / Maximum Output Voltage (Low) ( $V_{OH}/V_{OL}$ )

This indicates the voltage range of the output under specified load condition. It is typically divided into maximum output voltage High and low. Maximum output voltage high indicates the upper limit of output voltage. Maximum output voltage low indicates the lower limit.

#### 2.6 Large Signal Voltage Gain ( $A_V$ )

This indicates the amplifying rate (gain) of output voltage against the voltage difference between non-inverting pin and inverting pin. It is normally the amplifying rate (gain) with reference to DC voltage.

$$A_V = (\text{Output voltage}) / (\text{Differential input voltage})$$

#### 2.7 Common-mode Input Voltage Range ( $V_{ICM}$ )

This indicates the input voltage range where IC normally operates.

#### 2.8 Common-mode Rejection Ratio (CMRR)

This indicates the ratio of fluctuation of input offset voltage when Common-mode Input Voltage is changed. It is normally the fluctuation of DC.

$$\text{CMRR} = (\text{Change of Input common-mode voltage}) / (\text{Input offset fluctuation})$$

#### 2.9 Power Supply Rejection Ratio (PSRR)

This indicates the ratio of fluctuation of input offset voltage when supply voltage is changed.

It is normally the fluctuation of DC.

$$\text{PSRR} = (\text{Change of power supply voltage}) / (\text{Input offset fluctuation})$$

#### 2.10 Output Source Current/ Output Sink Current ( $I_{SOURCE} / I_{SINK}$ )

The maximum current that can be output from the IC under specific output conditions. The output source current indicates the current flowing out from the IC, and the output sink current indicates the current flowing into the IC.

#### 2.11 Slew Rate (SR)

This is a parameter representing the operational speed of the operational amplifier. This indicates the rate at which the output voltage can change in the specified unit time.

#### 2.12 Gain Band Width (GBW)

This indicates the product of an arbitrary frequency and its gain in the range of the gain slope of 6 dB/octave.

#### 2.13 Phase Margin ( $\theta$ )

This indicates the margin of phase from the phase delay of 180 degree at the frequency at which the gain of the operational amplifier is 1.

#### 2.14 Total Harmonic Distortion+Noise (THD+N)

This indicates the content ratio of harmonic and noise components relative to the output signal.

## Application Information – continued

## 1. Unused Circuits

When there are unused op-amps, it is recommended that they are connected as in Figure 33, set the non-inverting input pin to a potential within the Common-mode Input Voltage Range ( $V_{ICM}$ ).

Figure 33. Example of Application Circuit for Unused Op-amp

## 2. Input Voltage

Applying  $V_{SS}-0.3V$  to  $V_{DD}+0.3V$  to the input pin is possible without causing deterioration of the electrical characteristics or destruction. However, this does not ensure normal circuit operation. Note that the circuit operates normally only when the input voltage is within the common mode input voltage range of the electric characteristics.

## 3. Power Supply (Single/Dual)

The operational amplifier operates when the voltage supplied is between the VDD and VSS pin. Therefore, the single supply operational amplifiers can be used as dual supply operational amplifiers as well.

## 4. Latch-up

Do not set the voltage of the input/output pin to  $V_{DD}$  or more and  $V_{SS}$  or less because there is a possibility of latch-up state peculiar to the CMOS device. Also, be careful that the abnormal noise and etc. are not added to the IC.

## 5. Decoupling Capacitor

Insert the decoupling capacitance between VDD and VSS, for stable operation of operational amplifier. If a decoupling capacitor is not inserted, malfunction may occur due to power supply noise.

## 6. Start-up the Supply Voltage

This IC has ESD protection diode between input pin and the VDD and VSS pin. When apply the voltage to input pin before start-up the supply voltage, then a current flows in VDD or VSS pin through this diode. The current is depending on applied voltage. This phenomena causes breakdown the IC or malfunction. Therefore, give a special consideration to input pin protection and start-up order of supply voltage.

Also, after turning on the power supply, this IC outputs High level voltage regardless of the state of input up to around 1 V of the start-up voltage of the circuit. Pay attention to the sequence of turning on the power supply and the etc., because there is a possibility of the set malfunction.

## 7. Output Capacitor

When the VDD pin is shorted to the VSS(GND) potential with the electric charge accumulated in the external capacitor connected to the output pin, the accumulated electric charge passes through the parasitic element or protective element inside the circuit and is discharged to the VDD pin, the elements inside the circuit may be damaged.(Thermal destruction)

If use this IC as an application circuit which does not cause the oscillation phenomenon due to output capacitive load (e.g., a voltage comparator not constituting a negative feedback circuit), the capacitor connected to the output pin should be 0.1  $\mu F$  or less in order to prevent the damage of IC due to accumulated charge of it.

## Application Information – continued

## 8. Oscillation by Output Capacitor

When designing an application circuit which constitutes a negative feedback circuit using this IC, check sufficiently about oscillation by capacitive load.

When the amplifier is used with a full feedback loop, a capacitive load must be up to 100 pF because there is a risk of oscillation.

The following figures show the frequency characteristics for each load capacitance.

Figure 34. Voltage Gain vs Frequency  
( $V_{DD}=3.0$  V,  $G_V=40$  dB)

Figure 35. Voltage Gain vs Frequency  
( $V_{DD}=3.0$  V,  $G_V=0$  dB)

( $V_{DD}=3.0$  V,  $G_V=40$  dB)

Figure 37. Phase Margin vs Load Capacitance  
( $V_{DD}=3.0$  V,  $G_V=0$  dB)

### 8. Oscillation by Output Capacitor – continued

The following figure shows an improved circuit example of the frequency characteristics due to the output capacitor.

Figure 38. Improvement Circuit Example 1

Figure 39. Improvement Circuit Example 2

Figure 40. Voltage Gain vs Frequency  
( $V_{DD}=3.0$  V,  $G_V=0$  dB,  $C_L=100$  pF, Circuit: Figure38)

Figure 41. Voltage Gain vs Frequency  
( $V_{DD}=3.0$  V,  $G_V=0$  dB,  $C_L=100$  pF, Circuit: Figure39)

## Examples of Circuit

## ○Voltage Follower

Figure 42. Voltage Follower Circuit

Using this circuit, the output voltage ( $V_{OUT}$ ) is configured to be equal to the input voltage ( $V_{IN}$ ). This circuit also stabilizes the output voltage ( $V_{OUT}$ ) due to high input impedance and low output impedance. Computation for output voltage ( $V_{OUT}$ ) is shown below.

$$V_{OUT} = V_{IN}$$

## ○Inverting Amplifier

Figure 43. Inverting Amplifier Circuit

For inverting amplifier, input voltage ( $V_{IN}$ ) is amplified by a voltage gain and depends on the ratio of  $R_1$  and  $R_2$ . The out-of-phase output voltage is shown in the next expression

$$V_{OUT} = -(R_2/R_1)V_{IN}$$

This circuit has input impedance equal to  $R_1$ .

## ○Non-inverting Amplifier

Figure 44. Non-inverting Amplifier Circuit

For non-inverting amplifier, input voltage ( $V_{IN}$ ) is amplified by a voltage gain, which depends on the ratio of  $R_1$  and  $R_2$ . The output voltage ( $V_{OUT}$ ) is in-phase with the input voltage ( $V_{IN}$ ) and is shown in the next expression.

$$V_{OUT} = (1 + R_2/R_1)V_{IN}$$

Effectively, this circuit has high input impedance since its input side is the same as that of the operational amplifier.

## Operational Notes

### 1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.

### 2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.

### 3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.

### 4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

### 5. Recommended Operating Conditions

The function and operation of the IC are guaranteed within the range specified by the recommended operating conditions. The characteristic values are guaranteed only under the conditions of each item specified by the electrical characteristics.

### 6. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.

### 7. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.

### 8. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

### 9. Unused Input Pins

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

### 10. Regarding the Input Pin of the IC

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.

### 11. Ceramic Capacitor

When using a ceramic capacitor, determine a capacitance value considering the change of capacitance with temperature and the decrease in nominal capacitance due to DC bias and others.

## Precaution on using ROHM Products

1. If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment <sup>(Note 1)</sup>, aircraft/spacecraft, nuclear power controllers, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - [a] Installation of protection circuits or other protective devices to improve system safety
  - [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure
3. Our Products are not designed under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
  - [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - [f] Sealing or coating our Products with resin or other coating materials
  - [g] Use of our Products without cleaning residue of flux (Exclude cases where no-clean type fluxes is used. However, recommend sufficiently about the residue.); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - [h] Use of the Products in places subject to dew condensation
4. The Products are not subject to radiation-proof design.
5. Please verify and confirm characteristics of the final or mounted products in using the Products.
6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse, is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
7. De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
8. Confirm that operation temperature is within the specified range described in the product specification.
9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

## Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

## Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

## Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

## Precaution for Product Label

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

## Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

## Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

## Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

## Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

**General Precaution**

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.

#### Как с нами связаться

**Телефон:** 8 (812) 309 58 32 (многоканальный)

**Факс:** 8 (812) 320-02-42
