

PIC32 GUI Development Board with Projected Capacitive (PCAP) Touch Information Sheet

Thank you for purchasing a PIC32 GUI Development Board with Projected Capacitive (PCAP) Touch, also referred to as the *PCAP Board*. This information sheet provides some important details that will help you successfully use the board as quickly as possible.

Additional information can be accessed at: <http://www.microchip.com>

Basic Requirements

The PCAP Board is a stand-alone solution that does not require a starter kit or a plug-in module (PIM) to run. The board uses a PIC32MX795F512L microcontroller to control the LCD using Low-Cost Controllerless (LCC) graphics. A capacitive sensing MTCH6301 microcontroller is also on the board to handle the PCAP sensing. The board uses a separate sensor for PCAP that is attached to the LCD.

As an alternate PCAP sensing method, an additional header (J6) on the board enables the use of an LCD with built-in PCAP sensing. It is assumed that an I²C interface will be used for communications. In this case, a driver would need to be added to the software to support this change.

For more information about LCC Graphics visit: <http://www.microchip.com/LCC>

Getting Started

To get started with the PCAP Board, follow these steps:

1. Ensure that MPLAB[®] IDE is installed.
2. Download a project file for the PCAP board from the Microchip website.
3. Power the PCAP board using a USB cable.
4. Connect a debugger/programmer using the PICKIT[™] header, J2.
5. Using MPLAB IDE, open the project that was previously downloaded.
6. Select a debugger/programmer in MPLAB IDE.
7. Click **Build**. This builds the downloaded project.
8. Click **Program all memories**.
9. Click **Run**.

Your PCAP Board should now be up and running. On the main screen, which will have a white background, there are icons of demonstrations to choose. These demonstrations showcase some of the features of LCC and the multi-touch features of PCAP.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
