

## 4-PLL ANY-FREQUENCY PRECISION CLOCK MULTIPLIER/JITTER ATTENUATOR

### Features

- Highly-integrated, 4 PLL clock multiplier/jitter attenuator
- Four independent DSPLLs support any-frequency synthesis and jitter attenuation
- 8 inputs/8 outputs
- Each DSPLL can generate any frequency from 2 kHz to 808 MHz from a 2 kHz to 710 MHz input
- Ultra-low jitter clock outputs: 350 fs rms (12 kHz–20 MHz) and 410 fs rms (50 kHz–80 MHz) typical
- Meets ITU-T G.8251 and Telcordia GR-253-CORE OC-192 jitter specifications
- Supports all ITU G.709 and any custom FEC ratios (239/237, 255/238, 255/237, 255/236, 253/226)
- Integrated loop filter with programmable bandwidth
- Simultaneous free-run and synchronous operation
- Automatic/manual hitless input clock switching
- Selectable output clock signal format (LVPECL, LVDS, CML, CMOS)
- LOL and interrupt alarm outputs
- I<sup>2</sup>C programmable
- Single 1.8 V  $\pm$ 5% or 2.5 V  $\pm$ 10% operation with high PSRR on-chip voltage regulator
- 10x10 mm PBGA

### Applications

- High-density, any-port, any-protocol, any-frequency line cards
- ITU-T G.709 OTN custom FEC
- 10/40/100G
- OC-48/192, STM-16/64
- 1/2/4/8/10G Fibre Channel
- GbE/10 GbE Synchronous Ethernet
- Carrier Ethernet, multi-service switches and routers
- MSPP, ROADM, P-OTS, muxponders

### Description

The Si5374 is a highly-integrated, 4-PLL, jitter-attenuating precision clock multiplier for applications requiring sub-1 ps jitter performance. Each of the DSPLL<sup>®</sup> clock multiplier engines accepts two input clocks ranging from 2 kHz to 710 MHz and generates two independent synchronous output clocks ranging from 2 kHz to 808 MHz. The device provides virtually any frequency translation combination across this operating range. For asynchronous, free-running clock generation applications, the Si5374's reference oscillator can be used as a clock source for any of the four DSPLLs. The Si5374 input clock frequency and clock multiplication ratio are programmable through an I<sup>2</sup>C interface. The Si5374 is based on Silicon Laboratories' third-generation DSPLL<sup>®</sup> technology, which provides any-frequency synthesis and jitter attenuation in a highly-integrated PLL solution that eliminates the need for external VCXO and loop filter components. Each DSPLL loop bandwidth is digitally-programmable, providing jitter performance optimization at the application level. The device operates from a single 1.8 or 2.5 V supply with on-chip voltage regulators with excellent PSRR. The Si5374 is ideal for providing clock multiplication and jitter attenuation in high-port-count optical line cards requiring independent timing domains.

**Notes:**

- $f_{\text{in}} = f_{\text{out}} = 622.08\text{ MHz}$ ; BW = 7 Hz; LVDS, OSC = .121.109 MHz.
- Lock and settle time performance is dependent on the frequency plan and the OSC\_P/OSC\_N reference frequency and LOCKT setting (see application note, "AN803: Lock and Settling Time Considerations for the Si5324/27/69/74 Any-Frequency Jitter Attenuating Clock ICs". Visit the Silicon Labs Technical Support web page at: <https://www.silabs.com/support/pages/contacttechnicalsupport.aspx> to submit a technical support request regarding the lock time of your frequency plan.
- LOCKT = 3.3 ms.

**Table 6. Thermal Characteristics**<sup>1,2</sup>

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Maximum Junction Temperature			—	125	—	°C
Thermal Resistance Junction to Ambient	$\phi_{JA}$	Still Air	—	16	—	°C/W
		Air Flow 1 m/s	—	14	—	
		Air Flow 2 m/s	—	13	—	
		Air Flow 3 m/s	—	12	—	
Thermal Resistance Junction to Case	$\phi_{JC}$	Still Air	—	3.4	—	°C/W

**Notes:**

1. In most circumstances the Si5374 does not require special thermal management. A system level thermal analysis is strongly recommend. Contact Silicon Labs applications for further details if required.
2. Thermal characteristic for the 80-pin Si5374 on an 8-layer PCB.

**Table 7. Absolute Maximum Ratings**

Parameter	Symbol	Value	Unit
DC Supply Voltage	$V_{DD}$	-0.5 to 2.8	V
LVC MOS Input Voltage	$V_{DIG}$	-0.3 to ( $V_{DD} + 0.3$ )	V
CLKINnP/N_q	$CKN_{VIN}$	0 to $V_{DD}$	V
OSC_P, OSC_N Voltage Limits	$OSC_{VIN}$	0 to 1.2	V
Operating Junction Temperature	$T_{JCT}$	-55 to 150	°C
Storage Temperature Range	$T_{STG}$	-55 to 150	°C
ESD HBM Tolerance (100 pF, 1.5 k); All pins except CKINnP/N-q		2	kV
ESD MM Tolerance; All pins except CKINnP/N_q		200	V
ESD HBM Tolerance (100 pF, 1.5 k); CKINnP/N_q		700	V
ESD MM Tolerance; CKINnP/N_q		125	V
Latch-Up Tolerance		JESD78 Compliant	

**Note:** Permanent device damage may occur if the absolute maximum ratings are exceeded. Functional operation should be restricted to the conditions as specified in the operation sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods of time may affect device reliability.

Figure 4. Functional Block Diagram

# Si5374

---

The Si5374 is a highly integrated jitter-attenuating clock multiplier that integrates four fully independent DSPLLs and provides ultra-low jitter generation with less than 410 fs RMS. Configuration and control of the Si5374 is mainly handled through the I<sup>2</sup>C interface. The device accepts clock inputs ranging from 2 kHz to 710 MHz and generates independent, synchronous clock outputs ranging from 2 kHz to 808 MHz for each DSPLL. Virtually any frequency translation (M/N) combination across its operating range is supported. The Si5374 supports a digitally programmable loop bandwidth that can range from 4 to 525 Hz requiring no external loop filter components. An external single-ended or differential reference clock or XO is required for the device to enable ultra-low jitter generation and jitter attenuation.

The device monitors each input clock for loss-of-signal (LOS) and provides a LOS alarm when missing pulses on any of the input clocks are detected. The device monitors the lock status of each DSPLL and provides a Loss-of-Lock (LOL) alarm when the DSPLL is unlocked. The lock detect algorithm continuously monitors the phase of the selected input clock in relation to the phase of the feedback clock. See application note, "AN803: Lock and Settling Time Considerations for the Si5324/27/69/74 Any-Frequency Jitter Attenuating Clock ICs."

The Si5374 provides a holdover capability that allows the device to continue generation of a stable output clock when the input reference is lost. The reference oscillator can be internally routed into CKIN2\_q, so free-running clock generation is supported for each DSPLL offering simultaneous synchronous and asynchronous operation.

The output drivers are configurable to support common signal formats, such as LVPECL, LVDS, CML, and CMOS loads. If the CMOS signal format is selected, each differential output buffer generates two in-phase CMOS clocks at the same frequency. For system-level debugging, a DSPLL bypass mode drives the clock output directly from the selected input clock, bypassing the internal DSPLL.

Silicon Laboratories offers a PC-based software utility, Si537xDSPLLsim that can be used to determine valid frequency plans and loop bandwidth settings to simplify device setup. Si537xDSPLLsim provides the optimum input, output, and feedback divider values for a given input frequency and clock multiplication ratio that minimizes phase noise. This utility can be downloaded from <http://www.silabs.com/timing>. For further assistance, refer to the Si53xx Any-Frequency Precision Clocks Family Reference Manual.

## 5. Si5374 Application Examples and Suggestions

### 5.1. Schematic and PCB Layout

For a typical application schematic and PCB layout, see the Si537x-EVB Evaluation Board User's Guide, which can be downloaded from [www.silabs.com/timing](http://www.silabs.com/timing).

In order to preserve the ultra low jitter of the Si5374 in applications where the four different DSPLL's are each operating at different frequency, special care and attention must be paid to the PCB layout. The following is a list of rules that should be observed:

1. The four Vdd supplies should be isolated from one another with four ferrite beads. They should be separately bypassed with capacitors that are located very close to the Si5374 device.
2. Use a solid and undisturbed ground plane for the Si5374 and all of the clock input and output return paths.
3. For applications that wish to logically connect the four RESET signals, do not tie them together underneath the BGA package. Instead connect them outside of the BGA footprint.
4. As much as is possible, do not route clock input and output signals underneath the BGA package. The clock output signals should go directly outwards from the BGA footprint.
5. Avoid placing the OSC\_P and OSC\_N signals on the same layer as the clock outputs. Add grounded guard traces surrounding the OSC\_P and OSC\_N signals.
6. Where possible, place the CKOUT and CKIN signals on separate PCB layers with a ground layer between them. The use of ground guard traces between all clock inputs and outputs is recommended.

For more information, see the Si537x-EVB Evaluation Board User's Guide and Appendix I of the Si53xx Reference Manual, Rev 0.5 or higher.

### 5.2. Thermal Considerations

The Si5374 dissipates a significant amount of heat and it is important to take this into consideration when designing the Si5374 operating environment. Among other issues, high die temperatures can result in increased jitter and decreased long term reliability. It is therefore recommended that one or more of the following occur:

1. Use a heat sink - A heat sink example is Aavid part number 375324B00035G.
2. Use a Vdd voltage of 1.8 V.
3. Limit the ambient temperature to significantly less than 85 °C.
4. Implement very good air flow.

### 5.3. SCL Leakage

When selecting pull up resistors for the two I<sup>2</sup>C signals, note that there is an internal pull down resistor of 18 kΩ from the SCL pin to ground. This comment does not apply to the SDA pin.

### 5.4. RSTL\_x Pins

It is recommended that the four RSTL\_x pins (RSTL\_A, RSTL\_B, RSTL\_C and RSTL\_D) be logically connected together such that all four DSPLLs are either in or out of reset mode. When a DSPLL is in reset mode, its VCO will not be locked to any signal and may drift across its operating range. If a drifting VCO has a frequency similar to that of an operating VCO, there could be some crosstalk between the two VCOs. To avoid this from occurring during device initialization, DSPLLsim loads each DSPLL with default Free Run frequency plans with VCO values apart from one another. If the four RSTL\_x pins are directly connected to one another, the connections should not be made directly underneath the BGA package. Instead, the connections should be made outside the package footprint.

### 5.5. Reference Oscillator Selection

Care should be taken during the selection of the external oscillator that is connected to the OSC\_P and OSC\_N pins. There is no jitter attenuation from the OSC reference inputs to the output; so, to achieve low output jitter, a low-jitter reference OSC must be used. Also, the output drift during holdover will be the same as the drift of the OSC reference. For example, a Stratum 3 application will require an OSC reference source that has Stratum 3 stability (though Stratum 3 accuracy is not required).

The OSC frequency can be any value from 109 to 125.5 MHz. See the RATE\_REG (reg 2) description. Alternately, for applications with less demanding jitter requirements, the OSC frequency can be in the range from 37 to 41 MHz. For applications that use Free Run mode, the freedom to use any OSC frequency within these bands can be used to select an OSC frequency that has an integer relationship to the desired output frequency, which will make it easier to find a high-performance frequency plan.

If Free Run is not being used, an OSC frequency that is not integer-related to the output frequency is preferred. A recommended choice for an external oscillator is the Silicon Labs 530EB121M109DG, which is a 2.5 V, LVPECL device with a temperature stability of 20 ppm. It was used to take the typical phase noise plot on page 14. For more details and a more complete discussion of these topics, see the Si53xx Reference Manual.

The very low loop BW of the Si5374 means that it can be susceptible to OSC\_P/OSC\_N reference sources

that have high wander. Experience has shown that in spite of having low jitter, some MEMS oscillators have high wander, and these devices should be avoided. Silicon Labs does not recommend using MEMS based oscillators as the Si5374 frequency reference. Contact Silicon Labs for details.

## 5.6. Alarms

To assist in the programming of the IRQ\_n pins, refer to the below diagram of the Si5374 alarm structure.

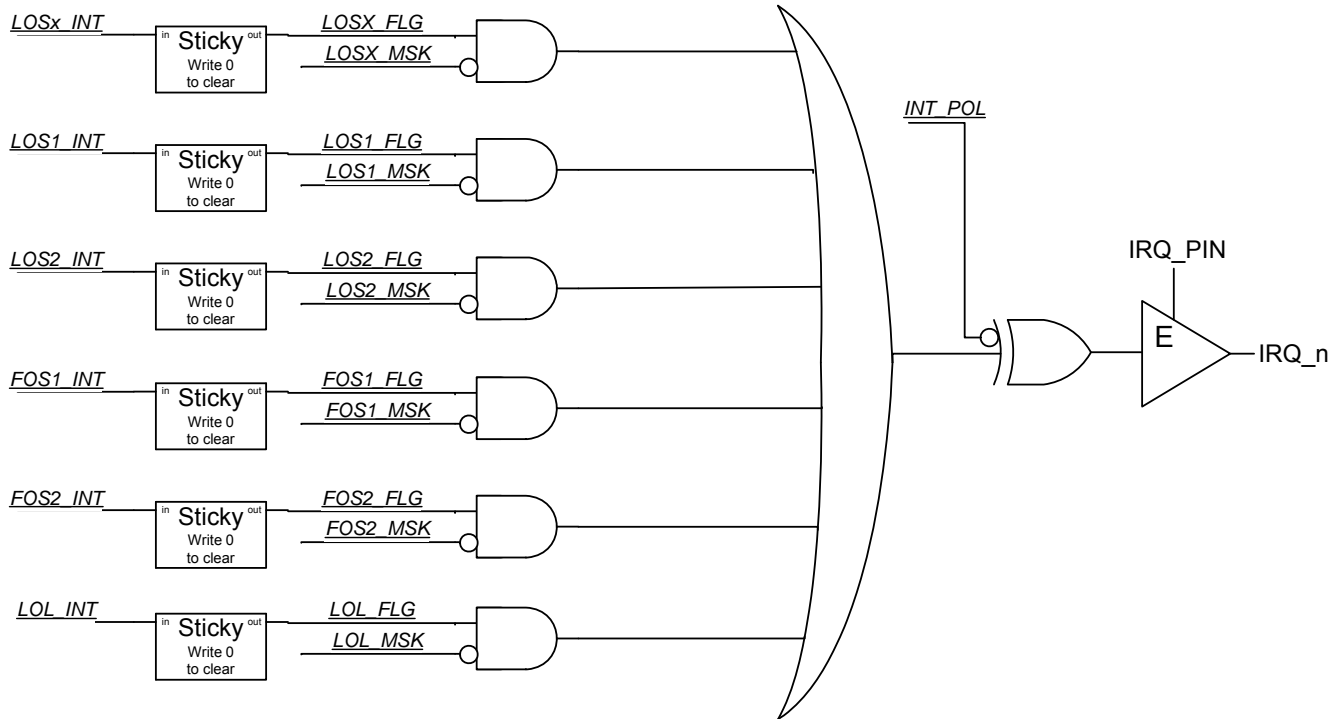

Figure 5. Si5374 Alarm Structure

## 5.7. OSC\_P and OSC\_N Connection

Figures 6, 7, and 8 show examples of connecting various OSC reference sources to the OSC\_P and

OSC\_N pins. A crystal may not be used in place of an external oscillator.

Figure 6. Differential OSC Reference Input Example for Si5374

Figure 7. Single-Ended OSC Reference Input Example for Si5374

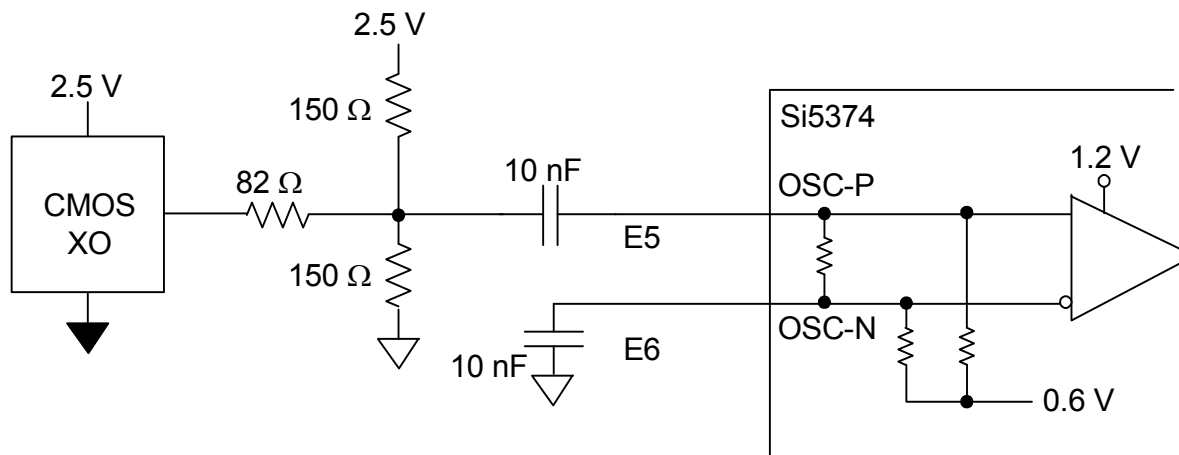

Figure 8. Single-Ended, 2.5 V, CMOS XO Connection

## 6. Register Map

The Si5374 has four identical register maps for each DSPLL. Each DSPLL has a unique I<sup>2</sup>C address enabling independent control and device configuration. The I<sup>2</sup>C address is 11010 [A1] [A0] for the entire device. Each corresponding DSPLL [A1] [A0] address is fixed as below.

	[A1]	[A0]
DSPLLA:	0	0
DSPLLB:	0	1
DSPLLC:	1	0
DSPLLD:	1	1

**Note:** The Si5374 register map is similar, but not identical, to the Si5324 device. All register bits that are not defined in this map should always be written with the specific reset values. Writing to these bits with values other than the specified reset values may result in undefined device behavior. Registers not listed, such as Register 64, should never be written to.

## 7. Register Descriptions

### Register 0.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Name		FREE_RUN	CKOUT_ALWAYS_ON				BYPASS_REG	
Type	R	R/W	R/W	R	R	R	R/W	R

Reset value = 0001 0100

Bit	Name	Function
7	Reserved	<b>Reserved.</b>
6	FREE_RUN	<p><b>Free Run.</b> Internal to the device, route XA/XB to CKIN2. This allows the DSPLL to lock to its XA-XB reference to support free-running clock generation. 0: Disable 1: Enable</p>
5	CKOUT_ALWAYS_ON	<p><b>CKOUT Always On.</b> This will bypass the SQ_ICAL function. Output will be available even if SQ_ICAL is on and ICAL is not complete or successful. See Table 9 on page 56. 0: Squelch output until device is calibrated (ICAL). 1: Provide an output. <b>Notes:</b> 1. The frequency may be significantly off until the device is calibrated. 2. Must be set to 1 to control output to output skew.</p>
4:2	Reserved	<b>Reserved.</b>
1	BYPASS_REG	<p><b>Bypass Register.</b> This bit enables or disables PLL bypass mode. Use only when the device is in digital hold or before the first ICAL. Bypass mode does not support CMOS clock outputs. 0: Normal operation 1: Bypass mode. Selected input clock is connected to CKOUT buffers, bypassing PLL.</p>
0	Reserved	<b>Reserved.</b>

**Register 1.**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>					CK_PRIOR2 [1:0]		CK_PRIOR1 [1:0]	
<b>Type</b>	R			R/W			R/W	

Reset value = 1110 0100

Bit	Name	Function
7:4	Reserved	
3:2	CK_PRIOR2 [1:0]	<b>2nd Priority Input Clock.</b> Selects which of the input clocks will be 2nd priority in the autoselection state machine. 00: CKIN1 is 2nd priority. 01: CKIN2 is 2nd priority. 10: Reserved 11: Reserved
1:0	CK_PRIOR1 [1:0]	<b>1st Priority Input Clock.</b> Selects which of the input clocks will be 1st priority in the autoselection state machine. 00: CKIN1 is 1st priority. 01: CKIN2 is 1st priority. 10: Reserved 11: Reserved

## Register 2.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	BWSEL_REG [3:0]				RATE_REG[3:0]			
<b>Type</b>	R/W				R/W			

Reset value = 0100 0010

Bit	Name	Function																				
7:4	BWSEL_REG [3:0]	<p><b>BWSEL_REG.</b></p> <p>Selects nominal f3dB bandwidth for PLL. See Si53xDSPLLsim for settings. After BWSEL_REG is written with a new value, an ICAL is required for the change to take effect.</p>																				
3:0	RATE_REG [3:0]	<p><b>RATE Setting for Oscillator.</b></p> <p>An external oscillator or other clock source must be used. It is not possible to use just a crystal.</p> <table border="1"> <thead> <tr> <th>Setting</th> <th>Minimum</th> <th><u>Recommended</u></th> <th>Maximum</th> <th>Units</th> </tr> </thead> <tbody> <tr> <td>0101</td> <td>37</td> <td>40</td> <td>41</td> <td>MHz</td> </tr> <tr> <td>0110</td> <td>109</td> <td>121.109</td> <td>125.5</td> <td>MHz</td> </tr> <tr> <td colspan="5">Others: Reserved</td> </tr> </tbody> </table>	Setting	Minimum	<u>Recommended</u>	Maximum	Units	0101	37	40	41	MHz	0110	109	121.109	125.5	MHz	Others: Reserved				
Setting	Minimum	<u>Recommended</u>	Maximum	Units

**Register 3.**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	CKSEL_REG[1:0]		DHOLD	SQ_ICAL				
<b>Type</b>	R/W		R/W	R/W	R	R	R	R

Reset value = 0000 0101

Bit	Name	Function
7:6	CKSEL_REG [1:0]	<p><b>CKSEL_REG.</b></p> <p>If the device is operating in register-based manual clock selection mode (AUTOSEL_REG = 00), and CKSEL_PIN = 0, then these bits select which input clock will be the active input clock. If CKSEL_PIN = 1 and AUTOSEL_REG = 00, the CS_CA input pin continues to control clock selection and CKSEL_REG is of no consequence.</p> <p>00: CKIN_1 selected.  01: CKIN_2 selected.  10: Reserved  11: Reserved</p>
5	DHOLD	<p><b>DHOLD.</b></p> <p>Forces the device into digital hold. This bit overrides all other manual and automatic clock selection controls.</p> <p>0: Normal operation.  1: Force digital hold mode. Overrides all other settings and ignores the quality of the input clocks.</p>
4	SQ_ICAL	<p><b>SQ_ICAL.</b></p> <p>This bit determines if the output clocks will remain enabled or be squelched (disabled) during an internal calibration. See Table 9 on page 56.</p> <p>0: Output clocks enabled during ICAL.  1: Output clocks disabled during ICAL.</p>
3:0	Reserved	

## Register 4.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	AUTOSEL_REG [1:0]			HIST_DEL [4:0]				
<b>Type</b>	R/W		R		R/W			

Reset value = 0001 0010

Bit	Name	Function
7:6	AUTOSEL_REG [1:0]	<b>AUTOSEL_REG [1:0].</b> Selects input clock selection control method. 00: Manual (either register or pin controlled, see CKSEL_PIN) 01: Automatic non-revertive 10: Automatic revertive 11: Reserved
5	Reserved	
4:0	HIST_DEL [4:0]	<b>HIST_DEL [4:0].</b> Selects amount of delay to be used in generating the history information used for Digital Hold.

## Register 5.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	ICMOS [1:0]							
<b>Type</b>	R/W		R	R	R	R	R	R

Reset value = 1110 1101

Bit	Name	Function
7:6	ICMOS [1:0]	<b>ICMOS [1:0].</b> When the output buffer is set to CMOS mode, these bits determine the output buffer drive strength. The first number below refers to 2.5 V operation; the second to 1.8 V operation. These values assume CKOUT+ is tied to CKOUT-. 00: 5 mA/1.75 mA 01: 10 mA/3.5 mA 10: 15 mA/5.5 mA 11: 20 mA/7.5 mA
5:0	Reserved	

**Register 6.**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>			SFOUT2_REG [2:0]			SFOUT1_REG [2:0]		
<b>Type</b>	R	R	R/W			R/W		

Reset value = 0010 1101

Bit	Name	Function
7:6	Reserved	
5:3	SFOUT2_REG [2:0]	<b>SFOUT2_REG [2:0].</b> Controls output signal format and disable for CKOUT2 output buffer. 000: Reserved 001: Disable CKOUT2 010: CMOS (Bypass mode not supported) 011: Low swing LVDS 100: Reserved 101: LVPECL (not available when $V_{DD} = 1.8\text{ V}$ ) 110: CML 111: LVDS

## Register 7.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Name						FOSREFSEL [2:0]		
Type	R	R	R	R	R	R/W		

Reset value = 0010 1010

Bit	Name	Function
7:3	Reserved	
2:0	FOSREFSEL [2:0]	<b>FOSREFSEL [2:0].</b> Selects which input clock is used as the reference frequency for Frequency offset (FOS) monitoring. 000: OSC (External reference) 001: CKIN1 010: CKIN2 011: Reserved 100: Reserved 101: Reserved 110: Reserved 111: Reserved

**Register 8.**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	HLOG_2[1:0]		HLOG_1[1:0]					
<b>Type</b>	R/W		R/W		R	R	R	R

Reset value = 0000 0000

Bit	Name	Function
7:6	HLOG_2 [1:0]	<b>HLOG_2 [1:0].</b> 00: Normal operation 01: Holds CKOUT2 output at static logic 0. Entrance and exit from this state will occur without glitches or runt pulses. 10: Holds CKOUT2 output at static logic 1. Entrance and exit from this state will occur without glitches or runt pulses. 11: Reserved
5:4	HLOG_1 [1:0]	<b>HLOG_1 [1:0].</b> 00: Normal operation 01: Holds CKOUT1 output at static logic 0. Entrance and exit from this state will occur without glitches or runt pulses. 10: Holds CKOUT1 output at static logic 1. Entrance and exit from this state will occur without glitches or runt pulses. 11: Reserved
3:0	Reserved	

**Register 9.**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	HIST_AVG [4:0]							
<b>Type</b>	R/W					R	R	R

Reset value = 1100 0000

Bit	Name	Function
7:3	HIST_AVG [4:0]	<b>HIST_AVG [4:0].</b> Selects amount of averaging time to be used in generating frequency history information for Digital Hold.
2:0	Reserved	

## Register 10.

Bit	D7	D6	D5	D4	D3	D2	D1	D0
Name					DSBL2_REG	DSBL1_REG		
Type	R	R	R	R	R/W	R/W	R	R

Reset value = 0000 0000

Bit	Name	Function
7:4	Reserved	
3	DSBL2_REG	<b>DSBL2_REG.</b> This bit controls the powerdown of the CKOUT2 output buffer. If disable mode is selected, the NC2 output divider is also powered down. 0: CKOUT2 enabled 1: CKOUT2 disabled
2	DSBL1_REG	<b>DSBL1_REG.</b> This bit controls the powerdown of the CKOUT1 output buffer. If disable mode is selected, the NC1 output divider is also powered down. 0: CKOUT1 enabled 1: CKOUT1 disabled
1:0	Reserved	

## Register 11.

Bit	D7	D6	D5	D4	D3	D2	D1	D0

Reset value = 0000 0000

Bit	Name	Function
7:0	INDEPENDENTSKEW1 [7:0]	<b>INDEPENDENTSKEW1.</b> Eight-bit field that represents a 2s complement of the phase offset in terms of clocks from the high speed output divider. Default = 0.

**Register 143.**

Bit	D7	D6	D5	D4	D3	D2	D1	D0
<b>Name</b>	INDEPENDENTSKEW2 [7:0]							
<b>Type</b>	R/W							

Reset value = 0000 0000

Bit	Name	Function
7:0	INDEPENDENTSKEW2 [7:0]	<b>INDEPENDENTSKEW2.</b> 8 bit field that represents a twos complement of the phase offset in terms of clocks from the high speed output divider. Default = 0.

## 7.1. ICAL

The device registers must be configured for the device operation. After device configuration, a calibration procedure must be performed once a stable clock is applied to the selected CKINn input. The calibration process is triggered by writing a “1” to bit D6 in register 136. See the Family Reference Manual for details. In addition, after a successful calibration operation, changing any of the registers indicated in Table 9 requires that a calibration be performed again by the same procedure (writing a “1” to bit D6 in register 136).

**Table 9. ICAL-Sensitive Registers**

Address	Register
0	BYPASS_REG
0	CKOUT_ALWAYS_ON
1	CK_PRIOR1
1	CK_PRIOR2
2	BSWEL_REG
2	RATE_REG
4	HIST_DEL
5	ICMOS
7	FOSREFSEL
9	HIST_AVG
10	DSBL1_REG
10	DSBL2_REG
11	PD_CK1
11	PD_CK2
19	FOS_EN
19	FOS_THR
19	LOCKT
19	VALTIME
25	N1_HS
31	NC1_LS
34	NC2_LS
40	N2_HS
40	N2_LS
43	N31
46	N32
55	CLKIN1RATE
55	CLKIN2RATE

Table 10. CKOUT\_ALWAYS\_ON and SQ\_ICAL Truth Table

CKOUT_ALWAYS_ON	SQ_ICAL	Results
0	0	CKOUT OFF until after the first ICAL
0	1	CKOUT OFF until after the first successful ICAL (i.e., when LOL is low)
1	0	CKOUT always ON, including during an ICAL
1	1	CKOUT always ON, including during an ICAL. Use these settings to preserve output-to-output skew

## 8. Pin Descriptions: Si5374

Bottom View

**Figure 9. Si5374 Pin Configuration (Bottom View)**

Table 11. Si5374 Pin Descriptions

Pin #	Pin Name	I/O	Signal Level	Description
D4 D6 F6 F4	RSTL_A RSTL_B RSTL_C RSTL_D	I	LVC MOS	<b>External Reset.</b> Active low input that performs external hardware reset of all four DSPLLs. Resets all internal logic to a known state and forces the device registers to their default value. Clock outputs are tri-stated during reset. The part must be programmed after a reset or power-on to get a clock output. This pin has a weak pull-up.
B4 D8 H6 F2	IRQ_A IRQ_B IRQ_C IRQ_D	O	LVC MOS	<b>DSPLLq Interrupt Indicator.</b> This pin functions as a device interrupt output. The interrupt output, <i>IRQ_PINn</i> must be set to 1. The pin functions as a maskable interrupt output with active polarity controlled by the <i>IRQ_POLn</i> register bit.  0 = CKINn present 1 = LOS (FOS) on CKINn The active polarity is controlled by <i>CK_BAD_POL</i> . If no function is selected, the pin tri-states.
C1, C4, B5 A7, D5, D7 E7, F5, G9 E3, F3, J3	VDD_A VDD_B VDD_C VDD_D	V <sub>DD</sub>	Supply	<b>Supply.</b> The device operates from a 1.8 or 2.5 V supply. A 0.1 μF bypass capacitive is required for every VDD_9 pin. Bypass capacitors should be associated with the following VDD_q pins: 0.1 μF per VDD pin. Four 1.0 μF should also be placed as close to each VDD domain as is practical. See recommended layout.
E5 E6	OSC_P OSC_N	I	Analog	<b>External OSC.</b> An external low jitter reference clock should be connected to these pins. See the any-frequency precision clocks family reference manual for oscillator selection details.
<b>Note:</b> Internal register names are indicated by italics, e.g., <i>IRQ_PIN</i> . See Si5374 Register Map.				

Table 11. Si5374 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Level	Description
B2 A3 B3 E4 C8 A8 B8 C9 H7 J7 H8 H9 G1 H2 J2 G2	GND GND GND GND GND GND GND GND GND GND GND GND GND GND GND GND	GND	Supply	<b>Ground for each DSPLLq.</b> Must be connected to system ground. Minimize the ground path impedance for optimal performance of this device. See recommended layout.
C2 D2 C3 D3  B7 B6 C7 C6  G8 F8 G7 F7  H3 H4 G3 G4	<i>CKIN1P_A</i> <i>CKIN1N_A</i> <i>CKIN2P_A</i> <i>CKIN2N_A</i>  <i>CKIN1P_B</i> <i>CKIN1N_B</i> <i>CKIN2P_B</i> <i>CKIN2N_B</i>  <i>CKIN1P_C</i> <i>CKIN1N_C</i> <i>CKIN2P_C</i> <i>CKIN2N_C</i>  <i>CKIN1P_D</i> <i>CKIN1N_D</i> <i>CKIN2P_D</i> <i>CKIN2N_D</i>	I	Multi	<b>Clock Inputs for DSPLLq.</b> Differential input clocks. This input can also be driven with a single-ended signal.
<b>Note:</b> Internal register names are indicated by italics, e.g., <i>IRQ_PIN</i> . See Si5374 Register Map.				

Table 11. Si5374 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Level	Description
E2 C5 E8 H5	LOL_A LOL_B LOL_C LOL_D	O	LVC MOS	<p><b>DSPLLq Loss of Lock Indicator.</b></p> <p>These pins function as the active high PLL loss of lock indicator if the <i>LOL_PIN</i> register bit is set to 1.</p> <p>0 = PLL locked. 1 = PLL unlocked.</p> <p>If <i>LOL_PINn</i> = 0, this pin will tri-state. Active polarity is controlled by the <i>LOL_POLn</i> bit. The PLL lock status will always be reflected in the <i>LOL_INTn</i> read only register bit (see application note, "AN803: Lock and Settling Time Considerations for the Si5324/27/69/74 Any-Frequency Jitter Attenuating Clock ICs).</p>
D1 A6 F9 J4	CS_CA_A CS_CA_B CS_CA_C CS_CA_D	I/O	LVC MOS	<p><b>DSPLLq Input Clock Select/Active Clock Indicator.</b></p> <p><b>Input:</b> In manual clock selection mode, this pin functions as the manual input clock selector if the <i>CKSEL_PIN</i> is set to 1.</p> <p>0 = Select CKIN1 1 = Select CKIN2</p> <p>If <i>CKSEL_PIN</i> = 0, the <i>CKSEL_REG</i> register bit controls this function and this input tristates. If configured for input, must be tied high or low.</p> <p><b>Output:</b> In automatic clock selection mode, this pin indicates which of the two input clocks is currently the active clock. If alarms exist on both clocks, <i>CK_ACTV</i> will indicate the last active clock that was used before entering the digital hold state. The <i>CK_ACTV_PIN</i> register bit must be set to 1 to reflect the active clock status to the <i>CK_ACTV</i> output pin.</p> <p>0 = CKIN1 active input clock 1 = CKIN2 active input clock</p> <p>If <i>CK_ACTV_PIN</i> = 0, this pin will tristate. The <i>CK_ACTV</i> status will always be reflected in the <i>CK_ACTV_REG</i> read only register bit.</p>
G5	SCL	I	LVC MOS	<p><b>I<sup>2</sup>C Serial Clock.</b></p> <p>This pin functions as the serial clock input. This pin has a weak pull-down.</p>
G6	SDA	I/O	LVC MOS	<p><b>I<sup>2</sup>C Serial Data.</b></p> <p>I<sup>2</sup>C pin functions as the bi-directional serial data port.</p>

**Note:** Internal register names are indicated by italics, e.g., *IRQ\_PIN*. See Si5374 Register Map.

Table 11. Si5374 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Level	Description
B1 A2 A5 A4	CKOUT1P_A CKOUT1N_A CKOUT2P_A CKOUT2N_A	O	Multi	<b>Output Clock for DSPLLq.</b> Differential output clocks. Output signal format is selected by <i>SFOUT_REG</i> register bits. Output is differential for LVPECL, LVDS, and CML compatible modes. For CMOS format, both output pins drive in phase single-ended clock outputs at the same frequency.
A9 B9 E9 D9	CKOUT1P_B CKOUT1N_B CKOUT2P_B CKOUT2N_B			
J9 J8 J5 J6	CKOUT1P_C CKOUT1N_C CKOUT2P_C CKOUT2N_C			
J1 H1 E1 F1	CKOUT1P_D CKOUT1N_D CKOUT2P_D CKOUT2N_D			
<b>Note:</b> Internal register names are indicated by italics, e.g., <i>IRQ_PIN</i> . See Si5374 Register Map.				

## 9. Ordering Guide

Ordering Part Number	Input/Output Clocks	PLL Bandwidth Range	Package	RoHS6 Pb-Free	Temperature Range
Si5374B-A-GL <sup>1</sup>	8/8	4 to 525 Hz	10x10 mm 80-PBGA	Yes	-40 to 85 °C
Si5374B-A-BL <sup>1</sup>	8/8	4 to 525 Hz	10x10 mm 80-PBGA	No	-40 to 85 °C
Si5374C-A-GL <sup>2</sup>	8/8	4 to 525 Hz	10x10 mm 80-PBGA	Yes	-40 to 85 °C
Si5374C-A-BL <sup>2</sup>	8/8	4 to 525 Hz	10x10 mm 80-PBGA	No	-40 to 85 °C
Si5374-EVB			Evaluation Board		

**Notes:**

1. These two OPNs are recommended for all new designs. Refer to application note, “AN803: Lock and Settling Time Considerations for Si5324/27/69/74 Any Frequency Jitter Attenuating Clock ICs” for more information.
2. These two OPNs are intended for use in legacy designs in which the Si5374 device must retain the original lock time behavior as described in AN803 and Product Bulletin (PB-1312191): “Si5324, Si5327, Si5369, Si5374 Loss-of-Lock (LOL) Time Behavior: New Applications Note and Ordering Options”.

## 10. Package Outline

Figure 10 illustrates the package details for the Si5374. Table 12 lists the values for the dimensions shown in the illustration.

**Figure 10. 80-Pin Plastic Ball Grid Array (PBGA)**

**Table 12. Package Dimensions**

Symbol	Min	Nom	Max		Min	Nom	Max
A	1.22	1.39	1.56		E1	8.00 BSC	
A1	0.40	0.50	0.60		e	1.00 BSC	
A2	0.32	0.36	0.40		aaa	0.10	
A3	0.46	0.53	0.60		bbb	0.10	
b	0.50	0.60	0.70		ccc	0.12	
D	10.00 BSC				ddd	0.15	
E	10.00 BSC				eee	0.08	
D1	8.00 BSC						

**Notes:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to JEDEC outline MO-192.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

## 11. Recommended PCB Layout

Figure 11. PBGA Card Layout

Table 13. Layout Dimensions

Symbol	MIN	NOM	MAX
X	0.40	0.45	0.50
C1		8.00	
C2		8.00	
E1		1.00	
E2		1.00	

**Notes:**

**General**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on the IPC-7351 guidelines.

**Solder Mask Design**

4. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu\text{m}$  minimum, all the way around the pad.

**Stencil Design**

5. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
6. The stencil thickness should be 0.125 mm (5 mils).
7. The ratio of stencil aperture to land pad size should be 1:1.

**Card Assembly**

8. A No-Clean, Type-3 solder paste is recommended.
9. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

# Si5374

## 12. Top Markings

### 12.1. Si5374 Top Marking (PBGA, Lead-Free)

### 12.2. Top Marking Explanation (PBGA, Lead-Free)

<b>Mark Method:</b>	Laser	
<b>Logo Size:</b>	6.1 x 2.2 mm Center-Justified	
<b>Font Size:</b>	0.80 mm Right-Justified	
<b>Line 1 Marking:</b>	Device Part Number	Si5374B-A-GL, Pb-free
<b>Line 2 Marking:</b>	YY = Year WW = Work Week	Assigned by the Assembly House. Corresponds to the year and work week of the mold date.
	TTTTTT = Mfg Code	Manufacturing Code from the Assembly Purchase Order form.
<b>Line 3 Marking:</b>	Pin 1 Identifier	Circle = 0.75 mm Diameter Lower-Left Justified
	“e1” Lead-Free Finish Symbol (Pb-Free BGA Balls)	Circle = 1.4 mm Diameter Center-Justified
	Country of Origin	TW

## 12.3. Si5374 Top Marking (PBGA, Lead-Finish)

## 12.4. Top Marking Explanation (PBGA, Lead-Finish)

<b>Mark Method:</b>	Laser	
<b>Logo Size:</b>	6.1 x 2.2 mm Center-Justified	
<b>Font Size:</b>	0.80 mm Right-Justified	
<b>Line 1 Marking:</b>	Device Part Number	Si5374B-A-BL, Pb finish
<b>Line 2 Marking:</b>	YY = Year WW = Work Week	Assigned by the Assembly House. Corresponds to the year and work week of the mold date.
	TTTTTT = Mfg Code	Manufacturing Code from the Assembly Purchase Order form.
<b>Line 3 Marking:</b>	Pin 1 Identifier	Circle = 0.75 mm Diameter Lower-Left Justified
	"e0" Lead Finish Symbol (SnPb BGA Balls)	Circle = 1.4 mm Diameter Center-Justified
	Country of Origin	TW

## DOCUMENT CHANGE LIST

- Updates to LOS1\_EN and LOS2\_EN on pages 53 and 54.

### Revision 0.1 to Revision 0.2

- Added 1.8 V operation.
- Added 40 MHz reference oscillator
- Corrected Figure 10 title.
- Added comment to SFOUT register.

### Revision 0.2 to Revision 0.3

- Updated and reordered spec tables.

### Revision 0.3 to Revision 0.4

- Added Silicon Labs logo to device top mark.

### Revision 0.4 to Revision 0.45

- Added comments indicating that a crystal may not be used in place of an external oscillator.
- Updated specification Tables 3, 4, and 5.
- Added maximum jitter specifications to Table 5.
- Added Thermal Characteristics table on page 12.
- Added Figure 3, "Typical Phase Noise Plot," on page 14.
- Added "5. Si5374 Application Examples and Suggestions" on page 17.
- Updated "7. Register Descriptions" on page 22.
- Added a part number for the non-RoHS6 device to "9. Ordering Guide" on page 63.
- Added recommendations on the four reset pins in "5.4. RSTL\_x Pins" on page 17.
- Added Lead-Finish top marking.

### Revision 0.45 to Revision 1.0

- Updated "Features" on page 1.
  - Revised output jitter values.
- Minor corrections to Tables 2 and 3.
- Added maximum lock and settle time specs to Table 5.
- Updated "5.5. Reference Oscillator Selection" on page 17.
  - Revised Si530 part number.
- Added warning about MEMS reference oscillators to "5.5. Reference Oscillator Selection" on page 17.
- Added Table 10 in "7.1. ICAL" on page 56.

### Revision 1.0 to Revision 1.1

- Added reference to AN803 on pages 11, 16, 31 and 60.
- Added additional LOL and Settling Time Specs on page 11.
- Added new part numbers on page 63.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
