LTC3230
5-LED Main/Sub Display Driver with Dual LDO

DESCRIPTION

WARNING!

Do not look directly at operating LED.
This circuit produces light that can damage eyes.

Demonstration circuit 1217 is a 5-LED Main/Sub Display Driver with Dual LDO featuring the LTC3230.

The LTC3230 is a low noise charge pump DC/DC converter designed to drive a four LED Main display and a one LED Sub display via a single wire interface. The LTC3230 also contains two 200mA Low Dropout (LDO) linear regulators, each with three selectable preset output voltages and independent enable pins.

The charge pump only requires four external capacitors and the program resistor to form a complete LED power supply and current controller. The program resistor sets the maximum LED current. There are 32 dimming states available for the Main and Sub displays. The charge pump efficiency is optimized by sensing the voltage across the LED current sources and automatically switching to 1.5x mode, and subsequently 2x mode, whenever an LED current source approaches dropout.

Design files for this circuit board are available. Call the LTC factory.

PERFORMANCE SUMMARY Specifications are at T_A = 25°C

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Input Supply Range		2.7		5.5	V
LDO1 Output Voltage	V1 Jumper, JP1 = 1.8V, ENLDO1 Jumper, JP3 = HI, I_{LOAD} <= 200mA		1.8		V
	V1 Jumper, JP1 = 1.5V, ENLDO1 Jumper, JP3 = HI, I_{LOAD} <= 200mA		1.5		
	V1 Jumper, JP1 = 1.2V, ENLDO1 Jumper, JP3 = HI, I_{LOAD} <= 200mA		1.2		
LDO2 Output Voltage	V2 Jumper, JP2 = 3.3V, ENLDO2 Jumper, JP4 = HI, I_{LOAD} <= 200mA, VIN => 3.55V		3.3		V
	V2 Jumper, JP2 = 2.8V, ENLDO2 Jumper, JP4 = HI, I_{LOAD} <= 200mA, VIN => 3.05V		2.8		
	V2 Jumper, JP2 = 1.8V, ENLDO2 Jumper, JP4 = HI, I_{LOAD} <= 200mA		1.8		
CPO Output Voltage	1x Mode, I_{CPO} = 0mA		VIN		V
	1.5x Mode, I_{CPO} = 0mA		4.55		
	2x Mode, I_{CPO} = 0mA		5.05		
VIN Shutdown Current	VIN = 3.6V, ENM = ENS = ENLDO1 = ENLDO2 = LOW		3	7	µA
LED Current Ratio (I_{LED}/I_{RSET})			545		A/A
LED Dropout Voltage	VIN = 3.6V, I_{LED} = 15mA		100		mV
I_{LED} Main/Sub LEDs	RSET = 1.74K, 1 ENM/ENS Strobe (FS)		25		mA
	RSET = 1.74K, 31 ENM/ENS Strobes (FS/31)		0.806		mA

OPERATING PRINCIPLES

The maximum LED currents are set with a 17.4KΩ resistor for the Main and Sub displays. Current for each LED is controlled with a precision internal current source driven by a 5-bit linear DAC. The intensity

of the displays are adjusted by strobing the ENM and ENS pins. See the LTC3230 data sheet for more information on this process. The DC1217 uses a PIC micro-controller to interpret commands sent by the DC590 board via a 2-wire I²C serial interface. The micro-controller then sets the LED displays by strobing the ENM and ENS pins appropriately. An external pulse generator may also be used to control the ENM and ENS pin by setting the ENM Control jumper (JP5)

and ENS Control Jumper (JP6) to external and connecting a pulse generator to the EXT ENM and EXT ENS terminals.

LDO1 and LDO2 may be enabled by setting the ENLDO1 jumper (JP3) and the ENLDO2 jumper (JP4) to the HI position. The LDO output voltages are selected by setting the output voltage jumpers V1 (JP1) and V2 (JP2) to the desired voltages.

QUICK START PROCEDURE

Demonstration circuit 1217 is easy to set up to evaluate the performance of the LTC3230. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

NOTE. When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the VIN or LDO and GND terminals. See Figure 2 for proper scope probe technique.

1. Place jumpers in the following positions:

JP1 V1: 1.8V

JP2 V2: 3.3V

JP3 ENLDO1: LO

JP4 ENLDO2: LO

JP5 ENM CONTROL: DC590

JP6 ENS CONTROL: DC590

2. With power off, connect the input power supply to the VIN and GND terminals.

3. Refer to the DC590 Quick Start guide for QuikEval™ setup and software installation details.

4. Make sure the USB cable is connected between the computer and the DC590 controller board.

5. Connect DC1217 to the DC590 USB Serial Controller using the supplied 14-conductor ribbon cable as shown in Figure 1.

6. Turn on the power at the input.

NOTE. Make sure that the input voltage does not exceed 6V.

7. Run the QuikEval program. The program detects the DC1217 and displays the LTC3230 control window (shown in Figure 3).

8. Check that the voltages at LDO1 and LDO2 are equal to 0V.

9. Move the ENLDO1 jumper from the LO position to the HI position. Check for the proper output voltage, LDO1 = 1.74V to 1.86V

10. Move the ENLDO2 jumper from the LO position to the HI position. Check for the proper output voltage, LDO2 = 3.2V to 3.4V

11. Once the proper output voltages are established, connect and adjust the loads within the operating range and observe the output voltage regulation, ripple voltage, efficiency and other parameters.

12. Repeat step 12 with the V1 jumper set to 1.5V and then 1.2V. LDO1 = 1.45V to 1.55V and 1.16V to 1.24V respectively.

13. Repeat step 12 with the V2 jumper set to 2.8V and then 1.8V. LDO2 = 2.71V to 2.89V and 1.74V to 1.86V respectively.

USING THE LTC3230 QUIKEVAL SOFTWARE

The program provides brightness controls for the Main and Sub LED displays. The **UPDATE** button updates the PIC controller with the appropriate pulse timing information and sets the LED displays to the current settings on the LTC3230 demo control window. This button must be selected after power is applied, the DC590 board was disconnected, or the PIC RESET button was depressed.

The **LEDS OFF** button sets all LEDs to zero and stops the gradation cycle.

VIEW LTC3230 PRODUCT PAGE Button – This button opens an internet browser and searches the Linear Technology Corporation web site for information on the LTC3230 when an internet connection is available.

ENM Control – This vertical slide control adjusts the Main LEDs from 0 to 25mA in 32 steps. This is ac-

complished by clicking on the up or down arrows to increment by one LSB, by clicking and dragging the slide pointer, or by clicking in the vertical scroll bar. The individual LED current and the number of pulses required to achieve this current are displayed in the two text boxes below the slider.

ENS Control – This vertical slide control adjusts the Sub LED from 0 to 25mA in 32 steps. This is accomplished by clicking on the up or down arrows to increment by one LSB, by clicking and dragging the slide pointer, or by clicking in the vertical scroll bar. The individual LED current and the number of pulses required to achieve this current are displayed in the two text boxes below the slider.

GRADATION STEP TIME Drop-Down Window – This window allows the user to select the length of time for each gradation step while running the GRADATION Cycle. See GRADATION Cycle button for more details on this function. The gradation step time may be adjusted from 10ms to 200ms in various increments.

GRADATION Cycle Button – This button may be selected to start or stop the GRADATION Cycle. The GRADATION Cycle cycles through the brightness levels of all the LEDs starting from the lowest to the highest intensity and then back to the lowest. To increase the LED intensity, the enable pins are held low for 250us prior to the first pulse of each step. After the highest intensity is reached, the intensity is then decreased by a single 5us pulse. This decrements the internal counter by one from the previous setting. This is done until the lowest setting is reached. This cycle is repeated until the GRADATION Cycle button is selected again or until the LEDS OFF button is selected.

UPDATE Button – When this button is selected, the PIC is updated with the pulse timing and the LED displays are updated to the present settings on the LTC3230 control window. This is necessary after power is applied to the demo board, the ribbon cable has been disconnected, or when the PIC RESET push button has been depressed.

LEDS OFF Button – This button turns off all of the LEDs and turns off GRADATION Cycle.

PIC RESET Push Button (SW1) – This button is located on the DC1217 demo board. It Resets the PIC when depressed. The reset button will not update or change the demo control window. The UPDATE button on the LTC3230 control window may be used to update the PIC to the current control window settings.

WARNING!
Do not look directly at operating LED.
Serious eye damage may occur.

CUSTOMER NOTICE

LINEAR TECHNOLOGY HAS MADE A BEST EFFORT TO DESIGN A CIRCUIT THAT MEETS CUSTOMER-SUPPLIED SPECIFICATIONS; HOWEVER, IT REMAINS THE CUSTOMER'S RESPONSIBILITY TO VERIFY PROPER AND RELIABLE OPERATION IN THE ACTUAL APPLICATION. COMPONENT SUBSTITUTION AND PRINTED CIRCUIT BOARD LAYOUT MAY SIGNIFICANTLY AFFECT CIRCUIT PERFORMANCE OR RELIABILITY. CONTACT LINEAR TECHNOLOGY APPLICATIONS ENGINEERING FOR ASSISTANCE.

THIS CIRCUIT IS PROPRIETARY TO LINEAR TECHNOLOGY AND SUPPLIED FOR USE WITH LINEAR TECHNOLOGY PARTS.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
