

FEATURES

- LTC1321: 2-EIA562/RS232 Transceivers/2-RS485 Transceivers
- LTC1322: 4-EIA562/RS232 Transceivers/2-RS485 Transceivers
- LTC1335: 4-EIA562 Transceivers/2-RS485 Transceivers with OE
- LTC1321/LTC1322 Have the Same Pinout as SP301/SP302
- LTC1335 Features Receiver Three-State Outputs
- Low Supply Current: **1mA Typical**
- 15 μ A Supply Current in Shutdown
- 120kBaud in EIA/TIA-562 or RS232 Mode
- 10MBaud in RS485/RS422 Mode
- Self-Testing Capability in Loopback Mode
- Power-Up/Down Glitch-Free Outputs
- Driver Maintains High Impedance in Three-State, Shutdown or With Power Off
- Thermal Shutdown Protection
- I/O Lines Can Withstand ± 25 V
- Withstands Repeated 10kV ESD Pulses

APPLICATIONS

- Low Power RS485/RS422/EIA562/RS232 Interface
- Cable Repeater
- Level Translator

DESCRIPTION

The LTC1321/LTC1322/LTC1335 are low power CMOS bidirectional transceivers, each featuring two reconfigurable interface ports. Each can be configured as two RS485 differential ports, as two single-ended ports, or as one RS485 differential port and one single-ended port. The LTC1321/LTC1322 can provide RS232 or EIA562 compatible single-ended outputs; the LTC1335 provides EIA562 compatible outputs and additionally includes an output enable pin, allowing the receiver logic level outputs to be three-stated.

The RS232/EIA562 transceivers operate to 120kbaud and are in full compliance with EIA/TIA-562 specification. The RS485 transceivers operate to 10Mbaud and are in full compliance with RS485 and RS422 specifications. All interface drivers feature short-circuit and thermal shutdown protection. An enable pin allows RS485 driver outputs to be forced into high impedance which is maintained even when the outputs are forced beyond supply rails or power is off. Both driver outputs and receiver inputs feature ± 10 kV ESD protection. A loopback mode connects the driver outputs back to the receiver inputs for diagnostic self-test.

The LTC1321/LTC1322 can support RS232 voltage levels when $6.5\text{V} \leq V_{DD} \leq 10\text{V}$ and $-6.5\text{V} \geq V_{EE} \geq -10\text{V}$. The LTC1335 supports receiver output enable but not RS232 levels. A shutdown mode reduces the I_{CC} supply current to 15 μ A.

TYPICAL APPLICATION

1321/22/35 TA01

LTC1321/LTC1322/LTC1335

ABSOLUTE MAXIMUM RATINGS

Supply Voltage

V_{CC}	6.5V
V_{DD} (LTC1321/LTC1322 Only)	10V
V_{EE}	-10V

Input Voltage

Drivers	-0.3V to ($V_{CC} + 0.3V$)
Receivers	-25V to 25V
ON/OFF, \overline{LB} , SEL1, SEL2, \overline{OE}	-0.3V to ($V_{CC} + 0.3V$)

Output Voltage

Drivers	-25V to 25V
Receivers	-0.3V to ($V_{CC} + 0.3V$)
Output Short-Circuit Duration	Indefinite
Operating Temperature Range	
LTC1321C/LTC1322C/LTC1335C	0°C to 70°C
LTC1321I/LTC1322I/LTC1335I	-40°C to 85°C
Storage Temperature Range	-65°C to 150°C
Lead Temperature (Soldering, 10 sec)	300°C

The ● denotes specifications which apply over the full operating temperature range.

Note 1: Absolute maximum ratings are those values beyond which the safety of the device cannot be guaranteed.

Note 2: All currents into device pins are positive; all currents out of device pins are negative. All voltages are referenced to device ground unless otherwise specified.

Note 3: All typicals are given at $V_{CC} = V_{DD}$ (LTC1321/LTC1322) = 5V, $V_{EE} = -5V$, and $T_A = 25^\circ C$.

Note 4: Short-circuit current for RS485 driver output low state folds back above V_{CC} . Peak current occurs around $V_O = 3V$.

PIN FUNCTIONS

LTC1321

V_{DD} (Pin 1): Positive Supply Input for EIA/TIA-562 Drivers.

B1 (Pin 2): Receiver Input.

A1 (Pin 3): Receiver Input.

Z1 (Pin 4): Driver Output.

Y1 (Pin 5): Driver Output.

SEL1 (Pin 6): Interface Mode Select Input.

SEL2 (Pin 7): Interface Mode Select Input.

Y2 (Pin 8): Driver Output.

Z2 (Pin 9): Driver Output.

A2 (Pin 10): Receiver Input.

B2 (Pin 11): Receiver Input.

GND (Pin 12): Ground.

V_{EE} (Pin 13): Negative Supply.

NC (Pin 14): No Connection.

R_{A2} (Pin 15): Receiver Output.

DE2 (Pin 16): Driver Enable with Internal Pull-Up in RS485 Mode.

D_{Y2} (Pin 17): Driver Input.

ON/OFF (Pin 18): A HIGH logic input enables the transceivers. A LOW puts the device into shutdown mode and reduces I_{CC} to 15μA. This pin has an internal pull-up.

LB (Pin 19): Loopback Control Input. A LOW logic level enables loopback connections. This pin has an internal pull-up.

D_{Y1} (Pin 20): Driver Input.

DE1 (Pin 21): Driver Enable with Internal Pull-Up in RS485 Mode.

R_{A1} (Pin 22): Receiver Output.

NC (Pin 23): No Connection.

V_{CC} (Pin 24): Positive Supply; $4.75V \leq V_{CC} \leq 5.25V$.

LTC1322/LTC1335

OE/V_{DD} (Pin 1): For LTC1335, pin 1 is the receiver output enable with internal pull-down. For LTC1322, pin 1 is the positive supply input for EIA/TIA-562 drivers.

B1 (Pin 2): Receiver Input.

A1 (Pin 3): Receiver Input.

Z1 (Pin 4): Driver Output.

Y1 (Pin 5): Driver Output.

SEL1 (Pin 6): Interface Mode Select Input.

SEL2 (Pin 7): Interface Mode Select Input.

Y2 (Pin 8): Driver Output.

Z2 (Pin 9): Driver Output.

A2 (Pin 10): Receiver Input.

B2 (Pin 11): Receiver Input.

GND (Pin 12): Ground.

V_{EE} (Pin 13): Negative Supply.

R_{B2} (Pin 14): Receiver Output.

R_{A2} (Pin 15): Receiver Output.

D_{Z2}/DE2 (Pin 16): EIA/TIA-562 Driver Input in EIA562 Mode. RS485 Driver Enable with Internal Pull-Up in RS485 Mode.

D_{Y2} (Pin 17): Driver Input.

ON/OFF (Pin 18): A HIGH logic input enables the transceivers. A LOW puts the device into shutdown mode and reduces I_{CC} to 15μA. This pin has an internal pull-up.

LB (Pin 19): Loopback Control Input. A LOW logic level enables loopback connections. This pin has an internal pull-up.

D_{Y1} (Pin 20): Driver Input.

D_{Z1}/DE1 (Pin 21): EIA/TIA-562 Driver Input in EIA562 Mode. RS485 Driver Enable with Internal Pull-Up in RS485 Mode.

R_{A1} (Pin 22): Receiver Output.

R_{B1} (Pin 23): Receiver Output.

V_{CC} (Pin 24): Positive Supply; $4.75V \leq V_{CC} \leq 5.25V$.

APPLICATIONS INFORMATION

Basic Theory of Operation

The LTC1321/LTC1322/LTC1335 each have two interface ports. Each port may be configured as single-ended EIA562 transceiver(s) or differential RS485 transceiver by forcing the port's selection input to a LOW or HIGH, respectively. The LTC1321 provides one EIA562 driver and one EIA562 receiver per port to maintain same pinout as SP301. The LTC1322 and LTC1335 each provide two drivers and two receivers per port. Additionally, the LTC1321 and LTC1322 single-ended ports are RS232 compatible with higher V_{DD} and V_{EE} supply levels.

All the interface drivers feature three-state outputs. Interface outputs are forced into high impedance when the driver is disabled, in the shutdown mode, or with the power off.

All the interface driver outputs are fault protected by a current limiting and thermal shutdown circuit. The thermal shutdown circuit disables both the EIA562 and RS485 driver outputs when the die temperature reaches 150°C. The thermal shutdown circuit enables the drivers when the die temperature cools to 135°C.

In RS485 mode, shutdown mode or with the power off, the input resistance of the receiver is 24k. The input resistance drops to 6.3k in EIA562 mode.

A logic LOW at the \overline{OE} pin shuts down the device and forces all the outputs into a high impedance state. A logic HIGH enables the device. An internal 4 μ A current source to V_{CC} pulls the \overline{OE} pin HIGH if left open.

In RS485 mode, an internal 4 μ A current source pulls the driver enable pin HIGH if left open. The RS485 receiver has a 4 μ A current source at the noninverting input. If both the RS485 receiver inputs are open, the output is a high state. Both the current sources are disabled in the EIA562 mode.

For LTC1335, a logic LOW at the \overline{OE} pin enables all the receiver outputs and a logic HIGH disables all the receiver outputs. An internal 4 μ A current source pulls the \overline{OE} pin LOW if left open.

A loopback mode enables internal connections from driver outputs to receiver inputs for self-test when the

APPLICATIONS INFORMATION

$\overline{\text{LB}}$ pin has a LOW logic state. The driver outputs are not isolated from the external loads. This allows transmitter verification under the loaded condition. An internal $4\mu\text{A}$ current source pulls the $\overline{\text{LB}}$ pin HIGH if left open and disables the loopback configuration.

EIA562/RS485 Applications

EIA562 and RS485 output levels are supported when LTC1321/LTC1322/LTC1335 are powered from $\pm 5\text{V}$ supplies. The LTC1321/LTC1322 require the V_{DD} and V_{CC} pins to be tied together and connected to 5V supply (Figure 13). The V_{DD} and V_{CC} are connected internally and brought out at V_{CC} pin in the LTC1335. The unloaded outputs will swing from -5V to 5V in EIA562 mode, and from 0V to 5V in RS485 mode.

RS232/RS485 Applications

If true RS232-compatible outputs are required, the LTC1321/LTC1322 may be used with the V_{DD} and V_{EE} supply voltages increased to provide the additional signal swing. To meet RS232, V_{DD} must be between 6.5V and 10V , and V_{EE} must be between -6.5V and -10V . V_{CC} remains connected to 5V . If only $\pm 12\text{V}$ supplies are available, inexpensive Zener diodes (Z1 and Z2) may be connected in series with V_{DD} and V_{EE} supply pins as shown in Figure 14. An optional 16V Zener diode between V_{CC} and V_{EE} is recommended to keep the maximum voltage between V_{CC} and V_{EE} within safe limits.

LocalTalk®/AppleTalk® Applications

The LTC1321/LTC1322/LTC1335 can be used to provide AppleTalk/LocalTalk-compatible signals in RS485 mode. Figure 15 shows one half of an LTC1335 connected to an LTC1320 AppleTalk transceiver in a typical LocalTalk configuration. Figure 16 shows a typical direct-wire connection with the LTC1335 as the DCE transceiver and the LTC1320 as the DTE transceiver. The LTC1321/LTC1322/LTC1335 RS485 mode is capable of meeting all AppleTalk protocol specifications.

APPLICATIONS INFORMATION

Figure 15. Apple LocalTalk Implemented Using LTC1320 and LTC1335 Transceivers

Figure 16. AppleTalk Direct Connect Using LTC1320 for DTE and LTC1335 for DCE Transceivers

TYPICAL APPLICATIONS

A typical EIA562/RS232 interface application is shown in Figure 17 with LTC1322. A typical EIA562 interface application with LTC1335 is shown in Figure 18.

A typical connection for RS485 transceiver is shown in Figure 19. A twisted pair of wires connects up to 32 drivers

and receivers for half duplex multi-point data transmission. The wires must be terminated at both ends with resistors equal to the wire's characteristic impedance, generally 120Ω . An optional shield around the twisted pair helps to reduce unwanted noise and should be connected to ground at one end.

Figure 17. Typical Connection for EIA562/RS232 Interface

Figure 18. Typical Connection for EIA562 Interface

Figure 19. Typical Connection for RS485 Interface

TYPICAL APPLICATIONS

A typical RS422 connection shown in Figure 20 allows one driver and ten receivers on a twisted pair of wires terminated with a 100Ω resistor at one end. The ground shield is optional.

A typical twisted pair line repeater is shown in Figure 21. As data transmission rate drops with increased cable length, repeater can be inserted to improve transmission rate or to transmit beyond 4000 feet limit.

Figure 20. Typical Connection for RS422 Interface

Figure 21. Typical Cable Repeater for RS422 Interface

TYPICAL APPLICATIONS

The LTC1322/LTC1335 can be used to translate EIA562 to RS422 interface level or vice versa as shown in Figure 22. One port is configured as EIA562 transceiver and the other as RS485 transceiver. The LTC1322 can also support RS232 to RS422 level translation if V_{DD} is between 6.5V and 10V, and V_{EE} is between $-6.5V$ and $-10V$.

Using two LTC1321/LTC1335 as level translators, the EIA562/RS232 interface distance can be extended to 4000 feet with twisted wires (Figure 23).

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
