

STEP-UP DC/DC CONVERTER

NO.EA-298-141208

OUTLINE

The R1207N Series are CMOS-based PWM control type step-up DC/DC converter ICs with low supply current. Each of these ICs consists of an NMOS FET, a diode, an oscillator, a PWM comparator, a voltage reference unit, an error amplifier, a current limit circuit, an under voltage lockout circuit (UVLO), an over-voltage protection circuit (OVP), a soft-start circuit, a Maxduty limit circuit, and a thermal shutdown protection circuit. This step-up DC/DC converter can be easily built with a few external components such as a coil, a resistor, and a capacitor. As the protection functions, the R1207N Series have a Lx peak current limit function, an over voltage protection (OVP) function, an under voltage lock out (UVLO) function and a thermal shutdown function.

The R1207N Series present the R1207N8xxA version that is optimized for the constant voltage power source, and the R1207N8xxB/C version that is optimized for driving the white LED with the constant current. The R1207N8xxB/C is an adjustable version that can change the LED brightness dynamically by using a 200Hz to 300kHz PWM signal toward the CE pin.

The R1207N Series are available in TSOT-23-6 package.

FEATURES

- Input Voltage Range 2.3V to 5.5V (R1207N8xxA)
1.8V to 5.5V (R1207N8xxB/C)
- Supply Current Typ. 800 μ A
- Standby Current Max. 5 μ A
- Feedback Voltage 1.0V \pm 1.5% (R1207N8xxA)
0.2V \pm 10mV (R1207N8xxB)
0.4V \pm 10mV (R1207N8xxC)
- Oscillator Frequency Typ. 1.2MHz
- Maximum Duty Cycle Typ. 91%
- UVLO Function Typ.2.0V (Hys.Typ.0.2V) (R1207N8xxA)
Typ.1.6V (Hys.Typ.0.1V) (R1207N8xxB/C)
- Lx Current Limit Function Select from 350mA, 700mA
- Over Voltage Protection Typ. 25V
- LED dimming control (R1207N8xxB/C) by external PWM signal (Frequency 200Hz to 300kHz)
- Thermal Protection Function Typ.150 $^{\circ}$ C(Hys.Typ.50 $^{\circ}$ C)
- Switch ON Resistance Typ. 1.35 Ω
- Package TSOT-23-6
- Ceramic capacitors are recommended

APPLICATION

- Constant Voltage Power Source for portable equipment
- OLED power supply for portable equipment
- White LED Backlight for portable equipment

SELECTION GUIDE

The OVP threshold voltage, current limit and V_{FB} /Auto discharge are user-selectable options.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1207N8x3*-TR-FE	TSOT-23-6	3,000 pcs	Yes	Yes
x : Designation of current limit. (1) 350mA (2) 700mA				
* : Designation of V_{FB} . (A) 1.0V (B) 0.2V (C) 0.4V				

PIN CONFIGURATIONS

PIN DESCRIPTIONS

• TSOT-23-6

Pin No	Symbol	Pin Description
1	L _X	Switching Pin (Open Drain Output)
2	GND	Ground Pin
3	V _{FB}	Feedback Pin
4	CE	Chip Enable Pin ("H" Active)
5	V _{OUT}	Output Pin
6	V _{IN}	Input Pin

ABSOLUTE MAXIMUM RATINGS

GND=0V

Symbol	Item	Rating	Unit
V_{IN}	V_{IN} Pin Voltage	-0.3 to 6.5	V
V_{CE}	CE Pin Voltage	-0.3 to 6.5	V
V_{FB}	V_{FB} Pin Voltage	-0.3 to 6.5	V
V_{OUT}	V_{OUT} Pin Voltage	-0.3 to 28	V
V_{LX}	L_X Pin Voltage	-0.3 to 28	V
I_{LX}	L_X Pin Current	1000	mA
P_D	Power Dissipation (TSOT-23-6)*	460	mW
T_a	Operating Temperature Range	-40 to 85	°C
T_{stg}	Storage Temperature Range	-55 to 125	°C

*) For details regarding Power Dissipation and Standard Test Land Pattern, please refer to PACKAGE INFORMATION.

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

C1	R1207N8xxB/C	6.3	CM105B105K06
C2	R1207N8xxB	25	GRM21BR11E224
	R1207N8xxC	25	C2012X7R1E474K
R1	R1207N8xxB	-	(10/ LED Arrays* ¹ (Ω))
	R1207N8xxC	-	(20/ LED Arrays* ¹ (Ω))

*¹ LED Arrays indicate the number of parallel LEDs in series.

- **The Method of Output Voltage Setting (R1207N8xxA)**

The output voltage (V_{OUT}) can be calculated with divider resistors ($R1$ and $R2$) values as the following formula:

$$\text{Output Voltage } (V_{OUT}) = V_{FB} \times (R1 + R2) / R1$$

The total value of $R1$ and $R2$ should be equal or less than $300k\Omega$. Make the V_{IN} and GND line sufficient. The large current flows through the V_{IN} and GND line due to the switching. If this impedance (V_{IN} and GND line) is high, the internal voltage of the IC may shift by the switching current, and the operating may become unstable. Moreover, when the built-in L_X switch is turn OFF, the spike noise caused by the inductor may be generated. As a result of this, recommendation voltage rating of capacitor ($C2$) value is equal 1.5 times larger or more than the setting output voltage.

- **LED Current setting (R1207N8xxB/C)**

When CE pin input is "H" (Duty=100%), LED current can be set with feedback resistor ($R1$)

$$I_{LED} = V_{FB} / R1$$

- **LED Dimming Control (R1207N8xxB/C)**

The LED brightness can be controlled by inputting the PWM signal to the CE pin. If the CE pin input is "L" in the fixed time (Typ.0.5ms), the IC becomes the standby mode and turns OFF LEDs.

The current of LEDs can be controlled by Duty of the PWM signal of the input CE pin. The current of LEDs when High-Duty of the CE input is "Hduty" reaches the value as calculatable following formula.

$$I_{LED} = Hduty \times V_{FB} / R1$$

The frequency of the PWM signal is using the range between 200Hz to 300kHz.

When controlling the LED brightness by the PWM signal of 5kHz or less, R1207N8xxB/C are recommended to avoid discharge function during dimming control.

When controlling the LED brightness by the PWM signal of 20kHz or less, the increasing or decreasing of the inductor current might be make a sounds in the hearable sound wave area. In that case, please use the PWM signal in the high frequency area.

Dimming Control by CE Pin Input

- **Low luminance Dimming Accuracy (R1207N8xxC)**

Low luminance Dimming filtered V_{FB} voltage tolerance depends on the offset voltage of the internal DC/DC converter. By this offset voltage, some voltage difference may be generated between V_{REF} voltage and V_{FB} voltage. Low luminance Dimming Accuracy is shown in Table.4

Table 4. Low luminance Dimming Accuracy for R1207N8xxC (R1=20ohm)

The duty of a PWM signal for the CE pin	I _{LED} Min.	I _{LED} Max.
3.5% (Frequency = 20kHz ~ 300kHz)	0.01mA ²	2.1mA ²

² guaranteed by design engineering (Ta=25 °C)

- **Soft-Start (R1207N8xxB/C)**

The output and reference of the error amplifier start from 0V and the reference gradually rises up to 1.0V. After the softstart time (T_{SS}), output voltage rise up to the setting voltage.

The output of the error amplifier starts from 0V and the inrush current is suppressed when starting by the CE pin "H" input. Moreover, the inrush current can be suppressed by gradually enlarging Duty of the PWM signal to the CE pin.

- **Current Limit Function**

Current limit function monitors the over current and if it reaches the peak current, it will turn off the driver. When the over current decreases, it will restart oscillation and will restart the monitoring.

- **Inductor Selection**

The peak current of the inductor under the stationary operation can be calculated by the following formula.

$$I_{Lmax} = 1.25 \times I_{LED} \times V_{OUT} / V_{IN} + 0.5 \times V_{IN} \times (V_{OUT} - V_{IN}) / (L \times V_{OUT} \times f_{osc})$$

In the case of adjusting the brightness at the start-up or by the CE pin, the peak current can be transiently more than the above. Select the inductor that can limit the peak current within the current limit of the ICs.

Also, select the inductor of which peak current will not exceed the rated inductor value. The recommended inductance value is between 10μH to 22μH.

- **Capacitor Selection**

The recommended capacitor value for C1 is in the range from 1.0μF to 4.7μF. Connect C1 between V_{IN} and GND pin as close as possible to the pins.

Connect a output capacitor in the range from 1.0μF to 4.7μF between V_{OUT} and GND pins. (R1207N8xxA)

Connect a output capacitor in the range from 0.22μF to 1.0μF between V_{OUT} and GND pins. (R1207N8xxB)

Connect a output capacitor in the range from 0.47μF to 2.2μF between V_{OUT} and GND pins. (R1207N8xxC)

- **External Components Setting**

If the V_{OUT} spike noise is high, it may influence on the V_{FB} pin to cause the operation of R1205x8xxA unstable. To reduce the noise coming into V_{FB} pin, please place a 1kΩ to 5kΩ resistor in R3 in Fig 1.

- **Application of Using 5.5V or more Power Supply**

Other than the IC power supply, if there is a power supply greater than 5.5V, the high power output can be achieved by using the power supply as an inductor power supply. In this case, please place a capacitor between an inductor power supply and GND (shown in Fig 2.) aside from a bypass capacitor between the V_{IN} pin and GND of the IC.

Fig 1. R1207N8xxA

Fig 2. R1207N8xxB/C

OPERATION OF STEP-UP DC/DC CONVERTER AND OUTPUT CURRENT

<Basic Circuit>

<Current through L>

Discontinuous mode

Continuous mode

There are two operation modes of the step-up PWM control-DC/DC converter. That is the continuous mode and discontinuous mode by the continuousness inductor.

When the transistor turns ON, the voltage of inductor L becomes equal to V_{IN} voltage. The increase value of inductor current ($i1$) will be

$$\Delta i1 = V_{IN} \times t_{on} / L \dots\dots\dots \text{Formula 1}$$

As the step-up circuit, during the OFF time (when the transistor turns OFF) the voltage is continually supply from the power supply. The decrease value of inductor current ($i2$) will be

$$\Delta i2 = (V_{OUT} - V_{IN}) \times t_{open} / L \dots\dots\dots \text{Formula 2}$$

At the PWM control-method, the inductor current become continuously when $t_{open}=t_{off}$, the DC/DC converter operate as the continuous mode.

In the continuous mode, the variation of current of i_1 and i_2 is same at regular condition.

$$V_{IN} \times t_{on} / L = (V_{OUT} - V_{IN}) \times t_{off} / L \dots\dots\dots \text{Formula 3}$$

The duty at continuous mode will be

$$\text{duty (\%)} = t_{on} / (t_{on} + t_{off}) = (V_{OUT} - V_{IN}) / V_{OUT} \dots\dots\dots \text{Formula 4}$$

The average of inductor current at $t_f = t_{off}$ will be

$$I_{L(\text{Ave.})} = V_{IN} \times t_{on} / (2 \times L) \dots\dots\dots \text{Formula 5}$$

If the input voltage = output voltage, the I_{OUT} will be

$$I_{OUT} = V_{IN}^2 \times t_{on} / (2 \times L \times V_{OUT}) \dots\dots\dots \text{Formula 6}$$

If the I_{OUT} value is large than above the calculated value (Formula 6), it will become the continuous mode, at this status, the peak current (I_{Lmax}) of inductor will be

$$I_{Lmax} = I_{OUT} \times V_{OUT} / V_{IN} + V_{IN} \times t_{on} / (2 \times L) \dots\dots\dots \text{Formula 7}$$

$$I_{Lmax} = I_{OUT} \times V_{OUT} / V_{IN} + V_{IN} \times T \times (V_{OUT} - V_{IN}) / (2 \times L \times V_{OUT}) \dots\dots\dots \text{Formula 8}$$

The peak current value is larger than the I_{OUT} value. In case of this, selecting the condition of the input and the output and the external components by considering of I_{Lmax} value.

The explanation above is based on the ideal calculation, and the loss caused by $L \times$ switch and the external components are not included.

The actual maximum output current will be between 50% and 80% by the above calculations. Especially, when the I_L is large or V_{IN} is low, the loss of V_{IN} is generated with on resistance of the switch. Moreover, it is necessary to consider V_f of the diode (approximately 0.8V) about V_{OUT} .

TYPICAL CHARACTERISTICS

1) Efficiency vs. Output Current Characteristics (R1207N823A)

V_{OUT}=10V, L=10μH (LQH32CN100K53)

V_{OUT}=10V, L=22μH (LQH32CN220K53)

V_{OUT}=15V, L=10μH (LQH32CN100K53)

V_{OUT}=15V, L=22μH (LQH32CN220K53)

V_{OUT}=20V, L=10μH (LQH32CN100K53)

V_{OUT}=20V, L=22μH (LQH32CN220K53)

$V_{OUT}=20V, V_{IN}=3.6V$

■ Typical Applications with Using 5.5V or Greater

$V_{OUT}=15V, L=10\mu H$ (LQH32CN100K53)

$V_{OUT}=20V, L=10\mu H$ (LQH32CN100K53)

2) Efficiency vs. Output Current Characteristics (R1207N823B/C)

4LED, $L=10\mu H$ (LQH32CN100K53)

4LED, $L=22\mu H$ (LQH32CN220K53)

5LED, L=10 μ H (LQH32CN100K53)

5LED, L=22 μ H (LQH32CN220K53)

6LED, L=10 μ H (LQH32CN100K53)

6LED, L=22 μ H (LQH32CN220K53)

6LED, VIN=3.6V

■ Typical Applications with Using 5.5V or Greater

5LED, $V_{IN(IC)}=3.6V$

6LED, $V_{IN(IC)}=3.6V$

3) Output Voltage vs. Output Current (R1207N823A)

$V_{OUT}=10V, L=10\mu H$ (LQH32CN100K53)

$V_{OUT}=10V, L=22\mu H$ (LQH32CN220K53)

$V_{OUT}=15V, L=10\mu H$ (LQH32CN100K53)

$V_{OUT}=15V, L=22\mu H$ (LQH32CN220K53)

V_{OUT}=20V, L=10μH (LQH32CN100K53)

V_{OUT}=20V, L=22μH (LQH32CN220K53)

V_{OUT}=20V, V_{IN}=3.6V

■ Typical Applications with Using 5.5V or Greater

V_{OUT}=15V, L=10μH (LQH32CN100K53)

V_{OUT}=20V, L=10μH (LQH32CN100K53)

4) Maxduty vs. ILED

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
