

Features

- Programmable 4,194,304 x 1 and 8,388,608 x 1-bit Serial Memories Designed to Store Configuration Programs for Field Programmable Gate Arrays (FPGAs)
- 3.3V Output Capability
- 5.0V Tolerant I/O Pins
- Program Support using the Atmel ATDH2200E System, ATDH2225 ISP cable, or Third-party Programmers
- In-System Programmable (ISP) via 2-wire Bus
- Simple Interface to SRAM FPGAs
- Compatible with Atmel AT40K and AT94K Devices, Altera® FLEX®, APEX™ Devices, Lucent® ORCA® FPGAs, Xilinx® XC3000, XC4000, XC5200, Spartan®, Virtex® FPGAs, and Motorola® MPA1000 FPGAs
- Cascadable Read-back to Support Additional Configurations or Higher-density Arrays
- Low-power CMOS FLASH Process
- Available in 6mm x 6mm x 1mm 8-pad LAP (Pin-compatible with 8-lead SOIC/VOIC Packages) and 20-lead PLCC Packages
- Emulation of the Atmel AT24C Serial EEPROMs
- Low-power Standby Mode
- Single Device Capable of Holding 4-Bitstream Files Allowing Simple System Reconfiguration
- Fast Serial Download Speeds up to 33MHz
- Endurance: 100,000 Write Cycles Typical
- Green (Pb/Halide-free/RoHS Compliant) Package Options

Description

The Atmel® AT17F Series of In-System Programmable Configuration PROMs (Configurators) provide an easy-to-use, cost-effective configuration memory solution for FPGAs. The AT17F Series devices are packaged in the 8-pad LAP and 20-lead PLCC packages (Table 1-1). The AT17F Series Configurators use a simple serial-access procedure to configure one or more FPGA devices.

The AT17F Series Configurators can be programmed with industry-standard programmers, the Atmel ATDH2200E Programming Kit or the Atmel ATDH2225 ISP Cable.

Table 1. AT17F Series Packages

| Package | AT17F040 | AT17F080 |
|--------------|----------|----------|
| 8-pad LAP | Yes | Yes |
| 20-lead PLCC | Yes | Yes |

1. Pin Configurations

Table 1-1. Pin Descriptions

| | |
|-----------------------------|--|
| DATA ⁽¹⁾ | Three-state DATA Output for Configuration. Open-collector bi-directional pin for programming. |
| CLK ⁽¹⁾ | Clock Input. Used to increment the internal address and bit counter for reading and programming. |
| PAGE_EN ⁽²⁾ | Enable Page Download Mode Input. When PAGE_EN is high the configuration download address space is partitioned into four equal pages. This gives users the ability to easily store and retrieve multiple configuration bitstreams from a single configuration device. This input works in conjunction with the PAGESEL inputs. PAGE_EN must remain low if paging is not desired. When SER_EN is Low (ISP mode) this pin has no effect. |
| PAGESEL[1:0] ⁽²⁾ | Page Select Input. Used to determine which of the four memory pages are targeted during a serial configuration download. The address space for each of the pages is shown in Table 1-2 . When SER_EN is Low (ISP mode) these pins have no effect. |
| RESET/OE ⁽¹⁾ | Output Enable (Active High) and RESET (Active Low) when SER_EN is High. A Low level on RESET/OE resets both the address and bit counters. A High level (with CE Low) enables the data output driver. |
| CE ⁽¹⁾ | Chip Enable Input (Active Low). A Low level (with OE High) allows CLK to increment the address counter and enables the data output driver. A High level on CE disables both the address and bit counters and forces the device into a low-power standby mode. Note that this pin will <i>not</i> enable/disable the device in the 2-wire Serial Programming mode (SER_EN Low). |
| GND | Ground. A 0.2μF decoupling capacitor between V _{CC} and GND is recommended. |
| CEO | Chip Enable Output (when SER_EN is High). This output goes Low when the internal address counter has reached its maximum value. If the PAGE_EN input is set High, the maximum value is the highest address in the selected partition. The PAGESEL[1:0] inputs are used to make the four partition selections. If the PAGE_EN input is set Low, the device is not partitioned and the address maximum value is the highest address in the device (Table 1-2). In a daisy chain of AT17F Series devices, the CEO pin of one device must be connected to the CE input of the next device in the chain. It will stay Low as long as CE is Low and OE is High. It will then follow CE until OE goes Low; thereafter, CEO will stay High until the entire EEPROM is read again. |
| A2 ⁽¹⁾ | Device Selection Input, (when SER_EN Low). The input is used to enable (or chip select) the device during programming (i.e., when SER_EN is Low). Refer to the Atmel AT17F Programming Specification available on the Atmel web site for additional details. |
| READY | Open Collector Reset State Indicator. Driven Low during power-up reset, released when power-up is complete. (recommended 4.7kΩ pull-up on this pin if used). |
| SER_EN ⁽¹⁾ | Serial Enable Input. Must remain High during FPGA configuration operations. Bringing SER_EN Low enables the 2-Wire Serial Programming Mode. For non-ISP applications, SER_EN should be tied to V _{CC} . |
| V _{CC} | Device Power Supply. +3.3V (±10%) |

- Notes: 1. Internal 20KΩ pull-up resistor
2. Internal 30KΩ pull-up resistor

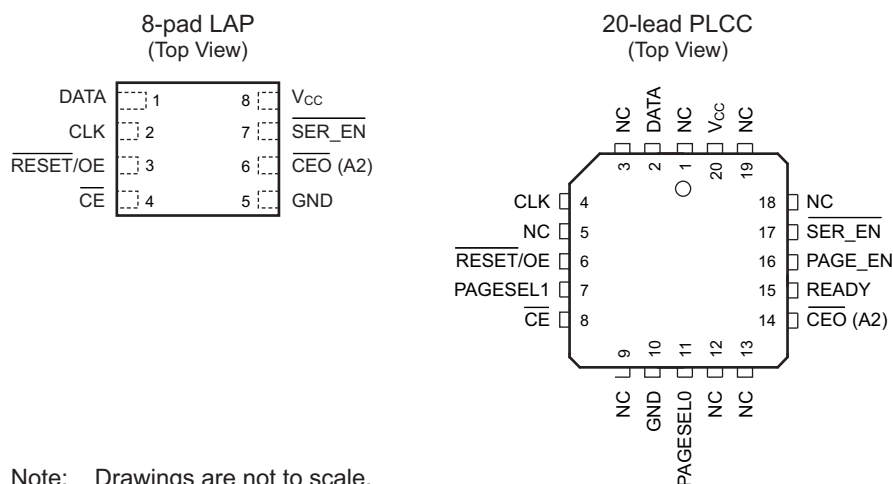

Table 1-2. Address Space PAGESEL[1:0]

| Paging Decodes | AT17F040 (4Mb) | AT17F080 (8Mb) |
|---------------------------|----------------|----------------|
| PAGESEL = 00, PAGE_EN = 1 | 00000 – 0FFFFh | 00000 – 1FFFFh |
| PAGESEL = 01, PAGE_EN = 1 | 10000 – 1FFFFh | 20000 – 3FFFFh |
| PAGESEL = 10, PAGE_EN = 1 | 20000 – 2FFFFh | 40000 – 5FFFFh |
| PAGESEL = 11, PAGE_EN = 1 | 30000 – 3FFFFh | 60000 – 7FFFFh |
| PAGESEL = XX, PAGE_EN = 0 | 00000 – 3FFFFh | 00000 – 7FFFFh |

Table 1-3. Pin Configurations

| Name | I/O | AT17F040 | | AT17F080 | |
|-----------------|-----|-----------|--------------|-----------|--------------|
| | | 8-pad LAP | 20-lead PLCC | 8-pad LAP | 20-lead PLCC |
| DATA | I/O | 1 | 2 | 1 | 2 |
| CLK | I | 2 | 4 | 2 | 4 |

2. Block Diagram

Figure 2-1. Block Diagram

3. Device Description

The control signals for the configuration memory device (\overline{CE} , $\overline{RESET/OE}$ and CLK) interface directly with the FPGA device control signals. All FPGA devices can control the entire configuration process and retrieve data from the configuration device without requiring an external intelligent controller.

The $\overline{RESET/OE}$ and \overline{CE} pins control the tri-state buffer on the DATA output pin and enable the address counter. When $\overline{RESET/OE}$ is driven Low, the configuration device resets its address counter and tri-states its DATA pin. The \overline{CE} pin also controls the output of the AT17F Series Configurator. If \overline{CE} is held High after the $\overline{RESET/OE}$ reset pulse, the counter is disabled and the DATA output pin is tri-stated. When OE is subsequently driven High, the counter and the DATA output pin are enabled. When $\overline{RESET/OE}$ is driven Low again, the address counter is reset and the DATA output pin is tri-stated, regardless of the state of \overline{CE} .

When the configurator has driven out all of its data and \overline{CEO} is driven Low, the device tri-states the DATA pin to avoid contention with other configurators. Upon power-up, the address counter is automatically reset.

4. FPGA Master Serial Mode Summary

The I/O and logic functions of any SRAM-based FPGA are established by a configuration program. The program is loaded either automatically upon power-up or on command, depending on the state of the FPGA mode pins. In Master mode, the FPGA automatically loads the configuration program from an external memory. The AT17F Serial Configuration PROM has been designed for compatibility with the Master Serial mode.

This document discusses the Atmel AT40K, AT40KAL and AT94KAL applications as well as Xilinx applications.

5. Control of Configuration

Most connections between the FPGA device and the AT17F Serial Configurator PROM are simple and self-explanatory.

- The DATA output of the AT17F Series Configurator drives DIN of the FPGA devices.
- The master FPGA CCLK output drives the CLK input of the AT17F Series Configurator.
- The \overline{CEO} output of any AT17F Series Configurator drives the \overline{CE} input of the next Configurator in a cascade chain of configurator devices.
- $\overline{SER_EN}$ must be connected to V_{CC} (except during ISP).
- The READY pin is available as an open-collector indicator of the device's reset status; it is driven Low while the device is in its power-on reset cycle and released (tri-stated) when the cycle is complete.
- PAGE_EN must be held Low if download paging is not desired. The PAGESEL[1:0] inputs must be tied off High or Low. If paging is desired, PAGE_EN must be High and the PAGESEL pins must be set to High or Low such that the desired page is selected (Table 1-2).

6. Cascading Serial Configuration Devices

For multiple FPGAs configured as a daisy-chain or for FPGAs requiring larger configuration memories, cascaded configurators provide additional memory.

After the last bit from the first configurator is read, the clock signal to the configurator asserts its \overline{CEO} output Low and disables its DATA line driver. The second configurator recognizes the Low level on its \overline{CE} input and enables its DATA output.

After configuration is complete, the address counters of all cascaded configurators are reset if the $\overline{RESET/OE}$ on each configurator is driven to its active (Low) level.

If the address counters are not to be reset upon completion, then the $\overline{RESET/OE}$ input can be tied to its inactive (High) level.

7. Programming Mode

The programming mode is entered by bringing $\overline{\text{SER_EN}}$ Low. In this mode, the chip can be programmed by the 2-wire serial bus. The programming is done at V_{CC} supply only. Programming super voltages are generated inside the chip. The AT17F parts are read/write at 3.3V nominal. Refer to the AT17F Programming Specification available on www.atmel.com for more programming details. AT17F devices are supported by the ATDH2200 programming system along with many third party programmers.

8. Standby Mode

The AT17F Series Configurators enter a low-power standby mode whenever $\overline{\text{SER_EN}}$ is High and $\overline{\text{CE}}$ is asserted High. In this mode, the AT17F Configurator consumes less than 1mA of current at 3.3V. The output remains in a high-impedance state regardless of the state of the OE input.

9. Electrical Characteristics

9.1 Absolute Maximum Ratings*

| | |
|--|--------------------------|
| Operating Temperature | -40°C to +85°C |
| Storage Temperature | -65°C to +150°C |
| Voltage on Any Pin with Respect to Ground | -0.1V to $V_{CC} + 0.5V$ |
| Supply Voltage (V_{CC}) | -0.5V to +4.0V |
| Maximum Soldering Temp. (10 sec. @ 1/16in.) | 260°C |
| ESD ($R_{ZAP} = 1.5K$, $C_{ZAP} = 100pF$) | 2000V |

*Notice: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those listed under operating conditions is not implied. Exposure to Absolute Maximum Rating conditions for extended periods of time may affect device reliability.

9.2 Operating Conditions

Table 9-1. Operating Conditions

| Symbol | Description | Min | Max | Units |
|----------|---|------|------|-------|
| V_{CC} | Supply voltage relative to GND -40°C to +85°C | 2.97 | 3.63 | V |

9.3 DC Characteristics

Table 9-2. DC Characteristics

| Symbol | Description | AT17F040 | | AT17F080 | | Units |
|-----------|---|----------|----------|----------|----------|---------|
| | | Min | Max | Min | Max | |
| V_{IH} | High-level Input Voltage | 2.0 | V_{CC} | 2.0 | V_{CC} | V |
| V_{IL} | Low-level Input Voltage | 0 | 0.8 | 0 | 0.8 | V |
| V_{OH} | High-level Output Voltage ($I_{OH} = -2mA$) | 2.4 | | 2.4 | | V |
| V_{OL} | Low-level Output Voltage ($I_{OL} = +3mA$) | | 0.4 | | 0.4 | V |
| I_{CCA} | Supply Current, Active Mode | | 20 | | 20 | mA |
| I_L | Input or Output Leakage Current ($V_{IN} = V_{CC}$ or GND) | -10 | 10 | -10 | 10 | μA |
| I_{CCS} | Supply Current, Standby Mode | | 1 | | 1 | mA |

9.4 AC Characteristics

Table 9-3. AC Characteristics

| Symbol | Description | AT17F040/080 | | | Units |
|-----------------|--|--------------|-----|-----|---------|
| | | Min | Typ | Max | |
| $T_{OE}^{(1)}$ | OE to Data Delay | | | 55 | ns |
| $T_{CE}^{(1)}$ | \overline{CE} to Data Delay | | | 60 | ns |
| $T_{CAC}^{(1)}$ | CLK to Data Delay | | | 30 | ns |
| T_{OH} | Data Hold from \overline{CE} , OE, or CLK | 0 | | | ns |
| $T_{DF}^{(2)}$ | \overline{CE} or OE to Data Float Delay | | | 15 | ns |
| T_{LC} | CLK Low Time | 15 | | | ns |
| T_{HC} | CLK High Time | 15 | | | ns |
| T_{SCE} | \overline{CE} Setup Time to CLK (to guarantee proper counting) | 25 | | | ns |
| T_{HCE} | \overline{CE} Hold Time from CLK (to guarantee proper counting) | 0 | | | ns |
| T_{HOE} | $\overline{RESET/OE}$ Low Time (guarantees counter is reset) | 20 | | | ns |
| F_{MAX} | Maximum Input Clock Frequency $\overline{SEREN} = 0$ | | | 10 | MHz |
| F_{MAX} | Maximum Input Clock Frequency $\overline{SEREN} = 1$ | | | 33 | MHz |
| T_{WR} | Write Cycle Time ⁽³⁾ | | 12 | | μ s |
| T_{EC} | Erase Cycle Time ⁽³⁾ | | 33 | | s |

- Notes:
1. AC test load = 50pF
 2. Float delays are measured with 5pF AC loads. Transition is measured ± 200 mV from steady-state active levels.
 3. See the Atmel AT17F Programming Specification for procedural information.

Table 9-4. AC Characteristics When Cascading

| Symbol | Description | AT17F040 | | AT17F080 | | Units |
|-----------------|---|----------|-----|----------|-----|-------|
| | | Min | Max | Min | Max | |
| $T_{CDF}^{(2)}$ | CLK to Data Float Delay | | 60 | | 50 | ns |
| $T_{OCK}^{(1)}$ | CLK to \overline{CEO} Delay | | 60 | | 55 | ns |
| $T_{OCE}^{(1)}$ | \overline{CE} to \overline{CEO} Delay | | 60 | | 40 | ns |
| $T_{OOE}^{(1)}$ | $\overline{RESET/OE}$ to \overline{CEO} Delay | | 45 | | 35 | ns |
| F_{MAX} | Maximum Input Clock Frequency | | 33 | | 33 | MHz |

- Notes:
1. AC test load = 50pF
 2. Float delays are measured with 5pF AC loads. Transition is measured ± 200 mV from steady-state active levels.

10. Ordering Information

10.1 Ordering Code Detail

10.2 Ordering Information

| Memory Size | Atmel Ordering Code | Lead Finish | Package | Voltage | Operation Range |
|-------------|---------------------|--------------------------------|---------|---------|-------------------------------|
| 4-Mbit | AT17F040-30CU | Sn (Lead-free/Halogen-free) | 8CN4 | 3.3V | Industrial (-40°C to 85°C) |
| | AT17F040-30JU | | 20J | | |
| 8-Mbit | AT17F080-30CU | Sn (Lead-free/Halogen-free) | 8CN4 | 3.3V | Industrial (-40°C to 85°C) |
| | AT17F080-30JU | | 20J | | |

| Package Type | |
|--------------|--|
| 8CN4 | 8-pad, 6mm x 6mm x 1.04mm, Leadless Array Package (LAP) Pin-compatible with 8-lead SOIC/VOIC Packages |
| 20J | 20-lead, Plastic J-leaded Chip Carrier (PLCC) |

11. Packaging Information

11.1 8CN4 — 8-pad LAP

11.2 20J — 20-lead PLCC

COMMON DIMENSIONS
(Unit of Measure = mm)

| SYMBOL | MIN | NOM | MAX | NOTE |
|--------|-----------|-----|--------|--------|
| A | 4.191 | — | 4.572 | |
| A1 | 2.286 | — | 3.048 | |
| A2 | 0.508 | — | — | |
| D | 9.779 | — | 10.033 | |
| D1 | 8.890 | — | 9.042 | Note 2 |
| E | 9.779 | — | 10.033 | |
| E1 | 8.890 | — | 9.042 | Note 2 |
| D2/E2 | 7.366 | — | 8.382 | |
| B | 0.660 | — | 0.813 | |
| B1 | 0.330 | — | 0.533 | |
| e | 1.270 TYP | | | |

- Notes:
1. This package conforms to JEDEC reference MS-018, Variation AA
 2. Dimensions $D1$ and $E1$ do not include mold protrusion. Allowable protrusion is $.010''(0.254\text{mm})$ per side. Dimension $D1$ and $E1$ include mold mismatch and are measured at the extreme material condition at the upper or lower parting line.
 3. Lead coplanarity is $0.004''(0.102\text{mm})$ maximum

REV.

B

12. Revision History

| Doc Rev. | Date | Comments |
|----------|---------|---|
| 3039M | 01/2015 | Removed commercial and 44-lead TQFP package options. Updated the 8CN4 package outline drawing, template, Atmel logos, and disclaimer page. Added an ordering code detail. |
| 3039L | 10/2010 | Changed Endurance from 5,000 to 100,000 and Typ 13 to 33 in AC Characteristics Table. |
| 3039K | 02/2008 | Removed -30JC, -30JI, -30BJC and -30BJI devices from ordering information. |
| 3039J | 03/2006 | Added last-time buy for AT17FXXX-30CC and AT17FXXX-30CI. |

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
