

# SY54017AR

Low Voltage 1.2V/1.8V CML 2:1 MUX  
3.2Gbps, 2.5GHz

## General Description

The SY54017AR is a fully differential, low voltage 1.2V/1.8V CML 2:1 MUX. The SY54017AR can process clock signals as fast as 3.2GHz or data patterns up to 3.2Gbps.

The differential input includes Micrel's unique, 3-pin input termination architecture that interfaces to LVPECL, LVDS or CML differential signals, (AC- or DC-coupled from a 2.5V driver) as small as 100mV (200mV<sub>PP</sub>) without any level-shifting or termination resistor networks in the signal path. For AC-coupled input interface applications, an internal voltage reference is provided to bias the V<sub>T</sub> pin. The outputs are CML, with extremely fast rise/fall times guaranteed to be less than 95ps.

The SY54017AR operates from a 2.5V ±5% core supply and a 1.8V or 1.2V ±5% output supply and is guaranteed over the full industrial temperature range (-40°C to +85°C). The SY54017AR is part of Micrel's high-speed, Precision Edge<sup>®</sup> product line.

Datasheets and support documentation can be found on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

## Functional Block Diagram

Precision Edge<sup>®</sup>

## Features

- 1.2V/1.8V CML 2:1 MUX
- Guaranteed AC performance over temperature and voltage:
  - DC-to- > 3.2Gbps throughput
  - <310ps propagation delay (IN-to-Q)
  - <20ps input-to-input skew
  - <95ps rise/fall times
- Ultra-low jitter design
  - <1ps<sub>RMS</sub> cycle-to-cycle jitter
  - <10ps<sub>PP</sub> total jitter
  - <1ps<sub>RMS</sub> random jitter
  - <10ps<sub>PP</sub> deterministic jitter
- High-speed CML outputs
- 2.5V ±5% , 1.8/1.2V ±5% power supply operation
- Industrial temperature range: -40°C to +85°C
- Available in 16-pin (3mm x 3mm) MLF<sup>®</sup> package

## Applications

- Data Distribution: OC-48, OC-48+FEC
- SONET clock and data distribution
- Fibre Channel clock and data distribution
- Gigabit Ethernet clock and data distribution

## Markets

- Storage
- ATE
- Test and measurement
- Enterprise networking equipment
- High-end servers
- Access
- Metro area network equipment

## Ordering Information<sup>(1)</sup>

| Part Number                  | Package Type | Operating Range | Package Marking                      | Lead Finish       |
|------------------------------|--------------|-----------------|--------------------------------------|-------------------|
| SY54017ARMG                  | MLF-16       | Industrial      | 017A with Pb-Free bar-line indicator | NiPdAu<br>Pb-Free |
| SY54017ARMGTR <sup>(2)</sup> | MLF-16       | Industrial      | 017A with Pb-Free bar-line indicator | NiPdAu<br>Pb-Free |

**Notes:**

1. Contact factory for die availability. Dice are guaranteed at  $T_A = 25^\circ\text{C}$ , DC Electricals only.
2. Tape and Reel.

## Pin Configuration

**16-Pin MLF<sup>®</sup> (MLF-16)**

## Pin Description

| Pin Number  | Pin Name               | Pin Function   |
|-------------|------------------------|--|
| 16,1<br>4,5 | IN0, /IN0<br>IN1, /IN1 | Differential Inputs: These input pairs are the differential signal inputs to the device. They accept differential signals as small as 100mV (200mV <sub>PP</sub> ). Each input pin internally terminates with 50Ω to the VT pin.   |
| 2<br>3      | VT0<br>VT1             | Input Termination Center-Tap: Each side of the differential input pair terminates to a VT pin. This pin provides a center-tap to a termination network for maximum interface flexibility. An internal high impedance resistor divider biases VT to allow input AC-coupling. For AC-coupling, bypass VT with a 0.1μF low ESR capacitor to VCC. See "Interface Applications" subsection and Figure 2a. |
| 15          | SEL                    | This single-ended TTL/CMOS-compatible input selects the inputs to the multiplexer. Note that this input is internally connected to a 25k ohm pull-up resistor and will default to a logic HIGH state if left open.   |
| 7           | VCC                    | Positive Power Supply: Bypass with 0.1uF//0.01uF low ESR capacitors as close to the VCC pin as possible. Supplies input and core circuitry.  |
| 8,13        | VCCO                   | Output Supply: Bypass with 0.1uF//0.01uF low ESR capacitors as close to the VCCO pins as possible. Supplies the output buffer.   |
| 14          | GND,<br>Exposed pad    | Ground: Exposed pad must be connected to a ground plane that is the same potential as the ground pin.  |
| 11,10       | Q, /Q                  | CML Differential Output Pair: Differential buffered copy of the input signal. The output swing is typically 390mV. See "Interface Applications" subsection for termination information.  |

## Truth Table

| SEL | OUTPUT             |
|-----|--------------------|
| 0   | IN0 Input Selected |
| 1   | IN1 Input Selected |

### Absolute Maximum Ratings<sup>(1)</sup>

Supply Voltage ( $V_{CC}$ ) ..... -0.5V to +3.0V  
 Supply Voltage ( $V_{CCO}$ ) ..... -0.5V to +2.7V  
 $V_{CC} - V_{CCO}$  ..... <1.8V  
 $V_{CCO} - V_{CC}$  ..... <0.5V  
 Input Voltage ( $V_{IN}$ ) ..... -0.5V to  $V_{CC}$   
 CML Output Voltage ( $V_{OUT}$ ) ..... 0.6V to  $V_{CCO} + 0.5V$   
 Current ( $V_T$ )  
     Source or sink current on  $V_T$  pin .....  $\pm 100mA$   
 Input Current  
     Source or sink current on (IN, /IN) .....  $\pm 50mA$   
 Maximum operating Junction Temperature ..... 125°C  
 Lead Temperature (soldering, 20sec.) ..... 260°C  
 Storage Temperature ( $T_s$ ) ..... -65°C to +150°C

### Operating Ratings<sup>(2)</sup>

Supply Voltage ( $V_{CC}$ ) ..... 2.375V to 2.625V  
 ( $V_{CCO}$ ) ..... 1.14V to 1.9V  
 Ambient Temperature ( $T_A$ ) ..... -40°C to +85°C  
 Package Thermal Resistance<sup>(3)</sup>  
 MLF<sup>®</sup>  
     Still-air ( $\theta_{JA}$ ) ..... 75°C/W  
     Junction-to-board ( $\psi_{JB}$ ) ..... 33°C/W

### DC Electrical Characteristics<sup>(4)</sup>

$T_A = -40^\circ C$  to  $+85^\circ C$ , unless otherwise stated.

**Notes:**

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential on the PCB.  $\psi_{JB}$  and  $\theta_{JA}$  values are determined for a 4-layer board in still-air number, unless otherwise stated.
4. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

## CML Outputs DC Electrical Characteristics<sup>(5)</sup>

$V_{CC0} = 1.14V$  to  $1.26V$   $R_L = 50\Omega$  to  $V_{CC0}$ ,  $V_{CC0} = 1.7V$  to  $1.9V$ ,  $R_L = 50\Omega$  to  $V_{CC0}$  or  $100\Omega$  across the outputs,  $V_{CC} = 2.375V$  to  $2.625V$ .  $T_A = -40^\circ C$  to  $+85^\circ C$ , unless otherwise stated.

### Notes:

- Input-to-Input skew is the difference in time between both inputs and the output for the same temperature, voltage and transition.
- Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and no skew at the edges at the respective inputs.
- Random jitter is measured with a K28.7 pattern, measured at  $\leq f_{MAX}$ .
- Deterministic jitter is measured at 2.5Gbps with both K28.5 and  $2^{23}-1$  PRBS pattern.
- Cycle-to-cycle jitter definition: the variation period between adjacent cycles over a random sample of adjacent cycle pairs.  $t_{JITTER\_CC} = T_n - T_{n+1}$ , where T is the time between rising edges of the output signal.
- Total jitter definition: with an ideal clock input frequency of  $\leq f_{MAX}$  (device), no more than one output edge in  $10^{12}$  output edges will deviate by more than the specified peak-to-peak jitter value.
- Crosstalk induced jitter is defined as the added jitter that results from signals applied to the adjacent channel. It is measured at the output while applying a similar, differential clock frequencies that are asynchronous with respect to each other at the adjacent input.

## Interface Applications

For Input Interface Applications, see Figures 4a through 4f and for CML Output Termination, see Figure 5a through Figure 5d.

### CML Output Termination with VCCO 1.2V

For VCCO of 1.2V, Figure 5a, terminate the output with 50Ω-to-1.2V, DC coupled, not 100Ω differentially across the outputs.

If AC-coupling is used, Figure 5d, terminate into 50Ω-to-1.2V before the coupling capacitor and then connect to a high value resistor to a reference voltage.

Do not AC couple with internally terminated receiver. For example, 50Ω ANY-IN input. AC-coupling will offset the output voltage by 200mV and this offset voltage will be too low for proper driver operation.

### CML Output Termination with VCCO 1.8V

For VCCO of 1.8V, Figure 5a and Figure 5b, terminate with either 50Ω-to-1.8V or 100Ω differentially across the outputs. AC- or DC-coupling is fine.

### Input AC Coupling

The SY54017AR input can accept AC-coupling from any driver. Bypass VT with a 0.1μF low ESR capacitor to VCC as shown in Figures 4c and 4d. VT has an internal high impedance resistor divider as shown in Figure 2a, to provide a bias voltage for AC-coupling.

## Timing Diagrams

Figure 1a. Propagation Delay

### Typical Characteristics

$V_{CC} = 2.5V$ ,  $V_{CCO} = 1.2V$ ,  $GND = 0V$ ,  $V_{IN} = 100mV$ ,  $R_L = 50\Omega$  to  $1.2V$ ,  $T_A = 25^\circ C$ , unless otherwise stated.

### Functional Characteristics

$V_{CC} = 2.5V$ ,  $V_{CCO} = 1.2V$ ,  $GND = 0V$ ,  $V_{IN} = 400mV$ ,  $R_L = 50\Omega$  to  $1.2V$ , Data Pattern:  $2^{23}-1$ ,  $T_A = 25^\circ C$ , unless otherwise stated.

### Functional Characteristics

$V_{CC} = 2.5V$ ,  $V_{CCO} = 1.2V$ ,  $GND = 0V$ ,  $V_{IN} = 400mV$ ,  $R_L = 50\Omega$  to  $1.2V$ ,  $T_A = 25^\circ C$ , unless otherwise stated.

The information furnished by Micrel in this data sheet is believed to be accurate and reliable. However, no responsibility is assumed by Micrel for its use. Micrel reserves the right to change circuitry and specifications at any time without notification to the customer.

Micrel Products are not designed or authorized for use as components in life support appliances, devices or systems where malfunction of a product can reasonably be expected to result in personal injury. Life support devices or systems are devices or systems that (a) are intended for surgical implant into the body or (b) support or sustain life, and whose failure to perform can be reasonably expected to result in a significant injury to the user. A Purchaser's use or sale of Micrel Products for use in life support appliances, devices or systems is a Purchaser's own risk and Purchaser agrees to fully indemnify Micrel for any damages resulting from such use or sale.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
