**Schematic Symbol**

**Description**

PLEDxUSWxA open LED protectors provide a switching electronic shunt path when an LED in an electronic switching fails as an open circuit. This ensures that the remaining string of LEDs will continue to function if a single LED does not.

The device is designed to enable higher reliability in indoor LED lighting applications such as advertisement lighting and other applications. Additionally, it is molded from white material to make them less visible in the LED fixture and the white molding also reflects more light to improve overall light engine efficiency.

This series is compatible with one, two and three watt LEDs that have a nominal 3V forward characteristic and is available in an SMB, PLEDxUSWxA is available in SMB surface mount package. The DO-214AA (SMB) low profile package is ideal for dense board applications.

**Features & Benefits**

- Ideal for protecting high brightness LED with high operating current at specified condition.
- White compound for better optical appearances
- Fast switching
- Reverse Battery/Power Protection
- Low profile, small foot print standard DO-214AA package

**$V_{BR}$  vs. Junction Temperature**

**LED Interference Test Circuit**

**6 LEDs in Series 50% Duty Cycle 10kHz**

**5 LEDs and 1 PLED in Series 50% Duty Cycle 10kHz**

Note: These two graphs show the current magnitude through the LED string with and without the PLED included. There is no noticeable effect on the LED current magnitude when the PLED is included in the circuit as compared to the LED current magnitude when the PLED is not in the circuit. (The conversion factor for the test measurement in the graphs above is 10mA/mV for the Pearson coil measurement, therefore, the current magnitude in the first figure is 10mA\*8.9 = 89mA, while the second figure is 91mA.)

**PLED in the Off-State 10kHz**

Channel 1: current through LEDs (318 mA)  
Channel 2: voltage across PLED device (4.5 V)

**PLED device zeners and then turns fully on 10kHz**

Channel 1: current through LEDs (346 mA) and PLED device once it is fully turned on 2.5 µsec later  
Channel 2: voltage across PLED device (21.3 V before PLED crowbars with 2 V drop)
