## MIC59P50

---

### 8-Bit Parallel-Input Protected Latched Driver

---

#### General Description

The MIC59P50 parallel-input latched driver is a high-voltage (80V), high-current (500mA) integrated circuit comprised of eight CMOS data latches, a bipolar Darlington transistor driver for each latch, and CMOS control circuitry for the common CLEAR, STROBE, and OUTPUT ENABLE functions. Similar to the MIC5801, additional protection circuitry supplied on this device includes thermal shutdown, undervoltage lockout (UVLO), and overcurrent shutdown.

The bipolar/MOS combination provides an extremely low-power latch with maximum interface flexibility. The MIC59P50 has open-collector outputs capable of sinking 500mA and integral diodes for inductive load transient suppression with a minimum output breakdown voltage rating of 80V above  $V_{EE}$  (50V sustaining). The drivers can be operated with a split supply, where the negative supply is down to -20V and may be paralleled for higher load current capability.

With a 5V logic supply, the MIC59P50 will typically operate at better than 5MHz. With a 12V logic supply, significantly higher speeds are obtained. The CMOS inputs are compatible with standard CMOS, PMOS, and NMOS circuits. TTL circuits may require pull-up resistors.

Each of these eight outputs has an independent overcurrent shutdown at 500mA. Upon current shutdown, the affected channel will turn OFF and the flag will go low until  $V_{DD}$  is cycled or the /ENABLE/RESET pin is pulsed high. Current pulses less than 2 $\mu$ s will not activate overcurrent shutdown. Temperatures above +165°C will shut down the device and activate the open-collector FLAG output at pin 1. The UVLO circuit disables the outputs at low  $V_{DD}$ ; hysteresis of 0.5V is provided.

Datasheets and support documentation are available on Micrel's website at: [www.micrel.com](http://www.micrel.com).

#### Features

- 4.4MHz minimum data input rate
- High-voltage, high-current outputs
- Per-output overcurrent shutdown (500mA typical)
- Undervoltage lockout
- Output fault flag
- Output transient protection diodes
- CMOS, PMOS, NMOS, and TTL-compatible inputs
- Internal pull-down resistors
- Low-power CMOS latches
- Single or split supply operation

# Functional Diagram

## Ordering Information

| Part Number | Temperature Range | Package                           | Pb-Free |
|-------------|-------------------|-----------------------------------|---------|
| MIC59P50YN  | -40°C to +85°C    | 24-Pin Plastic DIP <sup>(1)</sup> | √       |
| MIC59P50YV  | -40°C to +85°C    | 28-Pin PLCC                       | √       |
| MIC59P50YWM | -40°C to +85°C    | 24-Pin Wide SOIC                  | √       |

## Pin Description

| Pin Number<br>PDIP & SOIC | Pin Number<br>PLCC | Pin Name         | Pin Name   |
|---------------------------|--------------------|------------------|--|
| 1                         | 2                  | /FLAG            | Error flag. Open-collector output is low upon overcurrent fault or overtemperature fault. /OE/RESET must be pulled high to reset the flag and fault condition.                                     |
| 2                         | 3                  | CLEAR            | Sets all latches to OFF (open).  |
| 3                         | 4                  | STROBE           | Input strobe pin. Loads output latches when high.  |
| 4-11                      | 5-12               | IN <sub>n</sub>  | Parallel inputs, 1 through 8.  |
| 12                        | 15                 | VEE              | Output ground (substrate). Most negative voltage in the system connects here.  |
| 13                        | 17                 | COMMON           | Transient suppression diodes cathode common pin.   |
| 14-21                     | 18-25              | OUT <sub>n</sub> | Parallel outputs, 8 through 1.   |
| 22                        | 26                 | VDD              | Logic positive supply voltage.   |
| 23                        | 27                 | /OE/RESET        | Output enable reset. When low, outputs are active. When high, outputs are inactive and the flag and outputs are reset from a fault condition. An undervoltage condition emulates a high /OE input. |
| 24                        | 28                 | VSS              | Logic reference (ground) pin.  |

**Absolute Maximum Ratings<sup>(2)</sup>**

**Notes:**

- Exceeding the absolute maximum ratings may damage the device.
- The device is not guaranteed to function outside its operating ratings.
- Each channel VEE connection must be designed to minimize inductance and resistance.
- Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5k $\Omega$  in series with 100pF.
- Specification for packaged product only.
- Operation of these devices with standard TTL or DTL may require the use of appropriate pull-up resistors to ensure a minimum logic "1".

## Electrical Characteristics<sup>(6)</sup> (Continued)

$V_{DD} = 5V$ ;  $T_A = 25^\circ C$ , unless noted.

### Notes:

8. Undervoltage lockout is guaranteed to release device at no more than 4.5V and disable the device at no less than 3.0V input logic voltage.

## Truth Table

| $IN_n$ | Strobe | Clear | Output Enable | $OUT_n$ |     |
|--------|--------|-------|---------------|---------|-----|
|        |        |       |               | t-1     | t   |
| 0      | 1      | 0     | 0             | X       | OFF |
| 1      | 1      | 0     | 0             | X       | ON  |
| X      | X      | 1     | X             | X       | OFF |
| X      | X      | X     | 1             | X       | OFF |
| X      | 0      | 0     | 0             | ON      | ON  |
| X      | 0      | 0     | 0             | OFF     | OFF |

### Note:

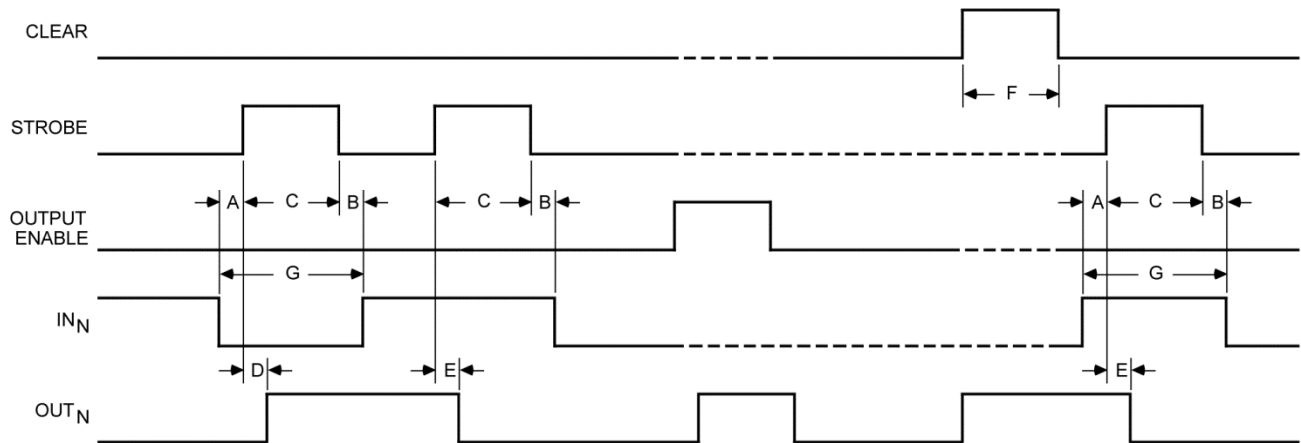

X = Irrelevant

t-1 = Previous output state

t = Present output state

Information present at an input is transferred to its latch when the STROBE is high. A high CLEAR input will set all latches to the output OFF condition regardless of the data or STROBE input levels. A high OUTPUT ENABLE will set all outputs to the OFF condition, regardless of any other input conditions. When the OUTPUT ENABLE is low, the outputs depend on the state of their respective latches. If current shutdown is activated, the OUTPUT ENABLE must be pulsed high to restore operation and reset the FLAG. Overtemperature faults are not latched and require no reset pulse.

## Timing Diagram

### Timing Conditions

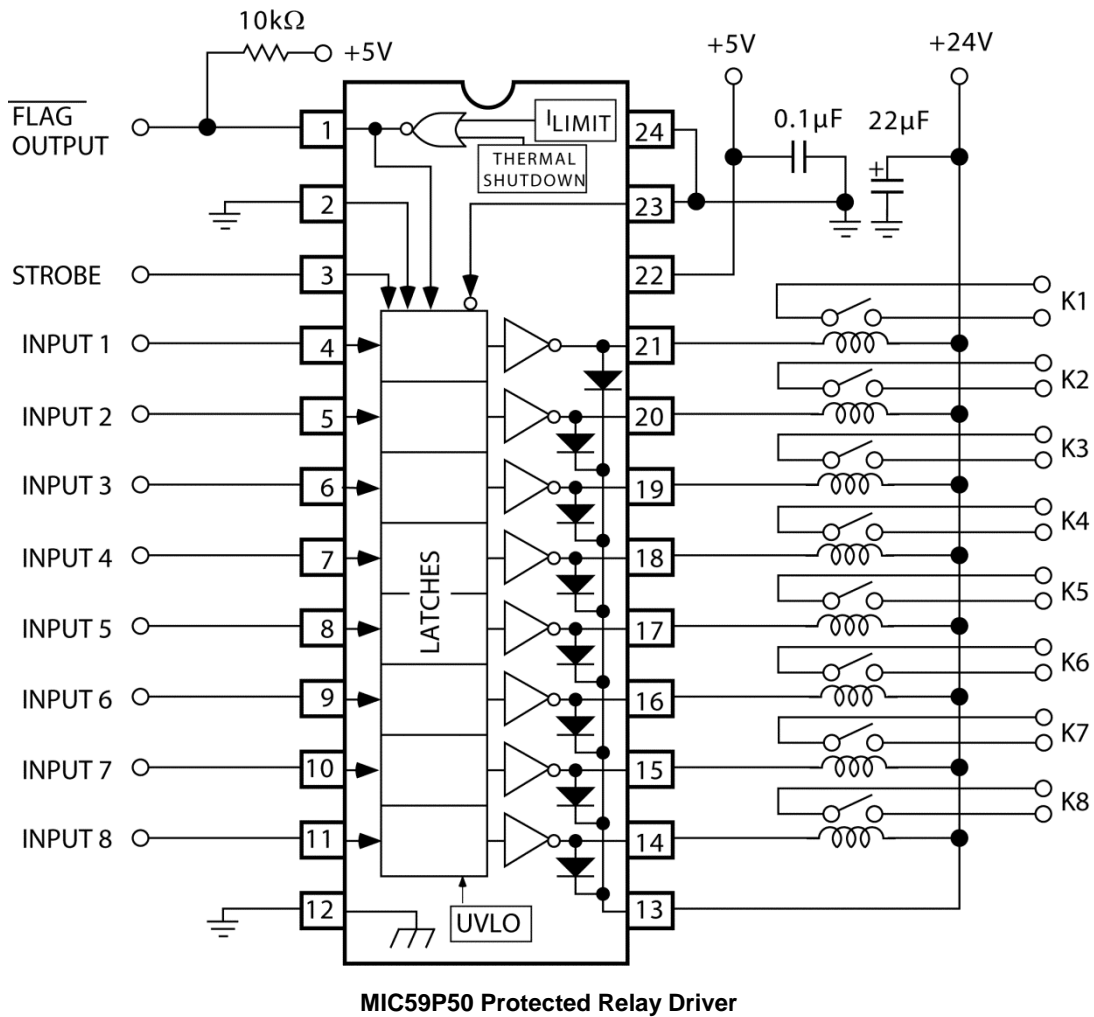

$T_A = +25^\circ\text{C}$ ; Logic levels are  $V_{DD}$  and  $V_{SS}$ ;  $V_{DD} = 5\text{V}$ .

RECOMMENDED LAND PATTERN

**NOTES:**

1. DIMENSIONS ARE IN INCHES [MM].
2. CONTROLLING DIMENSION: INCHES.
3. DIMENSION DOES NOT INCLUDE MOLD FLASH OR PROTRUSIONS, EITHER OF WHICH SHALL NOT EXCEED 0.008 [0.203].
4. LEAD DIMENSION DOES NOT INCLUDE DAMBAR PROTRUSION.
5. MAXIMUM AND MINIMUM SPECIFICATIONS ARE INDICATED AS FOLLOWS : MAX/MIN
6. PACKAGE TOP DIMENSION MAY BE SLIGHTLY SMALLER THAN BOTTOM DIMENSION.

Micrel, Inc. is a leading global manufacturer of IC solutions for the worldwide high performance linear and power, LAN, and timing & communications markets. The Company's products include advanced mixed-signal, analog & power semiconductors; high-performance communication, clock management, MEMs-based clock oscillators & crystal-less clock generators, Ethernet switches, and physical layer transceiver ICs. Company customers include leading manufacturers of enterprise, consumer, industrial, mobile, telecommunications, automotive, and computer products. Corporation headquarters and state-of-the-art wafer fabrication facilities are located in San Jose, CA, with regional sales and support offices and advanced technology design centers situated throughout the Americas, Europe, and Asia. Additionally, the Company maintains an extensive network of distributors and reps worldwide.

Micrel makes no representations or warranties with respect to the accuracy or completeness of the information furnished in this datasheet. This information is not intended as a warranty and Micrel does not assume responsibility for its use. Micrel reserves the right to change circuitry, specifications and descriptions at any time without notice. No license, whether express, implied, arising by estoppel or otherwise, to any intellectual property rights is granted by this document. Except as provided in Micrel's terms and conditions of sale for such products, Micrel assumes no liability whatsoever, and Micrel disclaims any express or implied warranty relating to the sale and/or use of Micrel products including liability or warranties relating to fitness for a particular purpose, merchantability, or infringement of any patent, copyright, or other intellectual property right.

Micrel Products are not designed or authorized for use as components in life support appliances, devices or systems where malfunction of a product can reasonably be expected to result in personal injury. Life support devices or systems are devices or systems that (a) are intended for surgical implant into the body or (b) support or sustain life, and whose failure to perform can be reasonably expected to result in a significant injury to the user. A Purchaser's use or sale of Micrel Products for use in life support appliances, devices or systems is a Purchaser's own risk and Purchaser agrees to fully indemnify Micrel for any damages resulting from such use or sale.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
